7.3: Institutional Distinctiveness

The College has a total of **17 research laboratories** which are as follows:

1. Anti-mycobacterial Drug Discovery Laboratory
2. Chemical Biology Laboratory
3. Environmental Monitoring and Assessment Laboratory
4. Polymer Research Laboratory
5. Research Laboratory of Inorganic Chemistry
6. Material Science Laboratory
7. Mathematics Research Centre Laboratory
8. Sensing Materials and Devices Laboratory
9. Chandra Computational Physics Lab
10. Insect Vector and Pests Laboratory
11. Microbial Technology Laboratory
12. Ciliate Biology Laboratory
13. Embedded System and Robotics laboratory
14. Synthesis & In-Silico Drug Design Laboratory
15. Th!nk Laboratory: CUBE Laboratory in collaboration with HBCSE, Tata Institute of Fundamental Research, Mumbai
16. Mushroom Research and Skill Development Centre (MRSDC)
17. Zebrafish Culture Facility

BOARD OF RESEARCH STUDIES (SCIENCE)
(FACULTY OF SCIENCE)
UNIVERSITY OF DELHI

Ref. No. Ref. : FOS-I/114/Ph.D/ 8 20- Dated : 26/04/19

With reference to his/her application for admission to Ph.D./Proramme in ACBR

Mr./Mrs./Miss Mr. Harekrushna Jena is hereby informed that the Board of Research Studies for Science in its meeting held on 06.04.2019 has provisionally selected him/her for registration to Ph.D. Programme and has assigned him/her to ACBR Department under the supervision of Prof./Dr. Dr. Gagan Dhawan on the following proposed area of research "Design and Development of Synthetic Vectors for Delivery of Biomolecules"

1. His/her admission to Ph.D. Programme shall be provisional and the same shall be confirmed only when he/she has qualified in the course work and has completed any other requirements, such as passing in the oral test etc., to be laid down by the Departmental Research Committee in each case.
2. In case the candidate is employed, provisional admission to Ph.D. would be allowed only if leave requirement is fulfilled.
3. At the end of six months, the Advisory Committee shall access the progress of the candidate through a comprehensive written and oral examination/presentation.
4. If the Advisory Committee is satisfied, it would recommend confirmation of the provisional admission previously granted and the Board, if satisfied, would confirm the provisional admission.
5. If the overall performance in respect of the above is not found to be satisfactory, the candidate shall be required to repeat the same within the next six months when his/her performance would be re-examined. If the performance is again found not to be satisfactory the Advisory Committee may recommend either a further change to improve his/her performance or cancellation of the provisional admission granted to him/her.

He/she is further informed that the date of his/her joining will be treated from the date of submission of fees in this University. A blank form for joining Report is enclosed herewith which should be returned to this office duly filled in and signed by his/her supervisor and Head of the Department to enable him/her to deposit the prescribed supervision and other fees on online portal in the concerned deptt, university of delhi within 15 days from the date of issue of this letter i.e. 13/05/19 failing which his/her selection to the course shall be deemed as cancelled.

His/her registratsion is governed by the provisions of Ordinance VI-B relating to Doctorate of Philosophy (Ph.D.) of this University,.

In case the candidate has passed the M.Sc. Examination from a University other than Delhi University, he/she is required to be enrolled as student of this University. An enrolment form is enclosed which must be sent to Academic Branch duly filled and signed by the Head of the Department immediately after joining the Ph.D. Course. The original certificate may also be produced.

Prof. C.S. Lalitha
Chairperson

No.BRS(MS)/248/2021/
Dated: February 22, 2021

MEMORANDUM

With reference to his application dated 22.01.2021 **Mr. Gurudatt Rao Ambedkar** is hereby informed that the Board of Research Studies (Mathematical Sciences) at its meeting held on February 19, 2021 has approved his case for provisional admission to the Ph.D. Course under **Category-1(4) of Ordinance VI** in the **Department of Mathematics** University of Delhi, w.e.f. the date of his joining under the supervision of **Dr. Chaman Singh AND College, University of Delhi** with the following research topic:

"Optimization Problems for Sustainable Development"

He should note that his provisional admission is subject to:

I. His successful completion of Course Work to be assigned by the Departmental Research Committee within initial one or two semesters.
II. Completion of other formalities like defence of the thesis topic in a departmental seminar and

He is advised to contact his supervisor(s) for further instructions and guidance in this regard.

He is required to complete the following formalities of provisional admission within four weeks from the date of dispatch of this letter failing which his admission shall be treated as cancelled without any further notice:

(a) To submit the following certificates in original:

(i) Undergraduate and postgraduate (qualifying) Degrees/ Certificates.
(ii) Mark-sheets of undergraduate and postgraduate (qualifying) examinations.
(iii) Matriculation/Higher Secondary/Secondary School Certificate for verification of date of birth.
(iv) Certificate, in the case of SC/ST/OBC/PH category
(v) Fellowship/Scholarship/UGC-NET award letter.

(b) After the submission/verification of the above documents/ certificates, to obtain a slip from the BRS (MS) office for depositing the required fees with the University through online and submit a copy of the fee receipt paid along with the joining report..

He may further note that,

(i) Teachers from a Department/Constituent College of the University of Delhi are exempted from payment of tuition fees on production of employment certificate.

(ii) The Ph.D. students have to pay fees annually in advance and if they fail to do so their names will be struck off from the rolls.

UNIVERSITY OF DELHI

FACULTY OF SCIENCE

PROFESSOR I. USHA RAO
Dean

For selection of candidates in Projects (6), following is the composition of the Committee:

1. An eminent scholar to be nominated by the Vice-Chancellor.(DRC member as an outside experts)
2. Head of the Department.
3. One professor and one Reader from the parent Department to be nominated by the Vice-Chancellor.
4. PI and Co-PI of the Project or any other member as per the requirement of the funding agency.

(The Selection Committee should clearly mention that the selected candidates be considered for registration by the DRC).

The candidates considered for registration have to do the course work available at the University Department.

Your recognition as a supervisor is also subject to fulfilling the following conditions:

1. Having a project from the funding agency for the duration of at least 2 years.
2. Undertaking from the Principal of the college that sufficient laboratory space will be provided to the students/supervisor to carry out the research work.
3. Any student appointed in the project will not be automatically considered for registration unless or otherwise recommended by the duly constituted committee (6).

The registration of the student and other research activities will be as per the guidelines prescribed under the revised ordinance VI-B.

Yours faithfully,

I. Usha Rao

FACULTY OF SCIENCE

PROFESSOR I. USHA RAO
Dean

Ref. No. A.R.(Sc.)/2011/ 30536 Dated: 21.3.2011

Dr. Sunita Hooda,
Associate Professor,
Department of Chemistry,
Acharya Narendra Dev College,
Govindpuri, Kalkaji,
New Delhi.

Dear Dr. Hooda,

The Chairperson of BRS (Science) has approved the recommendations of the Inspection Committee for your recognition as a Supervisor to guide Ph.D. students of the University in your subject. This is only one time recognition for taking maximum of two Ph.D. students. Any further recognition will be granted only after review by the duly constituted Inspection Committee of the BRS. The students may be provided guidance in your College as well as in the concerned Department of the University.

It may be mentioned here that the registration of the candidate for Ph.D. Programme will be done strictly in accordance with the guidelines prescribed under Ordinance VI-B duly notified by the Registrar vide letter no. SPA/R/2008/2655 dated 28/4/2008, (copy enclosed). Additional guidelines for the selection of candidates in the Projects for consideration for registration are also enclosed (Dean, Research letter no. R/194 dated 31/7/2008).

Students who are in receipt of any of the following types of fellowships/stipends will only be considered for registration by the BRS.

1. University Teaching Assistantships.
2. JRF through UGC/NET and CSIR/NET.
3. Fellowships of CSIR/ICAR/ICSSR/ICHR/ICMR/DBT/DST or from any other recognized Government institutions/organizations.
4. Rajiv Gandhi Fellowships for SC/ST from UGC.
5. SAP Fellowships from UGC.
6. Project JRF/Project Assistant.
7. Candidates with UGC (Non -NET) fellowships Rs. 5,000 fellowship under the new scheme.

Sripoorna is hereby informed that the Board of Research Studies for Science in its meeting held on 09.08.2016 has provisionally selected him/her for registration to Ph.D. Programme and has assigned him/her to Zoology Department under the supervision of Prof./Dr. Dr. Seema Makhija & Dr. Ravi Toteja on the following proposed area of research

Ciliates as a Cellular Tool to assess Heavy Metal Toxicity

1. His/her admission to Ph.D. Programme shall be provisional and the same shall be confirmed only when he/she has qualified in the course work and has completed any other requirements, such as passing in the oral test etc., to be laid down by the Departmental Research Committee in each case.

2. In case the candidate is employed, provisional admission to Ph.D. would be allowed only if leave requirement is fulfilled.

3. At the end of six months, the Advisory Committee shall access the progress of the candidate through a comprehensive written and oral examination/presentation.

4. If the Advisory Committee is satisfied, it would recommend confirmation of the provisional admission previously granted and the Board, if satisfied, would confirm the provisional admission.

5. If the overall performance in respect of the above is not found to be satisfactory, the candidate shall be required to repeat the same within the next six months when his/her performance would be re-examined. If the performance is again found not to be satisfactory the Advisory Committee may recommend either a further chance to improve his/her performance or cancellation of the provisional admission granted to him/her.

He/she is further informed that the date of his/her joining will be treated from the date of submission of fees in this University. A blank form for joining Report is enclosed herewith which should be returned to this office duly filled in and signed by his/her supervisor and Head of the Department to enable him/her to deposit the prescribed supervision and other fees with the Cashier, Delhi University, within 15 days from the date of issue of this letter i.e. 15.09.16 failing which his/her selection to the course shall be deemed as cancelled.

His/her registration is governed by the provisions of Ordinance VI-B relating to Doctorate of Philosophy (Ph.D.) of this University.

In case the candidate has passed the M.Sc. Examination form a University other than Delhi University, he/she is required to be enrolled as student of this University. An enrolment form is enclosed which must be sent to Academic Branch duly filled and signed by the Head of the Department immediately after joining the Ph.D. Course. The original certificate may also be produced.

Encl.: As above.

FACULTY OF SCIENCE
UNIVERSITY OF DELHI
DELHI - 110007

Sf·I/9588

Dated: 27.10.2009

Dr. Monisha Khanna
Department of Zoology
A.N.D College
Govind Puri, Kalkaji
New Delhi-110019.

Dear Dr. Monisha Khanna,

The Vice–Chancellor has been pleased to approve the recommendations of the BRS (Science) for your recognition as a Supervisor to guide Ph.D students of the University in your subject. This is only one time recognition for taking maximum of two Ph.D students. Any further recognition will be granted only after review by the duly constituted Inspection Committee of the BRS. The students may be provided guidance in your College as well as in the concerned Department of the University.

It may be mentioned here that the registration of the candidate for Ph.D Programme will be done strictly in accordance with the guidelines prescribed under Ordinance VI-B duly notified by the Registrar vide letter no. SPA/R/2008/2655 dated 28/4/2008, (copy enclosed). Additional guidelines for the selection of candidates in the Projects for consideration for registration are also enclosed (Dean, Research letter no. R/194 dated 30/6/2008).

Students who are in receipt of any of the following types of fellowships/stipends will only be considered for registration by the BRS.

1. University Teaching Assistantships.
2. JRF through UGC/NET and CSIR/NET.
3. Fellowships of CSIR/ICAR/ICSSR/ICHR/ICMR/DBT/DST or from any other recognized Government institutions/organizations.
4. Rajiv Gandhi Fellowships for SC/ST from UGC .
5. SAP Fellowships from UGC.
6. Project JRF/Project Assistant.
7. Candidates with UGC (Non -NET) fellowships Rs. 5,000 fellowship under the new scheme.

For selection of candidates in Projects (6), following is the composition of the Committee:

1. An eminent scholar to be nominated by the Vice-Chancellor.(DRC member as an outside experts)
2. Head of the Department.
3. One professor and one Reader from the parent Department to be nominated by the Vice-Chancellor.
4. PI and Co-PI of the Project or any other member as per the requirement of the funding agency.

Contd...P/2

(The Selection Committee should clearly mention that the selected candidates be considered for registration by the DRC).

The candidates considered for registration have to do the course work available at the University Department.

Your recognition as a supervisor is also subject to fulfilling the following conditions:

1. Having a project from the funding agency for the duration of at least 2 years.
2. Undertaking from the Principal of the college that sufficient laboratory space will be provided to the students/supervisor to carry out the research work.
3. Any student appointed in the project will not be automatically considered for registration unless or otherwise recommended by the duly constituted committee (6).

The registration of the student and other research activities will be as per the guidelines prescribed under the revised ordinance VI-B.

Yours Faithfully

Dean (Faculty of Science)

UNIVERSITY OF DELHI SOUTH CAMPUS
(FACULTY OF INTER-DISCIPLINARY AND APPLIED SCIENCE)

Ref.no. SF-I/Ph.D./2022/ 1407 Dated: 10th January, 2022

With reference to his/her application for admission to the Ph.D. Course in Electronic Science **Mr. Sandeep Singhania** is hereby informed that the Board of Research Studies at its meeting held on 04th **January, 2022** has provisionally selected his/her for registration to the Ph.D. Course and has assigned his/her to **Electronic Science** Department under supervision of **Prof. Amit Garg** on the following title of thesis:

"ROLE OF FUNCTIONAL GROUP IN GAS SENSING OF 2D MATERIALS."

1. His/her admission to Ph.D. Course shall be provisional and the same shall be confirmed only when he/she has qualified in the course work and has completed other requirements such as passing in the oral test etc. to be laid down by the Departmental Research Committee in each case.

2. At the end of the six months, the Advisory Committee shall assess the progress after comprehensive written and/or oral examination.

3. If the Advisory Committee is satisfied, it would recommend confirmation of the provisional admission previously granted and the Board, if satisfied, would confirm the provisional admission.

4. If the overall performance in respect of the above is found not to be satisfactory, he/she shall be required to repeat the same within the next six months when his/her performance would be re-examined. If the performance is again found not to be satisfactory, the Advisory Committee may recommend either a further chance to improve his/her performance or cancellation of the provisional admission granted to him/her.

He/She is further informed that the date of his/her joining and starting research in the Department will be his/her date of registration. He/She is, therefore, requested to intimate this office the date from which he/she started his/her research in the Department. A blank form for Joining Report is enclosed herewith which should be returned to this office duly filled in and signed by his/her supervisor and Head of the Department to enable him/her to deposit the prescribed supervision and other fees with the Cashier, Delhi University, within one week from the date of issue of this letter till 20th **January 2022** failing which his/her selection to the course shall be deemed as cancelled.

His/Her registration is governed by the provisions of Ordinance VI-B relating to Doctorate of Philosophy (Ph.D.) of this University (a copy is enclosed).

In case he/she passed the M.Sc. Examination from a University other than Delhi University, he/she is required to be enrolled as a student of this University. An enrollment form is enclosed, which must be sent to this office duly filled and signed by the Head of the Department immediately after joining the Ph.D. Course. The original certificates may also be produced.

Ph.D. thesis Submitted/Awarded by the Research Scholars

S.No	Name of the Research scholar	Mentor	Title of the thesis	Year of Award/ Submission
1	Dr Renu Solanki	Dr Monisha Khanna	Isolation and characterization of actinomycetes and analysis of their antimicrobial potential	Ph.D. awarded in 2014
2	Dr Anuja	Dr Vibha Gaur	Requirement Engineering Process for Multi-Agent Systems	Ph.D. awarded in 2014
3	Dr Neeraj Kumar Sharma	Dr Vibha Gaur	Agent-Mediated Attack-Resilient Reputation System For e-Commerce	Ph.D. awarded in 2014
4	Dr Radhika Warikoo	Dr Sarita Kumar	Studies on the Efficacy of Mexican Prickly Poppy, Argemone mexicana (Papaveraceae) as the Potential Control Agent of an Indian Strain of Dengue vector, Aedes aegypti L. (Diptera: Culicidae)	Ph.D. awarded in 2015
5	Dr Monica Mishra	Dr Sarita Kumar	Behavioural Implications of Host-Parasite Interactions in *Helicoverpa armigera*	Ph.D. awarded in 2016
6	Dr Payal Das	Dr Monisha Khanna	Microbial extracellular enzymes: Purification, Molecular characterization and Applications	Ph.D. awarded in 2017
7	Dr Eniyan Kandasamy	Dr Urmi Bajpai	Development of one-pot assay for screening multi-target inhibitors of *Mur* enzymes of *Mycobacterium tuberculosis*	Ph.D. awarded in 2018
8	Dr Rama Kanta Choudhury	Dr Chandra Kanta Samal	Implementation of reliable path planning technique for mobile robots in presence of obstacles	Ph.D. awarded in 2018
9	Dr Aarti Sharma	Dr Sarita Kumar	Synthesis, Evaluation and Characterization of Phyto-mediated Silver Nano composites against Indian Strain of Dengue Vector, *Aedes aegypti* L. (Diptera: Culicidae	Ph.D. awarded in 2019
10	Dr Rajiv Kumar Shukla	Dr Sarita Kumar	Isolation, Identification and Biochemical	Ph.D. awarded in 2019

			Characterization of Bacteria as Potential Biological Control	
11	Dr Shyam Lal	Dr Sunita Hooda	Synthesis, characterization, kinetics and biological application of some metal complexes, June 2018.	Ph.D. awarded in 2019
12	Dr Rakhi Saxena	Dr Sharanjit Kaur	Hierarchical Graph Decomposition for Scalable Network Analysis	Ph.D. awarded in 2019
13	Ms S. Sripoorna	Prof. Seema Makhija Prof.Ravi Toteja	Ciliates as cellular tool to assess heavy metal toxicity	Ph.D. Thesis Submitted in February, 2020
14	Mr Shani Kumar	Dr Amit Garg	Fabrication of Graphene Oxide Membranes for their Potential use in water Purification Applications Date of submission:	Ph.D. Thesis Submitted in December, 2020
15	Mr Prateek Kumar	Prof. Monisha Khanna Kapur	Structural analyses of bioactive compounds from *Streptomyces* spp. and identification of their biosynthetic gene clusters Date of submission: December 16, 2020	Ph.D. Thesis Submitted in December, 2020.
16	Ms Roopa Rani Samal	Prof. Sarita Kumar	Characterization of Mechanisms Involved in the Development of Acetamiprid and Deltamethrin Resistance in an Indian Strain of *Aedes aegypti* L. Date of Submission: March 16, 2021	Ph.D. Thesis Submitted in March, 2021
17	Ms Jeeva S. Abhraham	Prof. Seema Makhija	Taxonomy, Phylogeny and Molecular Systematics of Ciliates from Delhi, India Date of Submission:	Ph.D. Thesis Submitted in March, 2021

ACHARYA NARENDRA DEV COLLEGE

Preparing for the future…

आचार्य नरेंद्र देव कॉलेज

तैयारी भविष्य की…

University of Delhi | NAAC accredited: A Grade
दिल्ली विश्वविद्यालय | नैक मान्यता प्राप्त 'ए' ग्रेड

Virtual lab at ANDC (V-Lab@ANDC)

Patron: Prof. Ravi Toteja (Officiating Principal)
Coordinator: Prof. Seema Makhija (Zoology), Dr SumitSahni and Dr Vineet K Singh (Botany)
Conveners: Dr Sanjeeta Rani (Physics), Prof. SharanjitKaur (Computer Science), Dr Anita Narang (Botany), Dr Neeti Mishra (Chemistry)
Project Leads: Mr Ayush Mishra, andMr Vaibhav Thapliyal, B.Sc (H) Physics II Year

Unnatural circumstances need innovative solutions and COVID-19 brings such situations for academics where normal offline education came to a halt. Theoretical concepts were being delivered to students online but for understanding practical concepts a hands–on approach was missing. Acharya Narendra Dev College under the able vision of its principal, Prof. Ravi Toteja conceptualized the idea of Virtual lab (V-Lab) to provide remote access of various labs to the undergraduate science students through the internet, and thus became the first college in the University of Delhi to start V-Lab at its campus.

Virtual lab allows the student to understand, learn and perform the practical on their own remotely with a click of the mouse. It provides a complete Learning Management System (LMS) where students can avail the various learning, including additional web-resources, video-lectures, animated demonstrations and self-evaluation. Web enabled experiments have been designed for remote operation and viewing so as to enthuse the curiosity and innovation into students. This would help them in learning basic and advanced concepts through remote experimentation.

The course structure of various labs and experiments available on V-Lab@ANDC is futuristic, following a four quadrant model for e-content, and is developed considering the National Education Policy (NEP)-2020. V-Lab@ANDC website is created and maintained by our own students for four domains i.e. Biological Science, Chemical Science, Electronics and Physical Science which include seven departments i.e. Biomedical Science, Botany, Chemistry, Computer Science, Electronics, Physics and Zoology.

Although the V-Lab@ANDC was initiated to tackle the COVID related problems in teaching and learning process but is not confined to it. Students now can perform their experiments 24 X 7, on even sophisticated and expensive instruments, multiple times and at their ease without wasting the resources and can even generate the measured data for at least a few experiments.

Through V-Lab@ANDC we are proving the ideology of our college 'Preparing for the future' by exploring and innovating 'Beyond the classroom' or rather 'Beyond the Practical Lab'.

The lab is developed under four domains:

ORDER

Sanction of the President is hereby accorded under Rule 18 of the Delegation of Financial Power Rules, 1978 for the financial support for strengthening of Life Science and Biotechnology Education and Training at undergraduate level under **Star Status Award** to **Acharya Narendra Dev College, University of Delhi, Delhi - 110019** at a total project cost of **Rs. 219.00 lakhs (Rupees two crore and nineteen lakhs only)** for **three years** as per budget details are given below:-

Amount (Rs. In lakhs)

Head	**1st Year rel**	**2nd Year rel**	**3rd Year rel**	**Total**
Non-Recurring Equipment @ Rs. 15.00 lakhs per dept. (Biomedical Science, Botany, Chemistry, Computer Science, Electronics, Physics and Zoology)	105.00	0.00	0.00	**105.00**
Recurring to all seven depts. @ Rs. 5.00 lakhs per year (Biomedical Science, Botany, Chemistry, Computer Science, Electronics, Physics and Zoology)	35.00	35.00	35.00	**105.00**
Travel Grant (Mentoring, Monitoring and Site Visit) @ Rs. 2.00 lakhs per year	2.00	2.00	2.00	**6.00**
Contingency @ Rs. 1.00 lakh per year	1.00	1.00	1.00	**3.00**
Total:	**143.00**	**38.00**	**38.00**	**219.0**

2. **Dr. Ravi Toteja, Principal, Acharya Narendra Dev College, University of Delhi, Delhi - 110019** will be the coordinator for this programme and will submit utilization certificate and statement of expenditure duly signed by him, finance/accounts officer of college and head of college in duplicate at the end of financial year.

3. The college is required to implement the programme as per the terms and conditions given in **Annexure-I**.

4. As per "Rule 236 (1) of GFR 2017", the Account of all Grantee Institution or Organisations shall be open to inspection by the sanctioning authority and audit, both by the Comptroller and Auditor General of India under the provision of CAG(DPC) Act 1971 and internal audit by the Principal Accounts Office of the Ministry or Department, whenever the institute or Organisation is called upon to do so.

5. Non-recurring grant shall be utilized within 18 months of their release.

6. The institute/agency will keep the whole of the grant in a bank account earning interest, and the interest so earned should be reported to DBT in the utilization certificate and statement of expenditure. **The interest so earned should be refunded to the consolidated funds of India through Bharat Kosh (NTRP) Portal.**

7. The tenure of on-going "Strengthening Component" will be terminated one day prior to the date of sanction order of Star Status. The college will not book any expenditure from budget under "Strengthening Component" after the date of completion.

Continue../2/-

8. To maintain continuity of the scheme and avoid gap between the two sanctions i.e the sanction order of the Star Status and the on-going strengthening component, the final settlement of accounts for strengthening component scheme must be initiated, and college should submit completion report and audited financial documents within 6 months, otherwise the second year grant of Star Status will not be released.

9. Continuation of the project beyond 30.09.2021 will be subject to the appraisal and approval of the relevant scheme for the continuation beyond 30.9.2021

10. After completion of the project period, the retention of equipment(s) purchased out of the project grant by the private agencies /NGOs is not allowed as per the prevailing Govt. of India instructions. Hence, the Pvt. Institutes/ NGOs involved in the instant project shall abide by the instructions issued/ to be issued by the Department in this regard from time to time.

11. The expenditure involved is debitable to:

Demand No. 89	Department of Biotechnology
3425	Other Scientific Research (Major Head)
60	Others (Sub Major Head)
60.200	Assistance to Other Scientific Bodies (Minor Head)
29	Biotechnology Research and Development, Human Resource Development, Research Resources and facilities
29.17	Assistance for Research and Development
29.17.31	Grants-in-Aid General for the year 2021-22

Demand No. 89	Department of Biotechnology
3425	Other Scientific Research (Major Head)

Dated: 27/08/2021

ORDER

In continuation of this department's sanction order of even no. dated.27.08.2021 sanction of the President is hereby accorded under Rule 18, of the delegation of Financial Power Rules, 1978 to the release of an amount of **Rs. 105.00 lakhs (Rupees one hundred and five lakhs only)** to **Acharya Narendra Dev College, University of Delhi, Delhi - 110019** being **first year release under non-recurring head** for the implementation of the project for strengthening of Life Science and Biotechnology Education and Training at undergraduate level under **Star Status Award** for financial year 2021-22, as per details given below:-

(Rs. in lakhs)

Head	**Amount**
Non-Recurring Equipment @ Rs. 15.00 lakhs per depts. (Biomedical Science, Botany, Chemistry, Computer Science, Electronics, Physics and Zoology)	**105.00**

2. The amount of **Rs. 105.00 lakhs (Rupees one hundred and five lakhs only)** will be directly credited by the Pay and Accounts Officer, DBT and disbursed to **The Principal, Acharya Narendra Dev College, University of Delhi, Delhi - 110019** through electronic transfer/RTGS as per the details are given below:-

Name of the Bank	Punjab National Bank
Branch Name & Address	Krishna Market, Kalkaji, New Delhi
Account No.	0156000100546062
Nature of Account	Savings
IFSC Code	PUNB0015600
MICR Code	110024052

3. As per "Rule 236 (1) of GFR 2017", the Account of all Grantee Institution or Organisations shall be open to inspection by the sanctioning authority and audit, both by the Comptroller and Auditor General of India under the provision of CAG(DPC) Act 1971 and internal audit by the Principal Accounts Office of the Ministry or Department, whenever the institute or Organisation is called upon to do so.

4. The terms and conditions of the grant remain unchanged.

5. Non-recurring grant shall be utilized within 18 months of their release.

6. The institute/agency will keep the whole of the grant in a bank account earning interest, and the interest so earned should be reported to DBT in the utilization certificate and statement of expenditure. **The interest so earned should be refunded to the consolidated funds of India through Bharat Kosh (NTRP) Portal.**

7. The tenure of on-going "Strengthening Component" will be terminated one day prior to the date of sanction order of Star Status.

8. To maintain continuity of the scheme and avoid gap between the two sanctions i.e the sanction order of the Star Status and the on-going strengthening component, the settlement of strengthening component scheme part will be initiated within 6 months, otherwise the second year grant of Star Status will not be released.

9. Interest earned amount i.e. **Rs 52,922/-** has been submitted in C.F.I, receipt is also attached.

10. After completion of the project period, the retention of equipment(s) purchased out of the project grant by the private agencies /NGOs is not allowed as per the prevailing Govt. of India instructions. Hence, the Pvt. Institutes/ NGOs involved in the instant project shall abide by the instructions issued/ to be issued by the Department in this regard from time to time.

11. Continuation of the project beyond 30.09.2021 will be subject to the appraisal and approval of the relevant scheme for the continuation beyond 30.9.2021.

12. **The Principal, Acharya Narendra Dev College, University of Delhi, Delhi - 110019** will submit the Statement of Expenditure (SE) and audited Utilization Certificate (UC) of expenditure in respect of above mentioned amount.

13. No UC pertaining to this programme is pending with the college; UC for the grant released during last financial year is enclosed herewith.

14. The expenditure involved is debitable to:

Demand No. 89	Department of Biotechnology
3425	Other Scientific Research (Major Head)
60	Others (Sub Major Head)
60.200	Assistance to Other Scientific Bodies (Minor Head)
29	Biotechnology Research and Development, Human Resource Development, Research Resources and facilities
29.17	Assistance for Research and Development
29.17.35	Grants-in-Creation of Capital Assets FY-2021-22

15. This issues under powers delegated to this Dept. and with the concurrence of IFD vide their **San No. 102/IFD/SAN/955/2021-22 dated:26.08.2021**

16. This sanction order has been noted at serial No…**8**….in the register of grants.

Government of India
Ministry of Science & Technology
Department of Biotechnology

Block No. 2, 6-8th Floor
CGO Complex, Lodi Road
New Delhi-110003
Dated: 27/08/2021

ORDER

In continuation of this Department's sanction order of even no. dated.27.08.2021 sanction of the President is hereby accorded under Rule 18, of the delegation of Financial Power Rules, 1978 to the release of an amount of **Rs. 38.00 lakhs (Rupees thirty eight lakhs only)** to **Acharya Narendra Dev College, University of Delhi, Delhi - 110019** being 1st year release under recurring head for the implementation of the project for strengthening of Life Science and Biotechnology Education and Training at undergraduate level under **Star Status Award** for the financial year 2021-22 as per details given below:-

(Rs. In lakhs)

Head	**Amount**
Recurring to all seven depts. @ Rs. 5.00 lakhs per year / per dept. (Biomedical Science, Botany, Chemistry, Computer Science, Electronics, Physics and Zoology)	35.00
Travel Grant (Mentoring, Monitoring and Site Visit) @ Rs. 2.00 lakhs per year	2.00
Contingency @ Rs. 1.00 lakh per year	1.00
Total:	**38.00**

2. The amount of **Rs. 38.00 lakhs (Rupees thirty eight lakhs only)** will be directly credited by the Pay and Accounts Officer, DBT and disbursed to **The Principal, Acharya Narendra Dev College, University of Delhi, Delhi - 110019** through electronic transfer/RTGS as per the details are given below:-

Name of the Bank	Punjab National Bank
Branch Name & Address	Krishna Market, Kalkaji, New Delhi
Account No.	0156000100546062
Nature of Account	Savings
IFSC Code	PUNB0015600
MICR Code	110024052

3. The institute/agency will keep the whole of the grant in a bank account earning interest, and the interest so earned should be reported to DBT in the utilization certificate and statement of expenditure. **The interest so earned should be refunded to the consolidated funds of India through Bharat Kosh (NTRP) Portal.**

4. As per "Rule 236 (1) of GFR 2017", the Account of all Grantee Institution or Organisations shall be open to inspection by the sanctioning authority and audit, both by the Comptroller and Auditor General of India under the provision of CAG(DPC) Act 1971 and internal audit by the Principal Accounts Office of the Ministry or Department, whenever the institute or Organisation is called upon to do so.

5. In case the whole or a part of the amount of the grant in aid is being refunded, an interest at the rate of 10% per annum thereon shall be recovered.

6. The terms and conditions of the grant remain unchanged.

7. The tenure of on-going "Strengthening Component" will be terminated one day prior to the date of sanction order of Star Status.

Continue...2/-

8. To maintain continuity of the scheme and avoid gap between the two sanctions i.e the sanction order of the Star Status and the on-going strengthening component, the settlement of strengthening component scheme part will be initiated within 6 months, otherwise the second year grant of Star Status will not be released.

9. Continuation of the project beyond 30.09.2021 will be subject to the appraisal and approval of the relevant scheme for the continuation beyond 30.9.2021.

10. **The Principal, Acharya Narendra Dev College, University of Delhi, Delhi - 110019** will submit the Statement of Expenditure (SE) and audited Utilization Certificate (UC) of expenditure in respect of above mentioned amount.

11. Interest earned amount i.e. **Rs 52,922/-** has been submitted in C.F.I, receipt is also attached.

12. No UC pertaining to this programme is pending with the college; UC for the grant released during last financial year is enclosed herewith.

Annexure- I (List of approved equipment)

S. No.	Department	Equipment details
1.	**Biomedical Science**	pH meter
2.		Weighing Balance
3.		**Fume hood [Qty – (01), Rs. 1,94,700/-]**
4.		**4-Gel Vertical electrophoresis system with powerpac for basic power supply [Qty – (01), Rs. 1,45,000/-]**
5.		**PCR Machine with 1KVa UPS [Qty – (01), Rs. 2,86,500/-]**
6.		UV transilluminator with UV tube for UV source of 320nm, and accuracy of < 5% CV across the viewing area.
7.		Microscope
8.		Magnetic Stirrer
9.		**Ice flaking machine [Qty – (01), Rs. 1,13,280/-]**
10.		Fridge: Single door upright showcase 400 L cooler with minimum 4 shelves, glass door and temperature range of 0-8 degree Celsius
11.		UV/Vis trans- illuminator- UV-Vis transilluminat or with UV tube for UV source of 365nm and compact fluorescent lamps as white source.
12.	**Botany**	**Compound microscope with CMOS camera and Imaging Software [Qty – (01), Rs. 2,99,250/-]**
13.		**UV –VIS (Double beam) Spectrophotometer [Qty – (01), Rs. 3,00,000/-]**
14.		**BSL -2 Cabinet [Qty – (01), Rs. 1,77,000/-]**
15.		**Thermal Cycler with 1KVa UPS [Qty – (01), Rs. 2,86,500/-]**
16.		Electronic Balance
17.		**Humidity Chamber/Stability Chamber [Qty – (01), Rs. 1,59,300/-]**
18.		Industrial Humidifier (Centrifugal)
19.		Digital CO_2 probe - with wired or Bluetooth® including temperature and humidity sensor

Dr. Garima Gupta
Scientist – 'F'

20.		Rotary Evaporator
21.		Magnetic Stirrer with a magnetic bar and beads
22.		Mushroom Growing Racks
23.		Stainless Steel Water Tank with heater
24.		HDPE Drums
25.		Pump Sprayer
26.		Plastic Crate Rectangular Mesh Type
27.	**Chemistry**	Rotary Evaporator
28.		Micro Centrifuge Brushless (without carbons) 20000 rpm
29.		Gauss View Version 6, Single User Academic License on windows platform (for 20 years)
30.		Microprocess or based pH- Meter with Combination Glass pH Electrode, Standard Buffer Tablets, Electrode Stand with Clamp, Dust Cover, Power Cord. PAC: EUTECH pH 2700
31.		Potentiometer with O.R.P Electrodes, Electrode Stand & Dust cover
32.		Conductivity meter with Conductivity Cell K = 1.0, Temperature Probe, Electrode Stand with Clamp, Dust Cover, DC Adaptor
33.		Fume Hood
34.		**Black Jack Coded Hollow Cathode Lamps for Copper, Iron, Zinc, Cadmium [Qty – (01), Rs. 2,00,000/-]**
35.		**Atomic Absorption Spectrophotometer [Qty – (01), Rs. 2,98,000/-]**
36.		Digital Hot Air Oven:
37.		Oil less compressor for atomic absorption spectrophotometer AAS 701
38.		**Burners head for nitrous oxide and C2H2 [Qty – (01), Rs. 1,80,000/-]**
39.		**Gaussian Version 16, Single User Academic desktop license 64Bit Multiprocesso r on Windows Platform.(For 20 years) [Qty – (01), Rs. 2,78,000/-]**
40.	**Computer Science**	CPU Intel Core i5 9500 16/32 GB/ 1000 GB HDD/(i5 9500 DOS 32256SSD1HDD3 P204v)

Dr. Garima Gupta
Scientist – 'F'

41.		Interactive Board Ceramic steel surface interactive board Size: 82.8 inch Mode: Projector and white board both Aspect ratio: 16:9 Touch: Touch-sensitive and pen- driven both O.S.: Windows, Linux, Ubuntu
42.		Printer MFP (Photocopier, Scan, Print) HP M126NW Multi-Function Machines (GMP) (126NW)
43.	**Electronics**	Young 's modulus Set- up consisting of vertical stand with bracket, optical lever, weights, diode laser
44.		e/m of electron by Bar Magnet Set- up consisting of power supply+ CRT+ ba magnet + compass box + woo den stand set + patch chords + weight
45.		Resistance transducer – Strain Gauge setup: Strain gauge, built in power supply, onboard gain and offset adjustment, Digital display, cantilever arrangement
46.		LVDT setup: Digital display, excitation generator, on board LVDT displacement measurement
47.		LDR, Photo diode, and Photo transistor setup consisting four different Optical Transducers with onboard power supply, signal condition in circuits
48.		Fiber opticsens or setup/kit : Diode Laser, optical mounts FO sensor. Optical detector
49.		Faraday rotation setup: He-Ne Laser, optical mounts, polarizer, analyser, Faraday Rod, Multimeter and detector
50.		Electro- optic Effect setup: He-Ne Laser, optical mounts, polarizer, analyzer, Electro-optic modulator, Multimeter and detector
51.		Universal Dev Board with FPGA and CPLD: FPGAs, CPLDs from Xilinx, on board input- output, ADC, DAC Memory, Displays, keyboard & peripheral
52.		Mini micro centrifuges,8x1.5/2.0 mL rotor and 4- placestriptube rotors included,230V
53.		Digital Balance 0-200g/0.001g

Dr. Garima Gupta
Scientist – 'F'

54.		Power Supply/Battery kit for Digital Mass Flow Meter
55.		Digital Mass Flow Meter Flowrate0- 500ml/minor higher
56.		Nano particles Generation setup: Max Speed 15000rpm, MaxRCF21000 gMax Capacity>400ml, Digitaltimer range 0-99min, programmable
57.		Setup for study of architecture of Mobile phone: Dual SIM GSM mobile equipment, Keypad of mobile handset, SIM sockets and User Interface Vibrator, Buzzer, Microphone, Speaker, Hands free port and display LEDs with switched faults creation facility and58 testpoints for signal observation
58.		**Set- up for Satellite Communication System |Qty – (01), Rs. 1,15,000/-|**
59.		Control Lab setup with software and data acquisition* Temperature sensor, light sensor, DC motor, servo Motor, LED lamps,IR sensor, relay SPST, relay DPDT, debounce switch, LED bar, buzzer etc., which can be used for the study of control system using P,PI & PID alongwith Data Acquisition System
60.		**AI Builder |Qty – (01), Rs. 2,35,250/-|**
61.		**IoT Builder |Qty – (01), Rs. 1,31,250/-|**
62.		**3 D Printer |Qty – (01), Rs. 2,17,750/-|**
63.	**Physics**	Programmable Portable Data Logger with touch screen interface
64.		Complete set- up for study of piezoelectric crystals
65.		Complete set- up to measure susceptibility of paramagnetic solution by Quincke's tube Method.
66.		Complete set- up to plot B-H curve of iron using a solenoid
67.		Type A - Multi Output (three) Regulated DC Power Supply
68.		Complete Analog Communication Trainer Kit
69.		Complete trainer Kit for studying Pulse Amplitude / Position / Width Modulation & Demodulation
70.		Complete trainer kit for studying Amplitude/ Frequency/ Phase Shift Keying Modulation & Demodulation
71.		Complete set- up to study characteristics of MOSFET, FET & UJT
72.		Complete Hartley and Colpitt Oscillators Trainer set-up

Dr. Garima Gupta
Scientist – 'F'

73.		Training Platform to study Flipflops, Shift Registers & Counters
74.		10 MHz Single Channel Function Generator
75.		Digital Storage Oscilloscope (DSO)
76.		Theta – two theta rotation stage
77.		Type A – Optical breadboard
78.		Complete set- up to measure characteristics of DIAC, TRIAC & SCR
79.	**Zoology**	Soil and water analysis kit (multiparameter)
80.		Weighing Balance 0.1mg
81.		pH meter 3 point Calibration bench top
82.		**Gel documentation system with computer system [Qty – (01), Rs. 2,50,000/-]**
83.		Horizontal gel apparatus
84.		Power pack 300V
85.		**Fully Automatic Autoclave with digital controller 50 Liters [Qty – (01), Rs. 1,10,000/-]**
86.		Double distillation unit – 2.5 ltrs/hrs
87.		BOD incubator
88.		UV hand held lamp
89.		Refrigerator
90.		**-20 ^{0}C Deep Freezer 450 Ltrs, Epoxy Coated Metallic Body [Qty – (01), Rs. 1,57,000/-]**
91.		Micro Centrifuge
92.		Magnetic Stirrer with hot plate
93.		**Microscope with camera (Botany) [Qty – (01), Rs. 2,99,250/-]**

GOVERNING BODY MEETING

Date: Monday, September 28, 2015 at 2.00 pm

Venue: Acharya Narendra Dev College, Govindpuri, Kalkaji, New Delhi 110019.

M I N U T E S

Minutes of the Governing Body Meeting held on Monday, September 28, 2015 at 2.00 p.m. in the Committee Room of the college.

The following members were present:

1.	Shri Rajiv Chaudhary	(in the Chair)
2.	Shri. Guneesh Agrawal	Treasurer
3.	Shri Mehmood Khan	
4.	Dr. T.C. Sharma	
5.	Professor Kiran Devendra	
6.	Dr. Saumya Saxena	Teacher Representative
7.	Dr. Sandeep Kumar Goel	Teacher Representative
8.	Dr. Savithri Singh	Principal (Member Secretary)
9.	Dr. Amit Garg	Bursar (Special Invitee)
10.	Mr. Chetanya Sharma	Non-teaching Representative (Special Invitee)

The following members of the Governing Body conveyed their inability to attend the meeting due to pre-occupation /medical grounds.

1. Shri Vishal Nagar
2. Shri Firoz Ahmed
3. Shri Anil Gupta
4. Shri Yogesh Shukla
5. Professor Ravinder Gargesh
6. Professor Renu Deswal — University Representative

Professor C.K. Jaggi completed his term as University Representative on 05th September 2015. Name of the University Representative against this tenure completion has not been received by the College.

I. Action Report:

The Governing Body noted the actions taken by the college on the following matters approved in the Governing Body meetings held on September 23, 2015 and August 20, 2015.

All other guidelines for the above schemes shall remain unchanged.

8. **Appointment of Transformational Manager for upkeep of College data and assistance to the staff for College Automation Software (ERP) of TCS.**

The Governing Body approved the appointment of Transformational Manager with a salary of Rs. 20,000/- per month for upkeep of College data entry, adoption of modules and assistance to the staff for College Automation Software (ERP) of TCS.

9. **Institution of Best Student Award.**

The Governing Body approved the proposal of the college in principle and asked the college to formulate the guidelines for best student award. Shri Mehmood Khan, Member Governing Body volunteered to help the college in deciding the parameters for the award.

10. **Allocation of Rs. 2 Crore from the College Development Grant and use of the interest earned to promote Research and Innovation.**

The Governing Body approved the proposal of the college for allocation of Rs. 2 Crore from the College Development Fund and use the interest earned to promote Research and Innovation in the college. Appropriate guidelines shall be framed by the College for implementation of this scheme. The Governing Body also recommended that the amount may also be used to fund Innovation Projects. The Governing Body further resolved to grant discretionary powers to the Principal of the college for permitting to use this fund on case-to-case basis.

11. **Permission for using funds for Theatre Production.**

The Governing Body of the college granted permission to use a sum of Rs. 6,70,000/- from the Development Fund for staging of the play in the Silver Jubilee year of the college.

12. **Permission for allocations of funds to celebrate Silver Jubilee of the College.**

The Governing Body of the college approved in principle the use of a sum of Rs. 12,00,000/- from the Development Fund for a year-long Silver Jubilee Celebrations of the college. It was further resolved that College shall constitute a committee to administer the successful holding of various events by incorporating innovative ideas. College shall make a detailed budget for the same and look at the possibility of showcasing it digitally to the stakeholders.

13. **Essential deduction for Medical reimbursement from teaching and non-teaching employees.**

The Governing Body of the college approved the essential deduction at the notified rates for availing Medical facilities including medical reimbursement from teaching and non-teaching employees from the month of October 2015 onwards by opting for membership

BAHADURSHAH ZAFAR MARG,

FORM – 2

HUMAN RESOURCE DEVELOPMENT GROUP, CSIR
CSIR Complex, Library Avenue, Pusa, New Delhi-110 012

SENIOR RESEARCH ASSOCIATESHIP (SCIENTISTS' POOL SCHEME)

JOINING REPORT

After making the four Xerox copies of Form-2, Senior Research Associate shall fill in the following certificate of joining and get it countersigned by his/her Head of the Department, all the four copies of joining report in original and send three copies to the address given above. One additional copy may be forwarded by the Head of the Department/Organization duly countersigned and stamped with official seal.

CERTIFICATE

I, Dr./~~Miss~~/~~Mrs~~/~~Shri~~ MONIKA MISHRA

have joined duty as a Senior Research Associate at IPAV lab, Dept. of Zoology, Acharya Narendra Dev College (Univ. of Delhi), Govindpuri, N.D.-19 with effect from 1/1/2021 (forenoon/~~afternoon~~)

Candidate Signature Monika

Date January 1, 2021

Officiating Principal
Acharya Narendra Dev College
(University of Delhi)
Govindpuri, Kalkaji
New Delhi-110019

(Counter signature of the Head of the Department with official seal)

Three specimen Signatures of the Senior Research Associate are given below

1. Monika
2. Monika
3. Monika

ACHARYA NARENDRA DEV COLLEGE
(UNIVERSITY OF DELHI)

The College is running following research and innovation laboratories.

(i) Material Science
(ii) Polymer Research
(iii) Environmental Monitoring and Assessment
(iv) Sensing Materials & Devices
(v) Think Lab
(vi) CUBE Lab
(vii) OPEN Lab
(viii) Ciliate Biology
(ix) Anti-mycobacterial Drug Discovery
(x) Chemical Biology
(xi) Insect Vector & Pests
(xii) Microbial Technology
(xiii) Chandra Computational
(xiv) Mathematics Research Centre
(xv) Inorganic Chemistry

College has 14 Ph.D. students pursuing their research work under the supervision of 09 University recognized supervisors. Many UG students also work on various projects in these research laboratories.

Small requirements from these laboratories keep coming from time to time.The Finance Committee of the college while deliberating on the requirements of two such research laboratories at its meeting held on Friday, November 25, 2016 has recommended setting of a Research Contingency Grant. This grant will facilitate smooth running of these research and innovation laboratories. Hence, the Finance Committee has recommended that a research contingency grant amounting to a maximum of Rs. 15,000/- (per annum) per laboratory may be sanctioned to each of these research and innovation laboratories.

In the light of the recommendation of the Finance Committee, it is requested to grant permission to establish the research contingency grant from Student Welfare Fund (Society Account).

Submitted to the Chairperson, Governing Body for approval.

Principal
30/11/16

Chairperson
Governing Body

Finance Committee

A meeting of the Finance Committee was held on 25/11/2016 (Friday) in the Committee Room at 1230 hours. The following members were present –

1) Dr. Amit Garg. 25/11/16
2) Dr. ARIJIT CHOUDHURI 25/11/16.
3) DR. SEEMA MAKHIJA 25/11/16
4) Dr Roopesh Telm 25/11/16
5) Dr. Sandeep Goel 25/11/16
6) Dr Udaibir Singh. 25/11/16
7) Dr Seema Gupta 25/11/16

a) The FC discussed the online UPS requirement of the library and recommends purchase of 2KVA capacity with 30 minute backup through DGS&D rate contract.

b) Since 1st Grant of Rs 20 Lakhs for Non-recurring purchase is received from DHE keeping in record committed expenditure of furniture & fixture items, the FC decided to allocate the ~~the~~ available funds as under [Rs20,00,000/- + revalidated amount of last year].

(i) Electronics – Rs 2,50,000/-
(ii) Computer Science – NIL [as items require IT approval from DHE].
(iii) Chemistry – Rs 2,50,000/-
(iv) Zoology – Rs. 2,11,500/-
(v) Botany – Rs 2,50,000/-

Instrumentation Lab (PS + LS) – 4,00,000/–

(viii) Biomedical Science – Rs 2,50,000/–

(ix) Library – Rs 5,00,000/–

c) The FC also approved floating of rate-contract for the purchase of LASER printer cartridges that are required across various departments in the college.

d). Budget proposal floated by the sports committee for 2016-17 for Rs 9,44,150/– was approved by the FC.

e) The FC is in receipt of two requirements from ciliate Biology Lab and Antimycobacterial Drug Discovery Lab. for furniture and other items. The FC recommends establishment of a Research Contingency grant since the College has a number of research laboratories as listed below:–

(i) Material Science
(ii) Polymer Research.
(iii) Environmental Monitoring and Assessment
(iv) Sensing Materials & Devices
(v). Think Lab.
(vi) CUBE – Lab.
(vii). OPEN – Lab.
(viii) Ciliate Biology
(ix). Antimycobacterial Drug Discovery
(x). Chemical Biology
(xi) Insect Vector & Pests
(xii) Microbial Technology
(xiii) Chandra Computational.
(xiv) Mathematics Research Centre.
(xv) Inorganic Chemistry
(xvi)

26

...nce requirements from the aforementioned laboratories keep coming from time to time. Hence FC recommends a research contin... grant amounting to Rs 15000/- (per annum) each of the research laboratories. Other essen... items required in these research laboratories wo... separately assessed and processed.

Udaibir Singh 25/11/16 — 25/11/16 — 25/11/1

Gupta 25/11/16 — 25/11/16 — S Mary 25/11/1

Submitted to the Principal for approval

(e) upto a maximum of Rs 15,000/- per. We may seek GB's permission for item (e). Rest approved.

25/11/16.

Dr. Sarita Kumar
Professor
Department of Zoology

Certificate

This is to certify that the Dissertation work entitled "**Variations in physiological parameters in dengue vector *Aedes aegypti* L. induced by chemical insecticides (Imidacloprid and Cypermethrin)**" has been carried out by **Ms. Anushree Gupta,** Enrollment no. A12137520020**,** Amity Institute of Virology and immunology, as a part of NTCC Dissertation (BTDS600) work.

The work has been done under my supervision and guidance at **Acharya Narendra Dev College (University of Delhi)** for a period of **Jan 3, 2022** to **June 6, 2022**. During the project work, the candidate has learnt techniques like insect culture, insecticide dilutions, insecticide susceptibility bioassays, scrutinization of morphological and physiological parameters in mosquito larvae, sex discrimination between adult mosquitoes and statistical analysis.

10	2021-2022	Hands-on Training for Support Staff on "Tools in Modern Biology" (Zoology)	12	April 21, 2022
11	2021-2022	Webinar on Environmental Hazards of e-waste and Plastic waste (Botany, Biomedical Science, Zoology)	79	July 31, 2021
12	2021-2022	IP Awareness/Training Program under the National Intellectual Property Awareness Mission by the Intellectual Property Office, India (Zoology)	76	December 29, 2021
13	2020-2021	Two Week Online National Workshop on "Tools and Techniques in Statistical Analysis" (Biomedical Sciences,Botany,Mathematics,Zoology)	210	April 06-19, 2021
14	2020-2021	Three days online hands-on workshop on "Advanced Bioinformatics", on topic "A step-by step guide to Data mining from literature to pathways" by Dr. Srinivasan Ramachandran Senior Principal Scientist CSIR-IGIB (Biomedical Sciences,Botany&Zoology)	28	March 1-3, 2021
15	2020-2021	Five day RBPT based workshop on "Bioinformatics for Undergraduate students" (Biomedical Sciences,Botany,Zoology)	86	January 9–13, 2021
16	2020-2021	Webinar on "Evolution as Darwin knew as a child" (Zoology)	54	May 22, 2021
17	2020-2021	'Career in Indian Forest Service: A session with IFS officers' (Biomedical Sciences,Botany & Zoology)	67	April 18, 2021

18	2020-2021	Career counselling series: Career in Forensic Science: An Interaction with Seniors (Biomedical Sciences,Botany & Zoology)	49	March 20, 2021
19	2020-2021	Career counselling series: Studying in Europe: Interaction with seniors (Biomedical Sciences,Botany & Zoology)	97	March 14, 2021
20	2020-2021	Career counselling series (Career after MBA: Exploring the unexplored) (Biomedical Sciences,Botany & Zoology)	90	March 7, 2021
21	2020-2021	Webinar on "Open Licensing and Online Content" (Zoology)	76	September 25, 2020
22	2019-2020	Workshop on "Techniques in Molecular Microbiology" (Biomedical Sciences and Zoology)	35	February 25, 2020
23	2019-2020	Workshop on "Molecular Biology Techniques" (Biomedical Sciences and Zoology)	56	November 22, 2019
24	2019-2020	One Day Interdisciplinary Exhibit Presentation New Frontiers in Science (Biomedical Sciences, Chemistry, Computer Science, Electronics, Physics, Zoology)	112	October 22, 2019
25	2019-2020	Workshop "Learning Molecular Biology Techniques" (Biomedical Sciences and Zoology)	88	September 24, 2019
26	2019-2020	Workshop on "Unravel the Microbial World by Foldscope" (Botany and Zoology)	44	September 9, 2019
27	2019-2020	Workshop on Learning Science" The Do it Yourself Way" (Botany and Zoology)	38	July 17, 2019
28	2019-2020	Protecting wildscapes in Contemporary India (Zoology)	76	August 30, 2019
29	2019-2020	Webinar: "The Growth of Linnean thought: Impact of common descent and current understanding"	48	May 11, 2020

		(Zoology)		
30	2018-2019	Interdisciplinary workshop 'Learning Science by Doing Science'. (Botany, Chemistry, Physics, Zoology)	30	June 18-24, 2019
31	2018-2019	Two-day workshop on "Hands-on to computational biology for (meta)genomic analysis". (Botany, Zoology)	37	April 04-05, 2019
32	2018-2019	Mini symposium on International Women's day, 2018 (Zoology)	150	March 8, 2019
33	2018-2019	Workshop: Hands – on Training of ELISA Technique (Zoology)	90	February 13, 2019
34	2018-2019	Workshop: Education Conclave 2018 – 'Education deconstructed: A dialogue with experts' (Zoology, Chemistry, Computer Science, Biomedical Sciences, Physics, Electronics, Mathematics)	117	November 2, 2018
35	2018-2019	Connection between Environmental and Human MicroBiome (Zoology)	45	June 18, 2019
36	2018-2019	Malaria elimination in India: Role of vector control (Zoology)	66	February 19, 2019
37	2018-2019	A talk on Contemporary Approaches in Anti-Malarial Drug Discovery (Zoology)	73	October 10, 2018
38	2017-2018	International Symposium on "Ciliate Biology 2018 " (ISCB 2018) (Zoology)	240	April 04-06, 2018
39	2017-2018	Symposium on "Safety Measures and Laboratory Ethics" (under the aegis of Star College Scheme) (Zoology &Chemistry)	94	February 21-22, 2018
40	2017-2018	Workshop on "PCR & Southern Blotting" (Zoology)	79	September 26, 2017

41	2017-2018	Workshop on "Anxiety at Workplace" (Zoology)	41	August 25, 2017
42	2017-2018	Awareness on IPR and Social Insects (Zoology)	76	September 5, 2017
BMS				
43	2021-22	Webinar on "Designing of a Novel Vector for Rapid One- Step Cloning and Expression in E- Coli(BMS)	75	January 28,2022
44	2021-2022	Introduction to BioNEST- UDSC and Bio entrepreneurship (Biomedical Science)	64	February 15, 2022
45	2021-2022	Workshop on "Tools in Modern Biology" (Biomedical Science)	10	April 21, 2022
46	2021-2022	Kitchen is your Health tool (Biomedical Science)	66	April 18, 2022
47	2020-2021	Webinar on 'Introduction to digital forensics and electronic evidences' (Biomedical Sciences)	78	April 3, 2021
48	2021-2022	Symposium on "Phage Lysins: Promising alternatives to antibiotics" (Biomedical Science)	150	July 9, 2021
49	2020-2021	Webinar on "Virology: Importance in human health management, scope & prospects" (Biomedical Sciences,Botany & Zoology)	79	March 17, 2021
50	2020-2021	Webinar on "Flow cytometric approach to understanding disease biology" (Biomedical Sciences,Botany & Zoology)	79	March 17, 2021
51	2020-2021	Webinar on "Complexity of immune response in Covid19" (Biomedical Sciences,Botany & Zoology)	79	March 17, 2021
52	2020-2021	Webinar on "Vaccine development for respiratory viruses: Past & Future" (Biomedical Sciences,Botany & Zoology)	79	March 17, 2021
53	2020-2021	Webinar on "Phage genome annotation: the right way and/or the easy way"	59	March 2, 2021

		(Biomedical Sciences)		
54	2020-2021	IBRC-Phage Directory webinar series on Phage Bioinformatics: Tailored Medicine: Bioinformatic anlysis of bacteriophages for therapeutic use lessons learned from single patient cases (Biomedical Sciences)	55	March 30, 2021
55	2020-2021	Webinar on BRC-Phage Directory webinar series on 'Phage Bioinformatics: Phage genome annotation pipelines in CPT Galaxy and WebApollo' (Biomedical Sciences)	63	April 7, 2021
56	2020-2021	Event: Covid- 19 vaccines:From bench to bedside;amidst a pandemic, Webinar on"Lesson learned from COVID 19" (Biomedical Sciences)	76	January 21, 2021
57	2020-2021	Event: Covid- 19 vaccines:From bench to bedside;amidst a pandemic , Webinar on "Vaccines for COVID-19 and the way ahead" (Biomedical Sciences)	76	January 21, 2021
58	2020-2021	Webinar on "Challenges in commercially developing phage therapy to target drug-resistant bacteria" (Biomedical Sciences)	67	January 27, 2021
59	2020-2021	Webinar on "Genomic annotation and comparative bioinformatic analysis of action-bacteriophages" (Biomedical Sciences)	60	February 16, 2021
60	2019-2020	Science Setu, Typhoid Diagnostics, Innovation in Diagnostics (Biomedical Sciences)	78	February 25, 2020
61	2019-2020	Webinar on COVID 19- Truths and Myths (Biomedical Sciences)	99	June 9, 2020
62	2019-2020	Webinar on Mycobacteriophages: Diversity, Dynamics and Therapy (Biomedical Sciences)	67	June 17, 2020

63	2020-2021	Webinar on "Phage Directory: Making the world's phages more accessible, manageable and shareable" by Dr Jessica Sacher and Mr Jan Jhang, Co-Founders, Phage Directory USA (Biomedical Sciences)	69	September 3, 2020
64	2020-2021	Online workshop on "Python coding workshop for biologists" by Ms Shruti Gupta and Mr Alok Anand, Jawaharlal Nehru University. November 2020. (weekends, 20 hour) (Biomedical Sciences)	14	November 20, 2020
65	2020-2021	Webinar on "Knowing the unknown: Approaches to characterize the uncharacterized proteome of bacteriophages" by Prof B.N.Tripathi, Deputy Director-General, Animal Science, ICAR HQ, New Delhi and Dr Juliannae H. Grose, Associate Professor, Brigham Young University, USA (Biomedical Sciences)	65	October 1, 2020
66	2020-2021	Seminar on "Using phages to combat AMR: Scientific capacity building through laboratory training workshops" by Dr. Tobi Nagel, Founder & President of Phages for Global Health, USA and Dr. Janet Nale, Research Associate, Department of Infection, Immunity and Inflammation, University of Leicester, UK (Biomedical Sciences)	63	August 14, 2020
67	2019-2020	Webinar on COVID 19- Truths and Myths (Biomedical Sciences)	99	August 17,2020
68	2020-2021	Webinar on "From discovery to high-throughput engineering of phage lysins targeting Gram-negative bacteria" (Biomedical Sciences)	57	July 9, 2020
69	2018-2019	Demystifying Myths surrounding Human Health by Science Behind Myths (Biomedical Sciences)	67	January 31, 2019

70	2018-2019	Workshop on Foldscope (Biomedical Sciences)	40	February 2, 2019
71	2019-2020	An interactive session on Drug Discovery against MDR Microbes (Biomedical Sciences)	84	August 14, 2019
72	2019-2020	BMS Alumni Lecture Series: An Interactive Session on Science Communication (Biomedical Sciences)	67	August 28, 2019
73	2018-2019	e-Health: Exploring it's potential for Healthcare Delivery (Biomedical Sciences)	56	October 25, 2018
Computer Science				
74	2021-2022	Workshop on "Effective Presentation & Image Management for Success" (Computer Science)	110	August 24-25, 2021
75	2021-2022	Workshop on "Front End Web UI Frameworks Overview: Bootstrap" (Computer Science)	105	October 02-03, 2021
76	2021-2022	Workshop on "HTML: A Prerequisite for MERN Stack" (Computer Science)	74	October 06-07, 2021
77	2021-2022	Workshop on "A First Step Towards Developing Virtual Lab Using MERN Stack" (Computer Science)	78	October 09-24, 2021
78	2021-2022	Workshop on "Face recognition using Python" (Computer Science)	102	October 26-30, 2021
79	2021-2022	Workshop on "Let's Talk DevOps" (Computer Science)	78	March 11-13, 2022
80	2021-2022	Role of IT in Indian Banking System (Computer Science,Commerce)	78	July 14, 2021
81	2021-2022	Explainable AI (Computer Science)	73	October 4, 2021
82	2021-2022	Predictive Modeling using Python (Computer Science)	67	October 8, 2021

83	2021-2022	Cisco Network Administration (Computer Science)	65	March 3-4,2022
84	2021-2022	Wireless Security Network (Computer Science)	78	March 4, 2022
85	2020-2021	One day workshop on "Google classroom" under the aegis of DBT Star Scheme (Computer Sciences)	53	November 27, 2020
86	2019-2020	Workshop on "Linux and FOSS" (Computer Science)	740	September 16, 2019
87	2019-2020	Workshop on "Machine Learning" (Computer Science)	55	March 4, 2020
88	2019-2020	Technical Talk on "System Automation and HA Clustering " (Computer Sciences)	63	November 7, 2019
89	2019-2020	Webinar on Unravelling The Social Network Of Covid-19 In India (Computer Sciences)	76	June 15, 2020
90	2018-2019	Workshop on"Awareness on FOSS and LINUX" (Computer Science)	722	August 28-30, September 4, 2018
91	2018-2019	Workshop on "Awarness on Digital India Initiative" (Computer Science)	147	September 18, 2018
Chemistry				
92	2021-2022	Workshop on "Introduction to New Experiments" (Chemistry)	45	April 21, 2022
93	2021-2022	Hands-on workshop on "Computational Chemistry: A New Approach to Understanding & Solving Chemical Problems" (Chemistry)	56	October 06-07, 2021
94	2021-2022	Workshop on "Basics of Photoshop" (Chemistry)	67	September 30-October 01, 2021
95	2021-2022	Hands-on workshop (online mode) on "Exploring and Understanding Computational Chemistry Using	45	March 07-10, 2022

		Gaussian: Molecular Builder and Visualization Tool" (Chemistry)		
96	2021-2022	Ethics to Paper writing (Chemistry)	77	April 19, 2022
97	2021-2022	e- resources of Delhi University and inflibnetNList (Chemistry)	67	July 31, 2021
98	2021-2022	Lecture series (online mode) of "Journey of an Alumni" Journey of an Alumni Episode -1 The Rise (Chemistry)	56	October 16,2021
99	2021-2022	Lecture series (online mode) of "Journey of an Alumni" Journey of an Alumni Episode -2 The Rise (Chemistry)	57	October 22, 2021
100	2021-2022	Lecture series (online mode) of "Journey of an Alumni" Journey of an Alumni Episode -3 The Rise (Chemistry)	67	30-Oct-21
101	2021-2022	Lecture series (online mode) of "Journey of an Alumni" Journey of an Alumni Episode -4 The Rise (Chemistry)	66	November 26, 2021
102	2021-2022	Lecture series (online mode) of "Journey of an Alumni" Journey of an Alumni Episode -5 The Rise (Chemistry)	67	December 10, 2021
103	2020-2021	Workshop on "Hands on training for skill development" (Chemistry)	22	March 1-2, 2021
104	2020-2021	Career Opportunities After Graduation (Chemistry)	95	November 12, 2020
105	2019-2020	Seminar on Intellectual Property Rights (IPR) Patents (Chemistry)	67	November 7, 2019

106	2019-2020	Workshop on "Empowering teachers: Current technology based educational contents creation and delivery" (using open source, free software) (Botany and Chemistry)	25	December 02-06,2019
107	2019-2020	Covid 19 Impact: Strategies for Education and Challenges in Virtual Learning' (Chemistry)	45	May 20, 2020
108	2018-2019	Workshop on "Legal Awareness Program on E-Waste Management" (Chemistry)	60	August 11, 2018
109	2018-2019	Workshop on "Teachers as Mentors" (Chemistry)	25	October 25, 2018
110	2018-2019	Tinkering for Scientist (Chemistry)	69	February 13, 2019
111	2017-2018	Three day National Symposium on Contemporary Environmental Concerns (Chemistry)	100	March 15-17, 2018
		Electronics		
112	2021-2022	Workshop on "Full Stack Web Development using MERN" (Electronics)	86	March 05-09, 2022
113	2021-2022	Training Workshop and demonstration of lab Equipment (Electronics)	20	March 23, 2022
114	2021-2022	Hands-on Workshop on "Arduino and Sensor Interfacing" (Electronics)	58	March 26, 2022
115	2021-2022	Training Workshop and demonstration of "Control Lab with software and Data acquisition And Universal Dev Board with FPGA and CPLD(Electronics)	16	April 25, 2022
116	2021-2022	Digital Transformation and it's impact on the future after Covid-19 (Electronics)	63	July 07, 2021
117	2021-2022	Cloud Computing	50	Sept 6-9 &11, 2021

118	2021-2022	Career Opportunities in Publishing (Electronics)	67	Feb 4,2022
119	2021-2022	Magnetic Nano-structures based Microwave monolithic signal processing devices:Fabication and testing (Electronics)	56	April 19, 2022
120	2020-2021	A five day workshop on "Hybrid Mobile App development using Flutter programming" (Electronics)	13	July 13-17, 2020
121	2020-2021	Workshop on "Data Science with Python" Under the aegis of DBT star College Scheme (Electronics)	31	March 3-7, 2021
122	2020-2021	Invited Talk : Invited Talk on Creative Thinking and Enterpreneurial Skills by Dr. Ravinder Kaur, Associate Professor, Deptt. Of Electronics, Deen Dayal Upadhaya College, Delhi University	40	June 23, 2021
123	2020-2021	Invited Talk : Imaging Arithmetic	125	June 29,2021
124	2020-2021	Invited Talk:All You need to Know About Writing a Research Paper	70	Feb 28,2021
125	2019-2020	Technical Talk on "IOT and Connectivity Solution" (Electronics)	79	March 3, 2020
126	2019-2020	Workshop on Raspberry Pi automation system (Electronics)	41	March 3, 2020
127	2019-2020	Workshop on Robotics "Robo Race" (Electronics)	45	March 3, 2020
128	2019-2020	One Day Interdisciplinary Exhibit Presentation New Frontiers in Science (Biomedical Sciences, Chemistry, Computer Science, Electronics, Physics, Zoology)	112	October 22, 2019
129	2019-2020	Workshop on "Arduino" (Electronics)	100	September 7, 2019
130	2019-2020	Workshop on Optical Colour Mixing (Electronics)	110	August 9, 2019

131	2019-2020	Workshop on "LabView": Hands-on exposure to Virtual Instrumentation and LabView (Electronics)	67	June 23, 2020
132	2019-2020	Invited Talk:Autonomous Navigation System with Intelligent Camera for Space and Earth	73	March 3,2020
133	2018-2019	A lecture on 'Current trends in Mobile Application Development' (Electronics)	85	September 20, 2018
134	2018-2019	Professional conduct with positive attitude (Electronics)	71	October 04, 2018
135	2018-2019	Satellite Communication (Electronics)	68	January 31, 2019
136	2018-2019	Workshop on "SPIE Induction" (Electronics)	158	September 25-26, 2018
137	2018-2019	Python Workshop: A workshop on 'PYTHON' was organized in association with, industry partner Coding Blocks for the students of Electronics. (Electronics)	70	April 3, 2019
138	2017-2018	A preface into Wireless Communication Warfare (Electronics)	82	January 29, 2018
		Commerce		
139	2017-2018	The Trending Economic and Business Related Issues (Commerce)	130	September 27, 2017
140	2019-2020	Lets Talk Session on "Stock Markets" (Commerce)	120	January 17, 2020
141	2020-2021	Webinar on 'Stop Worrying and Start Living and Earning': Career Vs Job: Road Map (Commerce)	87	August 27, 2020
142	2020-2021	Webinar on 'Top Trends Driving Digital Marketing Strategy' (Commerce)	79	October 9, 2020
143	2020-2021	Webinar on "Insurance for Youth" (Commerce)	79	November 6, 2020

144	2020-2021	Workshop on "E-Filing of ITR 1", Bodhini, Academic Events and Research Committee, Department of Commerce, Acharya Narendra Dev College (Commerce)	88	November 10, 2020
145	2020-2021	Webinar on "How to Publish Research Papers in Scopus/ Indexed Journals?" (Commerce)	49	December 12, 2020
146	2020-2021	Webinar on "An Overview of Indian Contract Act, 1872" (Commerce)	63	January 16, 2021
147	2020-2021	Organised talk under the first series "In Conversation with our Alumni" on "Early Investment- Secured Future" (Commerce)	70	January 28, 2021
148	2020-2021	Two week (online) Interdisciplinary FDP on "From Research to Publication" jointly organized by Department of Commerce, Acharya Narendra Dev College and Mahatma Hansraj Faculty Development Centre, Hansraj College, University of Delhi (Commerce)	128	April 5-17, 2021
149	2021-2022	An Insight into Currency Derivatives (Commerce)	112	September 11, 2021
150	2021-2022	Career Opportunities in MNCs (Commerce)	116	October 9, 2021
151	2021-2022	Workshop on "Ace Canva" (Commerce)	105	February 04-06, 2022
152	2021-2022	Workshop on "Ace Excel" (Commerce)	127	March 07-09, 2022
153	2021-2022	Alumni series on "career options after graduation" (Commerce)	109	April 01, 2022
154	2021-2022	Workshop on "Ace Google" (Commerce)	105	April 06-08, 2022
155	2021-2022	Workshop on "Application of Cost Accounting Standards in the Preparation of Cost Statement" (Commerce)	109	April 20, 2022

Physics				
156	2017-2018	Applications of Biomedical Imaging in Drug Discovery and Treatment Monitoring (Physics)	72	September 26, 2017
157	2017-2018	The Invisible Universe (Physics)	87	February 22, 2018
158	2017-2018	Workshop on "Arduino Microcontrollers" (Physics)	50	April 11-12, 2018
159	2018-2019	Workshop on "Paradigm Shift in Physics Education through hands-on techniques in Optics" (Physics)	150	September 5 &7, 2018
160	2018-2019	A talk on Nanotechnology- Applications in Optoelectronics and Renewable Energy (Physics)	76	January 31, 2019
161	2018-2019	Seminar on Functional Materials for device applications (Physics)	83	March 15, 2019
162	2018-2019	Seminar on MoS2 ; A promising 2-D material (Physics)	83	March 15, 2019
163	2018-2019	Seminar on MIMO antennas for 5G and IoT (Physics)	83	March 15, 2019
164	2018-2019	Interdisciplinary workshop 'Learning Science by Doing Science'. (Botany, Chemistry, Physics, Zoology)	30	June 18-24, 2019
165	2019-2020	Workshop on "Surface Plasmon Resonance (SPR) and UV-Visible Spectroscopy: Basic working principle and Environmental Applications" (Botany and Physics)	123	August 23-27,2019
166	2019-2020	Quartz Crystal Microbalance (QCM) for environmental monitoring and gas detection (Physics)	78	September 12, 2019

167	2019-2020	One Day Interdisciplinary Exhibit Presentation New Frontiers in Science (Biomedical Sciences, Chemistry, Computer Science, Electronics, Physics, Zoology)	112	October 22, 2019
168	2019-2020	Do I see myself doing science (Physics)	75	January 9, 2020
169	2019-2020	Materials for Future Generation Photovoltaic Solar Cells (Physics)	74	March 5, 2020
		Botany		
170	2017-2018	Research Based Pedagogy Tools (RBPT) based workshop on "Microbial Techniques" (Botany)	90	March 12-14, 2018
171	2017-2018	Biodiversity and the Need for its Conversation (Botany)	55	November 2, 2017
172	2017-2018	Environment, Ecology, Ecosystems and Ecological Restoration (Botany)	42	January 18, 2018
173	2017-2018	Saumya Saxena Memorial Lecture ' The Plants that changed India and the world' (Botany)	45	March 23, 2018
174	2018-2019	Interesting advances in Haemoglobin Research: Beyond the textbook (Botany)	63	October 11, 2018
175	2018-2019	Computational Gastronomy :The emerging data science of Food ,Flavors and Health (Botany)	57	February 14, 2019
176	2018-2019	Dr. Saumya Saxena Memorial lecture on Bionics and Bionic Engineering: Learning Science from Nature (Botany)	72	March 26, 2019
177	2019-2020	Lecture on "Biomedical Research in India: from a Rat Race to Taking-up the Real Challenge of Combating Disease" (Botany)	83	September 25, 2019

178	2019-2020	Bioprospecting: "A Path from Ecology to Entrepreneurship" (Botany)	83	September 25, 2019
179	2019-2020	Lecture on "Hitchhikers guide to Integrative System Biology" (Botany)	69	February 25, 2020
180	2020-2021	Webinar on "Humans for Nature" (Botany)	79	October 15, 2020
181	2020-2021	Saumya Memorial lecture entitled 'Arbuscular Mycorrhizal Fungi: true friends of plants' by Prof. Roopam Kapoor, University of Delhi (Botany)	60	March 23, 2021
182	2020-2021	Dr. Saumya saxena Memorial Lecture on Matrix of Multicellular Life: How cell adhesion regulates cell function ; by Dr. Balasubramanian Nagaraj (IISER, Pune) (Botany)	70	July 16, 2020
183	2020-2021	TARUMITRA-The Botanical Society organized lecture on"Cultivation of edible mushroom:Pleurotus species by Prof. Rajni Gupta Department of Botany Kirori Mal College University of Delhi (Botany)	70	June 17, 2021
184	2020-2021	TARUMITRA-The Botanical Society organized lecture on" From mycorrhizosphere to rhizosphere microbiome: The beautiful journey by Prof. Manju M. Gupta, Sri Aurobindo College, University of Delhi (Botany)	70	June 23, 2021
185	2021-2022	Workshop for the non-teaching staff on "Tools in Modern Biology" (Botany)	15	April 26, 2022
186	2021-2022	Challenges and strategic solutions for breaking the bias for better nutrition and health outcomes (Botany)	56	March 8, 2022
187	2021-2022	Dr Saumya Saxena Memorial talk on 'Biomarker discovery for cardiovascular diseases using multiomics approaches'	63	March 23, 2022

DEPARTMENT OF ZOOLOGY

CONFERENCES/WORKSHOPS/SEMINARS FOR THE YEAR 2021-22

Title: International Conference on Mitigating Contemporary Environmental Issues by Sustainable Approaches [ICMCESA-2022]

Chief Patron: Prof. Yogesh Singh, Vice Chancellor, University of Delhi

Patron: Prof. BalaramPani, Dean of Colleges, University of Delhi and Mr. Anil Kumar Saini, Chairman, Governing Body, Acharya Narendra Dev College

1.1.1 Co-patrons: Prof. Shri Prakash Singh, Director, University of Delhi, South Campus; Prof. Sanjeev Singh, Joint Director, University of Delhi, South Campus and Dr Vikas Gupta, Registrar, University of Delhi

1.1.2 Chairpersons: Prof. Ravi Toteja, Officiating Principal, Acharya Narendra Dev College and Dr Garima Gupta, Scientist F, Departmentof Biotechnology, Govt. of India

1.1.3 Co-chairpersons: Prof. Rup Lal, NASI Senior Scientist Platinum Jubilee Fellow The Energy and Resources Institute; Sr. Prof. Suman Lakhanpaul, HOD, Department of Botany, University of Delhi and Prof. Ashutosh Bhardwaj, OSD, Institute of Eminence, University of Delhi

1.1.4 Scientific Chair: Prof. Arijit Chowdhuri, Prof Charu K Gupta and Prof. Seema Makhija

1.1.5 Convenors: Prof. Sunita Hooda, Prof. Sarita Kumar, Dr Sanjeeta Rani, Prof. Geetu Gambhir and Dr Archana Pandey

Session Chairs: Sr. Prof. Mridula Gupta, Prof. Rupam Kapoor, Prof. Vishnu Bhat, Prof. R. K. Negi, Prof. Rup Lal, Prof. Shashi Bhushan, Prof. Rina Chakrabarti, Prof. Indranil Dasgupta, Dr Vijay Pal Singh, Prof. Sanjeev Singh, Prof. Alan Warren, Prof. Sukanya Lal, Prof. Prem Lal Uniyal, Dr Renu Bhagat Kumar, Prof. Rajesh Tandon, Prof. Atul Johri, Prof. Sunita Hooda, Prof. Seema Gupta, Dr Sanjeeta Rani, Prof. SharanjitKaur, Dr Anupama Shukla, Prof. Sarita Kumar, Dr Anita Narang,Dr Sunita Jetly, Dr Neeti Mishra, Prof. Arijit Chowdhuri, Prof. Charu K. Gupta, Dr Manisha Verma, Dr V Bhasker Raj, Dr Geetika Kalra, Prof. Gagan Dhawan, Dr Rashmi Sharma, Dr Rahul Dev, Dr Neelakshi N. K. Borah, Dr Siddhartha, Dr SumitSahni, Mr Abhay PratapSingh, Prof. Pankaj Khanna, Dr Harita Ahuja, Prof. Urmi Bajpai, Dr Aparna Sharma, Prof.Geetu Gambhir, Dr Sanjay Kumar, Dr Kavita Mittal, Dr Sandeep Kumar Goel, Dr Mamta Bhatia

Session Co-chairs: Dr Anupama Shukla, Dr Anita Narang, Dr Pooja Bhagat, Dr Manisha Verma, DrArchna Pandey, Dr Rashmi Sharma, Prof. Seema Makhija, Prof. Arijit Chowdhuri, Prof. Charu K.

Gupta, Dr Geetika Kalra, Dr Manoj Kumar Singh, Dr Sada Nand Prasad, Dr Ravneet Kaur, Dr Aparna Sharma, Dr Kavita Mittal, Dr Rahul Dev, Dr Pragati Malik, Ms Bhawna Kaushik, Dr Jitender Goel, Dr Yash Mangla, Prof. Gagan Dhawan, Dr Vineet Kumar Singh, Dr Neelakshi N. K. Borah, Dr Narayan Singh, Dr Anita Thakur, Dr Gurudutt Rao Ambedkar, Dr Sweety Shrimali, Mr Pawan Kumar, Dr Sidhartha, Dr Sanjay Kumar

1.1.6 Organizing Secretaries: Dr Vineet Singh, Dr Sumit Sahni, Dr V Bhasker Raj, Dr Gurudatt Rao Ambedkar, Dr Narayan Singh

1.1.7 Coordinators: Prof. Gagan Dhawan, Prof. Pankaj Khanna, Dr Manisha Verma, Dr Pooja Bhagat, Dr Anita Narang, Dr Sandeep Kumar Goel, Dr Anupama Shukla, Dr Rashmi Sharma, Dr Sada Nand Prasad, Dr Ravneet Kaur, Dr Harita Ahuja, Mr Pawan Kumar

Program Committee: Dr Yash Mangla, Dr Pragati Malik, Dr Sweety Shrimali, Dr Manoj Kumar Singh, Dr Sanjay Kumar, Dr Jitender Goel, Dr Aparna Sharma, Dr Rahul Dev, Mr Abhay Pratap Singh, Dr Siddhartha, Dr Neelakshi N. K. Borah, Dr Kavita Mittal, Dr Anita Thakur, DrRimpy Kaur Chowhan, DrRitu Khosla, Ms Bhawana Kaushik, Ms Ankita Rasaily

Date: February 22-28, 2022

No of Participants: 373

Resource Persons (Plenary/Keynote/Invited Speakers):

Report:

Acharya Narendra Dev College organized an International E-Conference titled "Mitigating Contemporary Environmental Issues by Sustainable Approaches [ICMCESA-2022]. In commemoration of Science week the event spanned from February 22-28,2022. With consideration of the ongoing "Decade of Action" proclaimed by the United Nations, the main focus of the conference was to generate interest among all on the pressing environmental concerns and the urgent need to adopt sustainable approaches worldwide to protect the habitat. A theme of such pertinence, the speakers and various presenters confronted diverse 'Areas of Concern'. Adhering to Covid-19 protocols regarding travel restrictions and social distancing, this conference was conducted over the virtual platform, the event hosted speakers from USA, Slovenia, Australia, UK, Uruguay, and Czech Republic, to name a few. Prof. Gaytha A Langlois, with extensive experience in crafting municipal and statewide environmental policies, from the Department of Environmental Policy at Byrant University, Rhode Island, USA, graced the inauguration day as the plenary speaker. She addressed the crises arising from misalignment of policy goals and strategies

of navigating environmental challenges in her plenary talk titled, "Syzygy or Sisyphus: The Future of Environmental Policy Making". There were a total 16 keynote speakers from all over the world who shared their innovative knowledge and application methodology regards to environment in the conference. There were 28 invited talks from all over India and consisted of an inclusive amalgamation of Professors, Academicians, Scientists, Ecologists, and Law Practitioners etc. The scientific advisory board members for the conference were, Professor C. R. Babu (Retd.) Department of Botany, University of Delhi, INDIA; Professor Gaytha L. Langlois, Professor of Environmental Policy, Bryant University, Rhode Island, USA; Dr Alan Warren (Retd.), Natural History Museum, London, UNITED KINGDOM; Professor Rup Lal, FNA, FNASc, FNAAS, NASI Senior Scientist Platinum Jubilee Fellow, The Energy and Resources Institute, INDIA; Dr J. R. Bhatt Advisor (Climate Change), Ministry of Environment, Forest and Climate Change, INDIA; Prof.Rupam Kapoor, Department of Botany, University of Delhi, INDIA; Prof.RadheyShyam, Department of Environmental Science, University of Delhi, INDIA; Prof. M. M. Chaturvedi, Department of Zoology, University of Delhi, INDIA; Prof. Amit Singh, Department of Commerce, Delhi School of Economics, INDIA; Prof. Ashutosh Bhardwaj, OSD, Institute of Eminence, University of Delhi, INDIA; Dr Debasish Mohanty, National Institute of Immunology, INDIA; DrGarima Gupta, Scientist F, Department of Biotechnology, Ministry of Science and Technology, INDIA.

This e-conference was a unique affair for a varied number of reasons, the themes and scope of the conference covered the following expansive range, Environmental Assessment, Environmental Mitigation by Physical, chemical and biological approaches, Biodiversity conservation and reclamation, Laws and Policies for Environmental protection, GIS mapping and remote sensing for environmental assessment, Environmental toxicology, Sustainable cities and communities, Environmental economics and eco-preneurship, Igniting young minds for environmental sensitization, Data analytics in environment, Green Finance and Environment and Public Health. Apart from the talks by keynote, invited speakers and participants, the conference programme also consisted of Technical sessions for a pragmatic and empirical approach to the theoretical discussions. There were more than 100 oral presentations by undergraduate, postgraduate research scholars and faculty traversing the entire nation from Kashmir to Kerala. There were 51 oral presentations by the faculty and students of ANDC where they got the opportunity to present their work. The event was successfully culminated, first of its kind to be executed by any college under University of Delhi, with the hope that it will play a pivotal role in inspiring further synergy on a

global scale, which is the only feasible way to manage and sustain our environment. The ambitious feat of planning and executing this week long international conference was possible because of the accommodating nature of all involved. Best Oral and Poster presentations were awarded during the valedictory function.

Mitigating Contemporary Environmental Issues by Sustainable Approaches

Acharya Narendra Dev College shows the way

Dr. Ravi Chaturvedi

Environmental sustainability covers a wide range of issues starting from a specific location to a global situation. Global issues comprise concerns about GHG mitigation, climate change, and renewable energy, while the location-specific issues are soil erosion, water management, soil quality, and air and water pollution.

Befittingly, giving priority to environmental issues, Acharya Narendra Dev College of University of Delhi while celebrating the Science Week organised an International E–Conference on Mitigating Contemporary Environmental Issues by Sustainable Approaches recently. Kudos to dynamic Principal Dr. Ravi Toteja, visionary teacher Dr. Seema Makhija, faculty members and students for their initiative and efforts on a burning issue confronting the mankind at the moment.

It will be pertinent to point out that known as prima donna of education in The University of Delhi, Acharya Narendra Dev College accredited 'A' Grade by NAAC with a score of 3.31has been awarded Star status by DBT. It is another feather of success in the cap of Principal Prof. Toteja and the faculty members of a centre of knowledge and learning.

In the wake of recently declared "Decade of Action" proclaimed by the UN, the main focus of the conference was on the pressing environmental concerns and the urgent need to adopt sustainable approaches worldwide to protect the habitat. The significance of a burning topic of the conference drew eminent scholars from diverse fields to converge on to college auditorium from Australia, Czech Republic, Slovenia, UK, Uruguay and USA who participated actively in the deliberations of the conference. Adhering to COVID-19 protocols, constraints regarding travel restrictions and social distancing, the conference still turned out to be a benchmark on "Mitigating Contemporary Environmental Issues by Sustainable Approaches".

There were a total 16 keynote speakers from all over the world who shared their innovative knowledge and application methodology with regard to environment in the conference. There were 28 invited speakers from such diverse domains - Professors, Academicians, Environmentalists, Researchers from Environmental related fields, Scientists involved in Mitigation of Environmental issues and even Legal Practitioners.

Prof. Gaytha A Langlois, a doyen in crafting municipal and statewide environmental policies, Department of Environmental Policy, Byrant University, Rhode Island, USA, was plenary speaker who graced the inaugural deliberations. She focused on the crises of misalignment of policy goals and strategies of navigating environmental challenges in talk entitled, "Syzygy or Sisyphus: The Future of Environmental Policy Making".

This E- conference was unique in dealing with diverse themes while the scope of the conference covered important areas extensively - ranging from Environmental Assessment, Environmental Mitigation by Physical, chemical and biological approaches, Biodiversity conservation and reclamation, Laws and Policies for Environmental protection, GIS mapping and remote sensing for environmental assessment, Environmental toxicology, Sustainable cities and communities, Environmental economics and eco-entrepreneurship, Igniting young minds for environmental sensitization, Data analytics in environment, Green Finance and Environment & Public Health.

Apart from the talks by keynote speakers and participants the conference also focused on pragmatic and empirical approach to the theoretical discussions. There were more than 100 oral presentations by undergraduates, postgraduates, research scholars and faculty members from Kashmir to Kerala.

An outreach program for school students, "ECO-VILLE" was another important component of the E- conference where avant-garde research projects, video presentations, environmental quiz and paper presentations were invited. The major initiative of this outreach program was aimed at introducing young minds to innovative thinking and open pathways for research to the aspiring environmentalist. It was designed to encourage and involve students by funding *avant-garde* projects, awarding exciting prizes for quiz winners, best presenters while giving certificates to all. Another highlight of the conference was the inauguration of Virtual lab presided over by Dr. Garima Gupta, Scientist F, Department of Biotechnology, Govt. of India.

Prof. Ravi Toteja, Principal of the College on behalf of the entire faculty and students, had sense of pride at the successful culmination of an unique event, the maiden venture of its kind in the annals of the colleges of the University of Delhi. The event left a feeling of buoyancy in Prof. Toteja who felt that it will play a pivotal role in inspiring further synergy on a global scale, which is the only feasible way to manage and sustain our environment. The ambitious feat of planning and executing this week-long international conference was possible because of the accommodating nature of all involved. Right in sync with the driving force required in bringing substantial change in approach towards environment, everyone participated in the conference with a sense of awe towards a larger cause of the health of our Mother Nature!

The recommendations of the conference were aimed at environmental sustainability, provision of clean drinking water and the pointer that road towards progress are the vision of tomorrow. Successful environmental sustainability and global water initiative are in the process of new scientific vision. Provision of clean drinking water stands as a major prerogative of successful sustainable development in developed and developing countries. Environmental pollution control, industrial wastewater treatment, and veritably drinking water treatment in today's world are at a disastrous state with devastating end. History of science needs to be restructured at this crucial juncture. Environmental sustainability is in a disastrous state of immense distress. History of human civilisation is at veritable crossroads. Man's vision, as well as a scientist's progress is in the process of re-envisioning with every step of progress. Dr. Ravi Toteja, Dr. Seema Makhija and the entire team are to be commended for their laudable efforts for organising the event with perfection and precision.

ACHARYA NARENDRA DEV COLLEGE

NAAC Grade 'A' | NIRF Ranking 2021 – #20 | DBT STAR College

celebrates ***Science Week*** with

International e-Conference on

Mitigating Contemporary Environmental issues by Sustainable Approaches [ICMCESA – 2022]

February 22 – 28, 2022

under the aegis of IQAC & DBT STAR College Scheme

About the Conference

UN mandated "Decade of Action" has already begun from the year 2020 with an aim to deliver the Sustainable Development Goals by 2030. This decade long endeavour is assigned to promote the shared vision of nations and proffer multipronged accelerated responses to one of the world's most serious challenges – reversing climate change. The main focus of the conference is to generate interest amongst all to concentrate on the burning issue of environmental mitigation through proactive uptake of sustainable approaches. It is in line with the global scenario wherein the latest developments occurring in the field of environmental monitoring & assessment have generated intense research in all branches of science (Biological, Chemical and Physical). The field of contemporary environmental issues demand affirmative action in fields including but not limited to biodiversity conservation/reclamation and environmental toxicology. Creation of sustainable cities through strict laws and policies for environmental protection while assessing environment status via GIS mapping and remote sensing comprise the basic step forward. Pioneering ideas of adoption of environmental economics and eco-preneurship constitute another important phase. Worldwide scientific findings necessitate that there is an urgent need to ignite young minds to think out-of-the-box and in an innovative manner to help stoke interest in environmental sensitization. The International e-Conference on Mitigating Contemporary Environmental Issues by sustainable approaches envisions to make available a platform for free exchange of ideas for the same.

Call for Abstracts

Abstracts are invited from UG/PG/Research Scholars/Faculty for oral/poster presentations having a maximum of 250 words, in Times New Roman 12 point font (1.5 line spacing). Title, author name, and affiliation should be in separate lines and are to be centered. The presenting author's name should be underlined. E-mail address of the corresponding author should be given. The abstract should be sent as an attachment in MS word format by e-mail to: icmcesa@andc.du.ac.in

Awards for outstanding presentation will be given to the participants

Abstracts will be accepted after peer-review and acceptance will be conveyed by e-mail.

Abstract submission details and registration form is available on the college website – http://andcollege.du.ac.in. Abstract(s) and Registration form should be sent as attachment in Word format by e-mail to: icmcesa2022@andc.du.ac.in. Selected full-length papers will be published in Proceedings with ISSN/ISBN numbers (extra charge Rs. 1500/- OR USD 60).

Themes and scope of conference

1. Environmental assessment
2. Environmental mitigation by physical, chemical and biological approaches
3. Biodiversity conservation and reclamation
4. Laws and policies for environmental protection
5. GIS mapping and remote sensing for environmental assessment
6. Environmental toxicology
7. Sustainable cities and communities
8. Environmental economics and eco-preneurship
9. Igniting young minds for environmental sensitization
10. Data analytics in environment
11. Green finance
12. Environment & Health

128.	Dr. Savita	Assistant Professor	Department of Botany, Hindu College, University of Delhi
129.	Harsha Rohira	Project Associate	Acharya Narendra Dev College, University of Delhi
130.	Dr. Sandeep Kumar Goel	Associate Professor	Acharya Narendra Dev College (University of Delhi)
131.	Dr.A.Sunil kumar	Lecturer, Department of zoology	Girraj Government college(A),Nizamabad
132.	Priyanka Jattan	Student	Dr. Y.S. Parmar University Of Horticulture and Forestry, Solan
133.	SUNIL KAYESTH	Associate Professor	Deshbandhu college, University of Delhi
134.	Kanchan Kundlas	Student	Dr YS Parmar University of Horticulture and Forestry Nauni, Solan 173230
135.	Tupti Sumam	PG Student	Nizam college, Osmania University, Telangana
136.	Harsha	Ph. D. Scholar	Acharya Narendra Dev College
137.	Helianthous Verma	Assistant Professor	Ramjas College, University of Delhi
138.	Arijit Chowdhuri	Professor	Acharya Narendra Dev College, University of Delhi
139.	Mrityunjoy	Student	Acharya Narendra Dev College
140.	Dr. Anupama Shukla	ASSOCIATE PROFESSOR	ACHARYA NARENDRA DEV COLLEGE
141.	Mamta saini	Student	SKV H - block Ashok vihar ph-I
142.	MAJHAR ALAM	Research scholar	Department of mathematics, University of Delhi
143.	Mohd Afham	Student	Acharya narendra Dev college
144.	Vridhi Singh	Student	Acharya Narendra Dev College, University of Delhi
145.	Amartya Sinha	UG Student	Acharya Narendra Dev College, University of Delhi
146.	Kavita Mittal	Assistant Professor	Acharya Narendra Dev College
147.	Dasari Prasanna	Assistant Professor	Government Degree College for women Begumpet Autonomous Hyderabad

97.	Shruti Jain	Student	Acharya Narendra Dev College, University of Delhi
98.	Prof PANKAJ KHANNA	Professor	Department of Chemistry, Acharya Narendra Dev College, University of Delhi
99.	Tishya Thukral	Undergraduate Student	Acharya Narendra Dev College
100.	Rahul Basu	Undergraduate Student	Acharya Narendra Dev College
101.	Soni Rani	Research Scholar	Hindu College, University of Delhi
102.	Kajal Jindal	Assistant Professor	DEPARTMENT OF PHYSICS, KIRORI MAL COLLEGE, UNIVERSITY OF DELHI
103.	Sharanjit Kaur	Associate Professor	Acharya Narendra Dev College
104.	Sagar Bisht	student	Acharya Narendra Dev College
105.	Jyoti Taneja	Assistant Professor	Daulat Ram College
106.	Laishram Saya	Faculty	Sri Venkateswara College
107.	Rashmi Thukral	Professor	Acharya Narendra Dev College, University of Delhi
108.	Drashya Gautam	Senior Research Fellow	Acharya Narendra Dev College
109.	Somya Singh	Student	Acharya narendra dev college
110.	ANAMIKA YADAV	Research scholar	Department of Zoology, Ramjas college, University of Delhi, Delhi
111.	Paul Joshi	Evironmental Science Post-graduate	Central University of Kerala
112.	Rupali Pandey	PhD Scholar	University of Delhi
113.	Ripamchi Sangma	Research Scholar	Tura Government College, Tura
114.	Rahul Raj M	UG Student	Ramjas College, University of Delhi
115.	Dr. Harikishni Nain	Associate Professor	Bharati College, Delhi University
116.	SRUTHI S. KUMAR	STUDENT	ACHARYA NARENDRA DEV COLLEGE
117.	RAHUL KUMAR	ASSISTANT PROFESSOR	DEPARTMENT OF ZOOLOGY, SHEODENI SAO COLLEGE (MAGADH UNIVERSITY), KALER
118.	Pushkar Pandey	Student	Allahabad State University
119.	SUNITA HOODA	Professor	ACHARYA NARENDRA DEV COLLEGE
120.	Dr Sharda Pasricha	Associate Professor	Department of Chemistry, SV College, New Delhi
121.	Mohd Mukhtar Ansari	Student	Acharya Narendra Dev College
122.	Shijith Puthan	Assistant Professor	Mahatma Gandhi Government Arts

148.	Vibha Gaur	Professor	Acharya Narendra Dev Collge, University of Delhi
149.	siddhartha	Assistant Professor	Department of Physics, ACHARYA NARENDRA DEV COLLEGE University Of Delhi 110019
150.	RAJAT SHARMA	STUDENT	ACHARYA NARENDRA DEV COLLEGE, UNIVERSITY OF DELHI
151.	Dr. Pragya Gahlot	Assistant Professor	Sri Venkateswara College, University of Delhi
152.	Anju	Student	Department of electronics science
153.	Kishore Mendam	Resersch Scholar	Osmania University
154.	Anita Narang	Associate Professor	Acharya Narendra Dev College
155.	subhasree swagatika mohanty	pH.D Scholar	Berhampur University
156.	Amit	Student	ACHARYA NARENDRA DEV COLLEGE (University Of Delhi)
157.	Ramit Yadav	Student	ACHARYA NARENDRA DEV COLLEGE (University Of Delhi)
158.	Dyuti Agrawal	Student	Amity University
159.	Ayushi Sharma	College Student	Acharya Narendra Dev College, University of Delhi
160.	Kanika Nadar	PhD scholar	Acharya Narendra Dev College, University of Delhi
161.	Ritu Arora	PhD scholar	Acharya Narendra Dev College, University of Delhi
162.	Shashi Chawla	Faculty	Gargi College, University of Delhi
163.	Harsh Bamotra	College Student	Acharya Narendra Dev College, Delhi University
164.	Tanisha Sharma	Student	Acharya Narendra Dev College
165.	Nishu Singh	Assistant professor	ANDC
166.	Prof. Monika Bansal	Professor	Deen Dayal Upadhyaya College, University of Delhi
167.	Dr Charu Kalra	Assistant Professor	Department of Botany, Deen Dayal Upadhyaya College, University Of Delhi
168.	Ankush Singh	B.Sc.(H) Zoology	Deen Dayal Upadhyaya College, University of Delhi
169.	Dr Charu Kalra	Assistant Professor	Department of Botany, Deen Dayal Upadhyaya College, University Of Delhi
170.	Dr. Monika Bhattacharya	Assistant Professor (adhoc)	Acharya Narendra Dev College, University of Delhi
171.	DEO DATTA AARYA	Assistant Professor	Acharya Narendra Dev College (University of Delhi)
172.	ITENDRA	Research Scholar	University of Delhi.

Seema Mukhija

Topic: 6th Annual International e-Conference on International Network of Soil Contamination Research-INSCR2021 on "MICROBES IN SUSTAINABLE DEVELOPMENT"

Co-Organizers:PG Department Zoology (Magadh University), Department of Zoology, (University of Delhi), Acharya Narendra Dev College (University of Delhi), Deen Dayal Upadhyay College (University of Delhi), Maitreyi College (University of Delhi), Ramjas College (University of Delhi), Kirori Mal College (University of Delhi), Sri Venkateswara College (University of Delhi), CMP College (Allahabad University) and Phixgen Pvt Ltd.

Co-Patron: Prof. Ravi Toteja (Officiating Principal, Acharya Narendra Dev College)

Organizing Secretary (from ANDC): Prof. Seema Makhija

Organizing Committee Members (from ANDC):Dr Vineet Kumar Singh and Dr Sumit Sahni

Date: November 15-18, 2021

No. of Participants: 250

Report:

In January 2016, the 2030 Goals for Sustainable Development were set by the United Nations to achieve environmental, social and economic development through green methods and clean production technologies. The most important aim of these goals is the fulfilment of basic human needs and wants, as the essential human needs such as food, clothing, shelter and health care are still not available to most people, despite the rapid growth in the world economy. The increase in waste products and depleting natural resources have turned human attention towards efficient green and clear production technologies. The Sustainable Development Goals aim to provide these basic needs for all, through the intelligent use of sustainable science. In this perspective, microorganisms, which are vital for sustaining life on Earth, can play a major role. Keeping in view about the role of microbes in sustainable development, INSCR organized 6th International Conference over the virtual platform. Prof. P. C. Joshi, former Vice Chancellor, University of Delhi and Prof. Balram Pani, Dean of Colleges, University HOD, Zoology, Magadh University, Dr Sanjay Kumar, Director CISR Palampur Himachal Pradesh, Dr Umesh Rai, former Head of Zoology Department, University of Delhi, besides the principals of co-organizing colleges.

The event hosted 30 International and 40 National speakers of international repute. A few of them are: Edward DeLong, University of Hawaii, Honolulu; Prof. Jizhang Zhou, University of Oklahoma, USA; Prof. Kenneth Timis, Germany; Hilary Lapin Schott and Prof. Jack Gilbert, University of California; Daniel Macdonald, University of California; Hock Midt, Netherlands; Hans, Germany.

H Reknow, New Zealand's Stephen Craig Carey, America's NASA Program Scientist Mitch Schalte, South Korea's Vipin C Kalia of Konkuk University, Korea's Ganesh de Sartale, Poland's Agnizeka Dybala Defratka, Uruguay's PavloScavone, Prof. Jyoti Prakash Tamang of Sikkim University, INDIA, Prof. Rama Chaudhary of AIIMS Delhi, INDIA. Anushree Malik of IIT Delhi, INDIA and others who enlighten about the role of microbes in sustainable development.

Two Pre conference workshops namely, Art of scientific writing and communication, and Hands on to computational Biology, for (Meta)genomic analysis were also organized for Undergraduate, Postgraduate students and research scholars from November 14-15, 2021. An online Agar Competition was also organized that show active participation from all over the country.

Themes covered in this conference were:

a. Host Microbiota Interactions
b. Clinical Microbiology and Infectious Diseases
c. Microbes for Sustainable Agriculture
d. Translational and Industrial Microbiology
e. Microbial Ecology and Biotechnology
f. Microbiology of Extreme Environments
g. Empowering academics through Innovative Research

During the conference, undergraduate, postgraduate students, research scholars and faculty members presented their research papers on host microbiota interactions, clinical microbiology and infectious disease, microbes for sustainable agriculture, microbial ecology and biotechnology, microbiology of extreme environment and translation and industrial microbiology under the main themes Microbes in Sustainable Development.

The Conference was a great success with a record total of more than 500 attendees and 138 registered participants. During the conference three parallel sessions were conducted to accommodate 80 poster and more than 70 oral presentations by students and faculty across the globe. The conference concluded with a valedictory session, in which the participants were acknowledged, winners for poster and oral presentations were announced, winners for Agar Art competition were announced and INSCR Journal was released. The chief guest for the valedictory

session was Dr Paola Scavone and the Guest of Honor was Prof. BalaramPani, Dean of Colleges, University of Delhi.

सेमिनार • चार दिवसीय छठा इंटरनेशनल ई-कांफ्रेंस के दौरान अंतिम सत्र में जर्मनी टेक्निकल विवि के प्रो केनेथ टिम्मिस ने कहा

सामाजिक क्षमता निर्माण को माइक्रोबायोलॉजी में साक्षरता जरूरी, इससे नीतिगत निर्णय होंगे प्रभावी

एजुकेशन रिपोर्टर | बोधगया

माइक्रोबायोलॉजी लिटरेसी इनिशिएटिव अर्थात माइक्रोबायोलॉजी फॉर साइंस एंड सोसाइटी का उद्देश्य समाज में, हमारे दैनिक जीवन को प्रभावित करने वाली सूक्ष्मजीवविज्ञानी प्रक्रियाओं की गहन समझ और स्थिरता के विभिन्न पहलुओं के लिए उनके महत्व को स्थापित करना है। इसके तहत रोग और स्वास्थ्य, पोषण और खाद्य उत्पादन में सूक्ष्म जीव विज्ञान शामिल है। माइक्रोबायोलॉजी फॉर साइंस एंड सोसाइटी सेक्शन के तहत जर्मनी टेक्नीकल विवि के प्रो केनेथ टिम्मिस ने माइक्रोब्स इन सस्टेनेबल डेवलपमेंट पर चार दिवसीय छठा इंटरनेशनल ई-कांफ्रेंस के दौरान अंतिम सत्र में उक्त बातें कही। इंडियन नेटवर्क फॉर स्वॉयल कंटेमिनेशन रिसर्च दिल्ली ने इसका आयोजन किया व पीजी डिपार्टमेंट ऑफ जूलोजी मगध विवि, दिल्ली विवि सहित अन्य संस्थान सह आयोजक हैं। उन्होंने कहा कि समुद्री पारिस्थितिकी तंत्र और पर्यावरण परिवर्तन और यहां तक कि कैसे रोगाणु हमारे मूड और व्यवहार को नियंत्रित करते हैं, इन विषयों को एक एकीकृत, परस्पर और अनुभवात्मक तरीके में पढ़ाकर दक्षताओं को स्थापित करना है। इस तरह सामान्य जानकारी के महत्वपूर्ण मूल्यांकन के लिए एक सामाजिक क्षमता का निर्माण करना है। यह स्थापना, कपंण लाभ और भ्रामक सूचनाओं के प्रभाव का प्रतिकार करने के प्रयासों का भी समर्थन करेगा जो हमारे दैनिक जीवन में तेजी से व्यापक होता जा रहा है। इंगलैंड के एसेक्स विवि के प्रो टेरी मैक्जेन्टी, भारत के प्रो रूपलाल सहित अन्य ने शोधपत्र पढ़ा।

स्कूलों में सूक्ष्म जीव विज्ञान के शिक्षण के लिए नई सामग्री प्रदान करना है

इंटरनेशनल कॉन्फ्रेंस के बाद आयोजक समिति के सदस्य।

पृथ्वी के सब-सरफेस में हजारों साल जीवित रह सकते हैं माइक्रोब्स

किण्वनिकल माइक्रोबायोलॉजी सेशन के तहत प्रो करेन लॉयड ने अननोन माइक्रोब्स इन अर्थ सब-सरफेस शोध पत्र में कहा कि सतह के पास, जीवित जीव कार्बनिक पदार्थों का उपभोग करते हैं और ऑक्सीजन का सांस लेते हैं। नीचे की ओर, ये उपलब्ध नहीं हैं, इसलिए वे हाइड्रोजन (विभिन्न रासायनिक प्रक्रियाओं द्वारा चट्टानों से मुक्त), मीथेन, सल्फर यौगिकों और अमोनियम जैसे इलेक्ट्रॉन दाताओं का उपयोग करते हैं। वे नाइट्रेट और नाइट्राइट, मैंगनीज और आयरन ऑक्साइड, ऑक्सीकृत सल्फर यौगिकों और कार्बन डाइऑक्साइड जैसे इलेक्ट्रॉन का सांस लेते हैं। अधिक गहराई पर बहुत कम ऊर्जा होती है, इसलिए चयापचय सतह की तुलना में दस लाख गुना धीमा होता है। कोशिकाएं विभाजित होने से पहले हजारों वर्षों तक जीवित रह सकती हैं और उनकी आयु की कोई ज्ञात सीमा नहीं है।

स्कूल जीवन से ही अध्ययन जरूरी

प्रो केनेथ टिम्मिस ने कहा कि इस पहल का उद्देश्य स्कूलों में सूक्ष्म जीव विज्ञान के शिक्षण के लिए नई सामग्री प्रदान करना है, ताकि एक ऐसे समाज का निर्माण किया जा सके, जो सूक्ष्म जीव विज्ञान के प्रमुख पहलुओं में साक्षर हो, जो ज्ञान-आधारित रोजमर्रा के पारिवारिक निर्णयों के साथ-साथ क्षेत्रीय, राष्ट्रीय और वैश्विक नीतिगत निर्णयों को प्रभावित करने वाले हों। इसका उद्देश्य माइक्रोबायोलॉजिस्ट बनाना नहीं है, बल्कि बच्चों की कल्पना को पकड़ने के लिए, बाल-केंद्रित और प्रासंगिक विषयों जैसे भोजन, जानवरों, छुट्टियों आदि से निपटने के लिए जानकारी देना है।

अंटार्कटिका का माइक्रोबियल इकोसिस्टम बचाएं

कांफ्रेंस के तीसरे दिन माइक्रोबायोलॉजी इन एक्सट्रीम एनवायरमेंट सेक्शन के तहतबाइकाटो विश्वविद्यालय, न्यूजीलैंड के डॉ. क्रेग कैरी ने इस चरमपंथी वातावरण में माइक्रोबायोटा और माइक्रोबियल पारिस्थितिकी को उजागर करने के लिए अंटार्कटिक क्षेत्र में किए गए शोधों की जानकारी दी। डॉ. हीके स्मिड्ट ने हैलोजन साइकलिंग के चालकों में गहरी अंतर्दृष्टि प्राप्त करने के लिए प्रदूषित और प्रदूषित वातावरण में अन्वेषण के बारे में बात की।

समापन सत्र में विजेताओं की हुई घोषणा

सम्मेलन का समापन एक समापन सत्र के साथ हुआ, जिसमें पोस्टर और मौखिक प्रस्तुतियों के लिए विजेताओं की घोषणा की गई। आगर कला प्रतियोगिता के विजेताओं की भी घोषणा की गई और आईएएसमीआर जर्नल का विमोचन किया गया। समापन सत्र के मुख्य अतिथि डॉ. पाओला स्कावोन थे और विशिष्ट अतिथि दिल्ली विवि के डीन ऑफ कॉलेजेज प्रो. बलराम पाणि थे। आयोजन में मगध विवि जूलॉजी विभाग के डा रोशन कुमार की महत्वपूर्ण भूमिका रही।

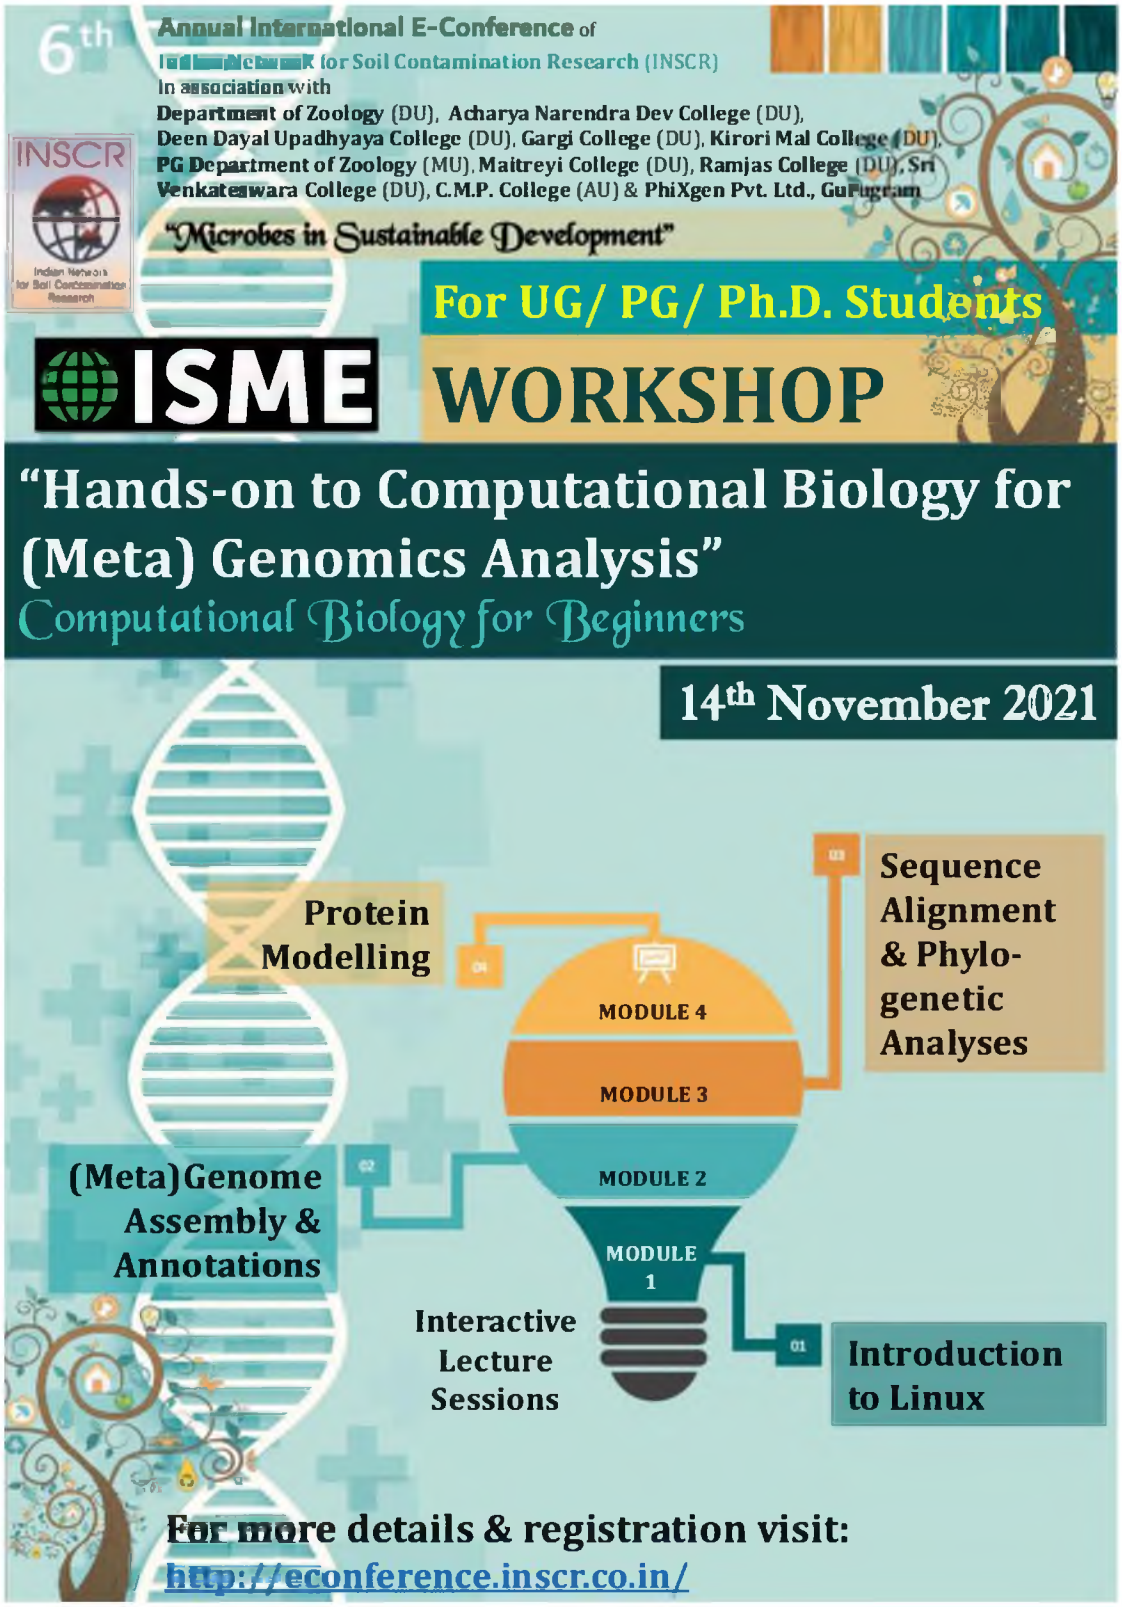
250	Aditi Raj, Dev Bhoomi Uttarakhand University

Two workshops were also organized during the Conference:

Title: Workshop on Computational Biology for Metagenomics

Date: November 14, 2021

Number of Participants: 35



Resource Person: Dr Utkarsh Sood (+91 99999 13310), Dr Gauri Garg (+91 98118 82312) and Dr Princy Hira (9711070176)

Report:

An Intercollege workshop was organised for undergraduate, postgraduate and Research scholars under the aegis of INSCR and ISME. The students were introduced for the following four modules through interactive lecture sessions:

- **Module I**: Introduction to Linux
- **Module II**: Metagemoe assembly and Annotations
- **Module III** Sequence Alingnment and Phylogenetic analysis
- **Module IV** Protein Modelling

The workshop benefitted the students as they could learn Basics of Computational Biology

6th
Annual International E-Conference of
Indian Network for Soil Contamination Research (INSCR)
In association with
Department of Zoology (DU), Acharya Narendra Dev College (DU),
Deen Dayal Upadhyaya College (DU), Gargi College (DU), Kirori Mal College (DU),
PG Department of Zoology (MU), Maitreyi College (DU), Ramjas College (DU), Sri
Venkateswara College (DU), C.M.P. College (AU) & PhiXgen Pvt. Ltd., Gurugram
"Microbes in Sustainable Development"

Number of Participants: 125

Resource Persons: Mr Ayush Mishra (+91 94521 65398), Mr Vaibhav Thapliyal (+91 95207 83447), Mr Yash Vermani (+91 99107 29880), Ms Avnija Tyagi (+91 83750 63068)

Report:

Bootcamp 1.0 was organized for the College students to train them to build digital content on web i.e. web pages. These pages will also be used for the V-Lab experiment's content page. The topics covered during the workshop were:

(1) HTML- History and Features, Tags, Special characters, linking images and videos, Internal and external Linking, Working with DOM elements of HTML

(2) CSS- Animations, Applying properties to DOM (shadow, font size, font family, padding, margin, color, background, display, position, border radius, table)

(3) JavaScript- Basic Introduction, Objects, Elements, Data Types, Keywords, Looping Constructs, Functions, Animations using Event Listeners

Daily Quizzes were conducted based upon the topics taught in addition to assignments.About 240 students participated in this Bootcamp. The camp was a great success.

Title: Workshop on "Initiating Virtual labs @ ANDC"

Date: August 24, 2021

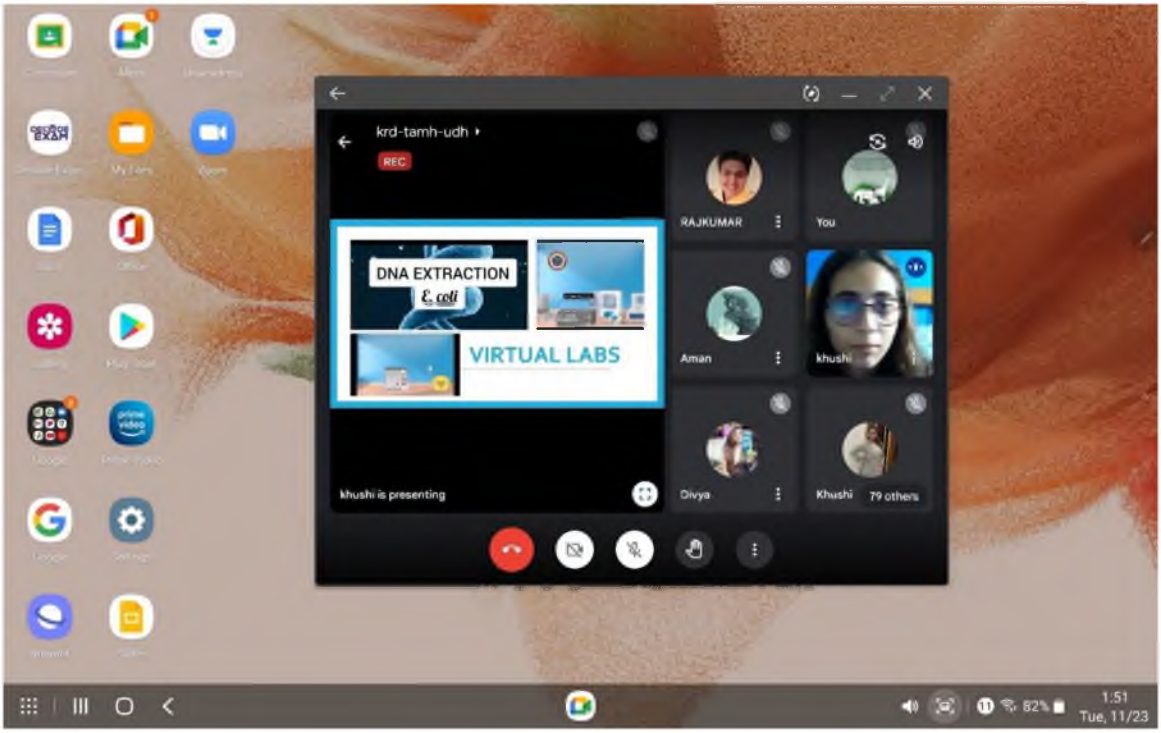
Resource Persons: Prateek Sharma (9873266626) and Tanmay Das (9891646324)

Number of Participants: 74

Report:

Workshop on "Initiating Virtual labs @ ANDC" was organized on August 24, 2021 in collaboration with IIT Delhi. The workshop was very well attended by faculty and students of ANDC where IIT Delhi agreed to make ANDC as Nodal Center for Virtual Labs. Virtual lab (V-lab) was set up at ANDC to provide remote access of various labs to the undergraduate science students through internet under the aegis of DBT-STAR scheme. The V-Lab@ANDC is being coordinated by Prof. Seema Makhija, Dr. Sumit Sahni and Dr. Vineet Kumar Singh. Acharya Narendra Dev College is the first college in the University of Delhi to start V-Lab at its campus.

Acharya Narendra Dev College conceptualized the idea of Virtual lab (V-Lab) to provide remote access of various labs to the undergraduate science students through the internet, and thus became the first college in the University of Delhi to start V-Lab at its campus. Virtual lab allows the student to understand, learn and perform the practical on their own remotely with a click of the mouse. It provides a complete Learning Management System (LMS) where students can avail the various learning, including additional web-resources, video-lectures, animated demonstrations and self-evaluation. Web enabled experiments have been designed for remote operation and viewing so as to enthuse the curiosity and innovation into students. This would help them in learning basic and advanced concepts through remote experimentation.



The course structure of various labs and experiments available on V-Lab@ANDC is futuristic, following a four quadrant model for e-content, and is developed considering the National Education Policy (NEP)-2020. V-Lab@ANDC website is created and maintained by our own students for four domains i.e. Biological Science, Chemical Science, Electronics and Physical Science which include seven departments i.e. Biomedical Science, Botany, Chemistry, Computer Science, Electronics, Physics and Zoology.

Although the V-Lab@ANDC was initiated to tackle the COVID related problems in teaching and learning process but is not confined to it. Students now can perform their experiments 24X7, on

even sophisticated and expensive instruments, multiple times and at their ease without wasting the resources and can even generate the measured data for at least a few experiments.

Through V-Lab@ANDC we are proving the ideology of our college 'Preparing for the future' by exploring and innovating 'Beyond the classroom' or rather 'Beyond the Practical Lab'. The lab is developed under four domains:

Biological Science: Developed by the Department of Biomedical Science, Botany and Zoology
Chemistry: Developed by the Department of Chemistry
Computer Science: Developed by the Department of Computer Science
Physical Science: Developed by the Department of Electronics and Physics

WORKSHOP REPORT OF VIRTUAL LABS

An online Workshop on Virtual Labs was organized successfully on **24/08/2021** for **Acharya Narendra Dev College, University Of Delhi,** for Faculty members & Students from various disciplines (**Applied Sciences, CSE, ECE/EE, Biotech, Civil and ME**) by Virtual Labs team, IIT Delhi. Virtual Labs mentors for this workshop were **Mr. Tanmay Das, Mr. Prateek Sharma & Mr. Shivam Sundaram.** Total of **42** Faculty members & **43** Students attended the workshop. The detailed report of the workshop is given below:

Session	Time	Discipline	Labs / Experiments Demonstrated	No of Students attended (X)	No of Faculties attended (Y)
1	04:00 - 05:30	CS, Electronics, Biomedical Sciences, Botany, Zoology, Physics, Chemistry, Mathematics & Applied Sciences	• Molecular Fluorescence Spectroscopy Lab • Digital Electronics Lab-I • Solid State Physics Virtual Lab • Image Processing Lab • Cell Biology Virtual Lab I • Molecular biology Virtual Lab I • Analog Electronics Lab • Inorganic Chemistry Virtual Lab • Python Programming Lab • Transportation Engineering Lab	43	42
			Total attendees (X+Y)	**85**	

**NOTE: Photographs of this workshop will be submitted separately.*

Organizing Committee: Department of Zoology & Department of Biomedical Sciences, ANDC

Date: September 27-October 4, 2021

No. of Participants: 32

Resource Person: Faculty members of Zoology Department - Prof Sarita Kumar (9810309912), Prof Monisha Khanna (9810763211), Prof Ravi Toteja (9811675982), Prof. Seema Makhija (9136563762), Mr Ravinder Sagar (9711115176), Dr Aparna Sharma (9871013149), Dr Sweety Shrimali (9818540058), Dr Rahul Dev (9873087811), Dr Neelgagan Singh (8882006671), Dr Shrankhla (9997926822), Mr Vineet Girdharwal (9456095779), Mr Abhay Pratap Singh (9891274760), Mr Sanjay Kumar (8010550990)

Prof Urmi Bajpai (+91 98112 99719) (Department of Biomedical Sciences) and

Mr Vikas Sachdev (+91 98687 40625), Technical Officer, AIIMS, New Delhi

Report:

Organized six days Hands-on workshop on B[iological Techniques under the aegis of DBTSTAR College Scheme and IQAC from September 27 –October 4, 2021.During this workshop, students were given hands on experience for the preparation of LB Media, Blood group determination. SDS-PAGE and ELISA etc.

The Department aims to impart practical Knowledge of Molecular Biology and Immunology to III rd Year UG students. Molecular Biology practical involves practical knowledge of raising, handling, maintenance and special features such as antibiotic resistance of a simple prokaryotic model organism, *Escherichia coli* and Quantitatively estimation of DNA by colorimetric methods.Immunology practical involves determination of Blood Group Types, Ouchterlony's double immuno-diffusion method and study of different types of blood cells in blood film.

To fulfill this in the available short period, Department is planning to organize 6 days workshop for undergraduate students.

The Schedule of the Workshop is as follows:

Day	Time	Techniques	Resource Person	Technical Staff

September 27, 2021	9:00am-12:00pm	Visit to Research Laboratories	Prof Sarita Kumar, Prof Urmi Bajpai, Prof Monisha Khanna, Prof Ravi Toteja	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
September 27, 2021	1:00pm-4:00pm	Preparation of liquid and solid culture medium (LB)/ SDS PAGE/ Agarose Gel Electrophoresis	Prof. Seema Makhija Dr Rahul Dev	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
September 28, 2021	9:00am-12:00pm	Blood Group Determination Preparation of stained blood film	Mr Ravinder Sagar Mr Abhay Pratap Singh	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
September 28, 2021	1:00pm-4:00pm	Inoculation of *E.coli*	Dr Rahul Dev	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma,

		into liquid media. Plating of *E.coli* by streaking and spreading method	Mr Vineet Girdharwal	Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
September 29, 2021	9:00am-12:00pm	Preparation of Polytene Chromosome	Prof Ravi Toteja Dr Neelgagan Singh	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
September 29, 2021	1:00pm-4:00pm	Estimation of the growth kinetics of *E. coli* by turbidity method.	Dr Rahul Dev Dr Shrankhla	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
September 30, 2021	9:00am-12:00pm	Demonstration of antibiotic sensitivity /resistance of *E. coli*	Dr Rahul Dev Prof Seema Makhija	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra

				Ms Kanika Chaddha (Musem Curator)
September 30, 2021	1:00pm-4:00pm	Quantitative estimation of salmon sperm/calf thymus DNA using colorimeter	Dr Rahul Dev Mr Sanjay Kumar	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
October 1, 2021	9:00am-12:00pm	Ouchterlony's double immuno-diffusion method	Dr Sweety Shrimali Dr Aparna Sharma	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)
October 1, 2021	1:00pm-4:00pm	PTC Test	Dr Aparna Sharma Dr Sweety Srimali	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)

October 4, 2021	9:00am-4:00pm	ELISA	Mr Vikas Sachdev, Technical Officer, AIIMS, New Delhi	Mr Sachidanand Misra, Mr Sanjeev, Mr Tara Dutt Sharma, Mr Pramod Bhatt , Mr Jai Prakash, Mr Vikas Sharma, Mr Sagar, Mr Mahesh, Mr Harshal, Ms Sumitra Ms Kanika Chaddha (Musem Curator)

Topic: Hands-on workshop on Tools and Techniques of Biotechnology

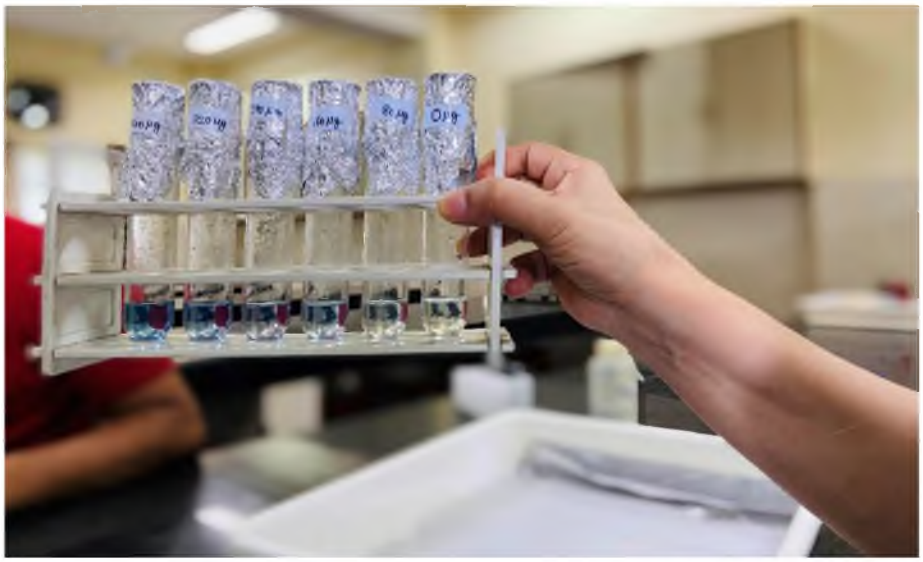
Organizing Committee: Dr Monisha Khanna and Dr Seema Makhija

Date: April 7-8, 2022

Number of Participants: 65

Resource Person: Faculty members of Zoology Department - Prof Sarita Kumar (9810309912), Prof Monisha Khanna (9810763211), Prof Ravi Toteja (9811675982), Prof. Seema Makhija (9136563762), Mr Ravinder Sagar (9711115176), Dr Aparna Sharma (9871013149), Dr Sweety Shrimali (9818540058), Dr Rahul Dev (9873087811), Dr Neelgagan Singh (8882006671), Dr Shrankhla (9997926822), Mr Vineet Girdharwal (9456095779), Mr Abhay Pratap Singh (9891274760), Mr Sanjay Kumar (8010550990)

Report:



Two days Hands-on workshop on **Tools and Techniques of Biotechnology** under the aegis of DBTSTAR College Scheme and IQAC from April 7-8, 2022 was organized by Department of Zoology, ANDC. During this workshop, students were given hands on experience for DNA isolation, Agarose Gel Electrophoresis, PCR, Haemoglobin estimation, BP measurement and Southern Blotting.

A workshop on tools and techniques of molecular biology could cover a range of topics related to the methods and equipment used in molecular biology research. Topics covered in the workshop were:

1. DNA extraction and purification: Techniques for extracting DNA from various bacteria
2. PCR (polymerase chain reaction): An overview of the basic principles of PCR, including primer design, amplification, and detection.
3. Gel electrophoresis: Techniques for separating DNA or protein samples based on size or charge using gel electrophoresis, including agarose and polyacrylamide gel electrophoresis.
4. Southern Blotting

Topic: Hands-on Training on Tools in Modern Biology

Organizing Committee: Dr Seema Makhija and Dr Monica Misra

Date: April 21, 2022

Number of Paticipants: 12

Resource Person: Dr Rahul Dev (9873087811), Dr Neelgagan Singh (8882006671), Mr Vineet Girdharwal (9456095779) and Dr Seema Makhija (9136563762).

Report:

Organized Hands-on Training on **Tools in Modern Biology** was organized for the support staff to familiarize them with the new equipment purchased under the STAR Scheme.

Dr Ved Prakash gave an insight into the microscope maintenance to the Non teaching Staff. He also demonstrated how microscopes should be handled and cleaned regularly,

Dr Rahul Dev explained the working and maintenance of autoclave and UV-VIS . He did hands on training for the staff to explain them the usage of UV-VIS Spectrophotometer.

Dr Neelgagan Singh and Mr Vineet explained the working and maintainence of Laminar Flow.

Topic: Environmental Hazards of e-waste and Plastic waste

Organizing Committee: Dr Rashmi Sharma, Dr Archna Pandey, Prof Seema Makhija

Date: July 31, 2021

Number of Participants: 79

Resource Person: Mr Jai Kumar Gaurav (9811808661)

Report:

Webinar on Environmental Hazards of e-waste and Plastic waste was organized by Department of Biomedical Science, Botany and Zoology. The talk was held on July 31, 2021 in online mode by Mr Jai Kumar Gaurav Senior Advisor climate change and circular economy, GIZ india. He explained to the gathering about pollution created by the electronic devises and plastic material.

Jai Gaurav delivered a talk on the environmental hazards of e-waste and plastic waste. He emphasized that the increase in electronic devices and plastic products has led to a significant increase in waste production, which has caused severe environmental issues globally.

Firstly, Jai Gaurav spoke about e-waste, which refers to discarded electronic devices such as computers, mobile phones, televisions, and other electrical appliances. He pointed out that the improper disposal of e-waste can lead to severe environmental problems, such as pollution of the soil, air, and water. He explained that e-waste often contains toxic substances such as lead, mercury, and cadmium, which can leach into the environment and cause contamination. Furthermore, he emphasized that the e-waste recycling process can also be hazardous, as it involves burning or shredding the electronic devices, which can release harmful chemicals into the environment.

Next, Jai Gaurav discussed plastic waste, which he argued is one of the most significant environmental problems globally. He highlighted that plastic waste takes hundreds of years to decompose and often ends up in landfills or the ocean, where it poses a severe threat to wildlife. He pointed out that plastic waste can break down into tiny particles known as microplastics, which can enter the food chain and have adverse effects on human health.

Jai Gaurav also discussed the need for individuals and organizations to take action to address these environmental hazards. He suggested that people could reduce their e-waste and plastic waste by

using products for a longer time, repairing them instead of buying new ones, and properly disposing of them when they are no longer needed. He also highlighted the importance of recycling and emphasized the need for governments to implement policies that encourage the proper disposal of e-waste and plastic waste.

Overall, Jai Gaurav's talk highlighted the severe environmental hazards of e-waste and plastic waste and stressed the need for individuals, organizations, and governments to take action to address these problems.

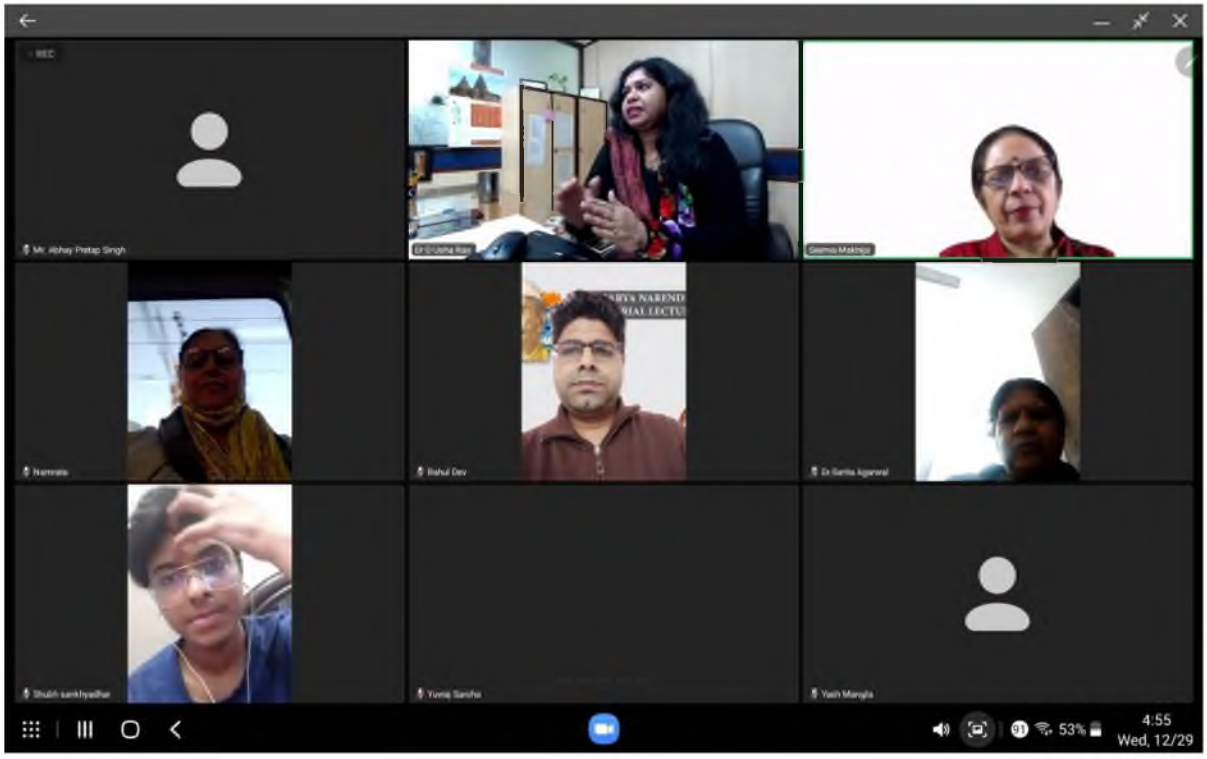
Topic: IPR Awareness Training Program

Date: December 29, 2021

Number of Participants: 89



Resource Person: Dr Usha Rao (9911162584)

Report:

An IPR Awareness/Training Program was organized under the National Intellectual Property Awareness Mission by the Intellectual Property Office, India. The event was organized in online mode by the Department of Zoology, The speaker for the program was Dr Usha Rao Assistant Controller of Patents and Designs Intellectual Property Office.

Dr. Usha Rao conducted a talk on Intellectual Property Rights (IPR) Awareness Program, which was insightful and informative. The talk was held to educate individuals about the importance of protecting their intellectual property and to raise awareness of the legal framework and processes related to IPR.During the talk, Dr. Usha Rao emphasized the significance of IPR protection for individuals and organizations to safeguard their innovations, creations, and ideas from infringement by others. She explained how IPR includes patents, trademarks, copyrights, and trade secrets, which offer exclusive rights to the owners over their intellectual property. Furthermore, Dr. Rao discussed the various legal procedures involved in obtaining and enforcing IPR. She explained the importance of conducting a thorough search to ensure that the idea is unique and not infringing on any existing IP rights. Dr. Rao also provided examples of the various steps involved in the patent application process, including drafting and filing the application, prosecution, and maintenance. Additionally, Dr. Rao highlighted the significance of IP protection in the digital age, where IP infringement is prevalent due to the ease of digital copying and dissemination. She stressed the importance of cybersecurity measures to protect IP and discussed how digital watermarking can help in identifying the origin of digital copies.

In conclusion, Dr. Usha Rao's talk on IPR Awareness Program was insightful and informative. It provided a comprehensive overview of the legal framework and processes related to IPR and highlighted the importance of protecting intellectual property in the digital age. Overall, the talk was an excellent initiative to raise awareness of IPR among individuals and organizations.

Topic: One-week International conference (ICMCESA-22)

Date: February 22-28, 2022

Number of Participants: 374

Resource Person: Dr Himender Bharti (8591645454). Prof.Gaytha A Lagolis (langlois@bryant.edu), Dr Charu Dogra Rawat (9818616058), Prof Ram Kumar (9811766991), Dr Anjan Prusty (8780978137), Dr Rachna Chandra (94282486226), Dr Bettina Sonntag (bettina.sonntag@uibk.ac.at) , Prof.Rup Lal (9810785766), Prof. Andy Purvis (Andy.Purvis@nhm.ac.uk), Dr Mrityunjay Kar Suar , Dr Binita Dutta and Dr Gayatri Kanungo

Report:

The College under the aegis of DBT Star College Scheme and IQAC organized an Interdisciplinary One-week long International conference (ICMCESA-22) where students got chance to interact with several national and international eminent speakers, Faculty from across the globe delivered invited, Keynote and Plenary talks conducted by Department of Zoology during the Conference were:

(1) Dr Himender Bharti Delivered a talk on **Anthropocene: A misplaced trust in Ecological Utopia**

(2) Prof.Gaytha A Lagolis delivered a talk on **Syzygy or Sisyphus: The Future of Environmental Policy Making**

(3) Dr Charu Dogra Rawat delivered a talk on **Overcoming challenges in the sustainable remediation of Hexachlorocyclohexane (HCH) dumpsite soils**

(4) Prof Ram Kumar delivered a talk on **Zero Hunger and climate mitigation: Constraints and possibilities**

(5) Dr Anjan Prusty delivered a talk on **Criteria for Identifying Coastal & Marine Eco Sensitive Areas: A Revisit.**

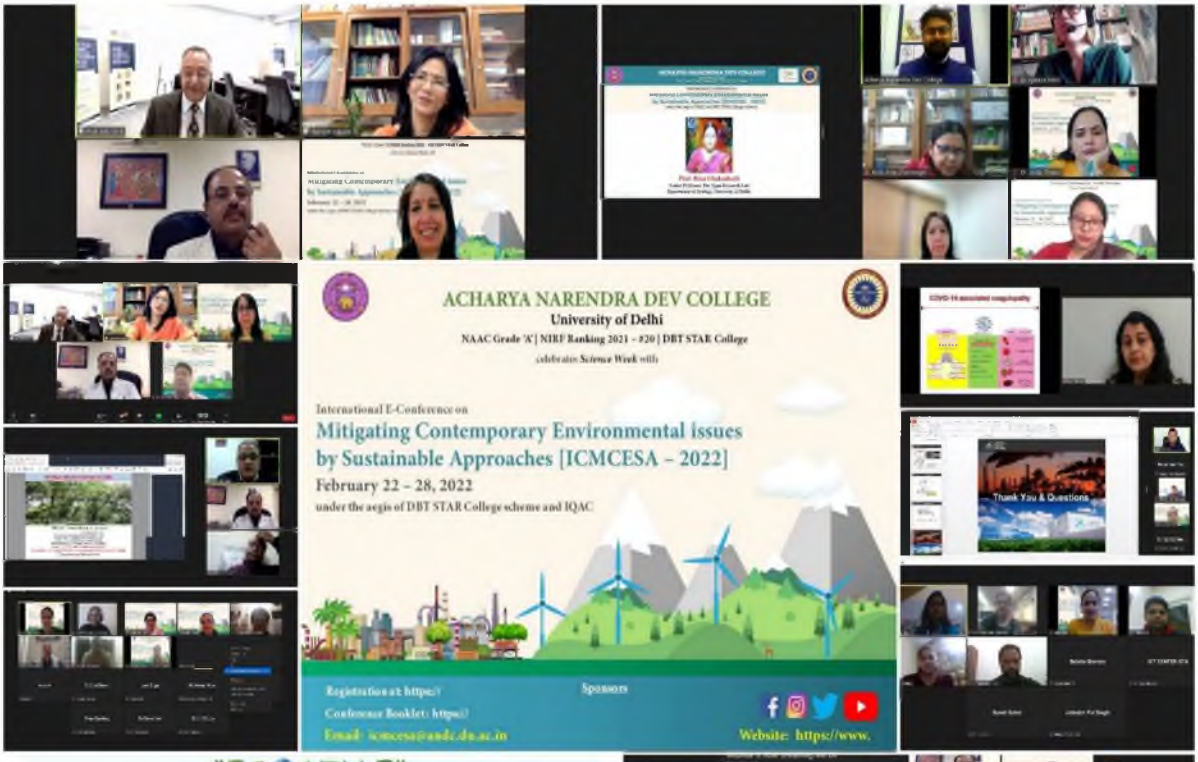
(6) Dr Rachna Chandra delivered a talk on **Mangrove plantation activities in Kachchh, Gujarat**

(7) Dr Bettina Sonntag delivered a talk on **Identification and monitoring of ciliated key protists in aquatic environments in the light of a sustainable environmental approach**

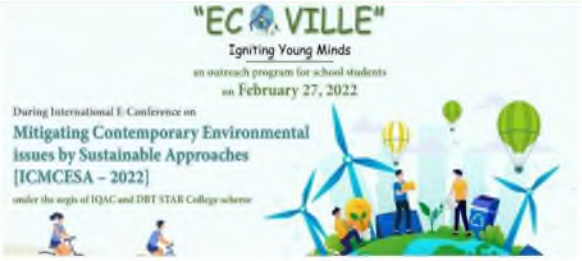
(8) Prof.Rup Lal delivered a talk on Hot springs located Atop the Himalayan Ranges at Manikaran and KheerGanga in Himachal Pradesh, India : Potential Sources of Microbial Diversity and Thermostable Enzymes

(9) Prof. Andy Purvis delivered a talk on Using biodiversity models to support the nature-positive transition

(10) Dr Mrityunjay Kar Suar delivered a talk on Incubating Ideas to Build Sustainable Environmental Technologies.



(11) Dr Binita Dutta delivered a talk on Health care sustainability



(12) Dr Gayatri Kanungo delivered a talk on Nourish Ecosystems, Nurture Biodiversity, Enable Food and Enhance Resilience – Integrating Nature's potential

Conferences/Workshops/Seminars for the year 2020-21

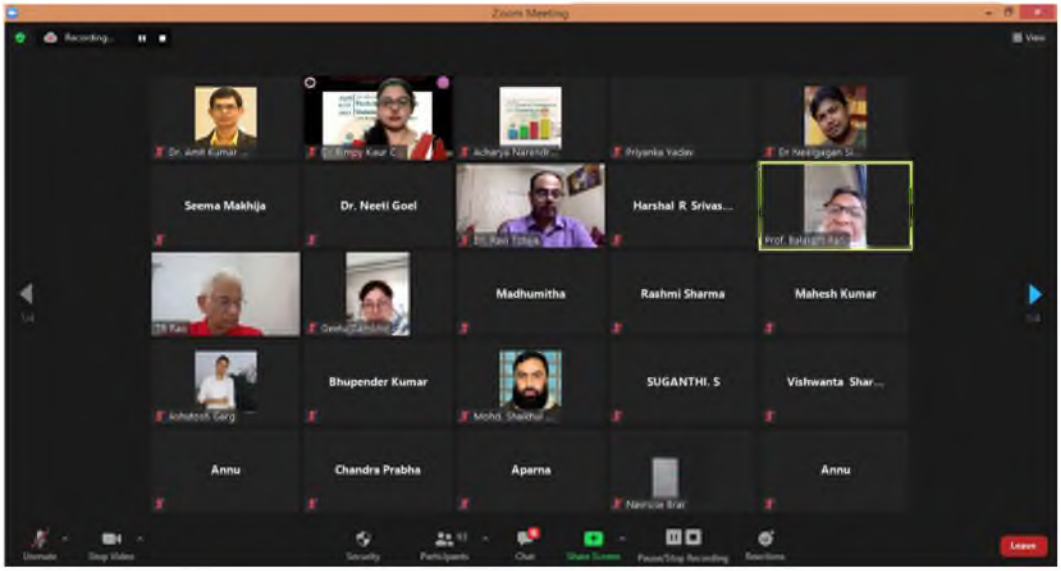
Title: Tools and Techniques in Statistical Analysis

Organizing team: Dr Archna Pandey Dr Rimpy Kaur Chowhan Dr Ritu Khosla (Department of Biomedical Science) Dr Rashmi Sharma Dr Manoj Kumar Singh Dr Sumit Sahni Dr Vineet Kumar Singh (Department of Botany) Dr Vatsla Kohli Dr K. R. Meena Dr Neeti Goel Dr Gurudutt Rao Ambedkar Dr Narain Singh (Department of Mathematics) Prof. Seema Makhija Dr Neelgagan Singh, Dr Rahul Dev (Department of Zoology)
Date: April 06-19, 2021

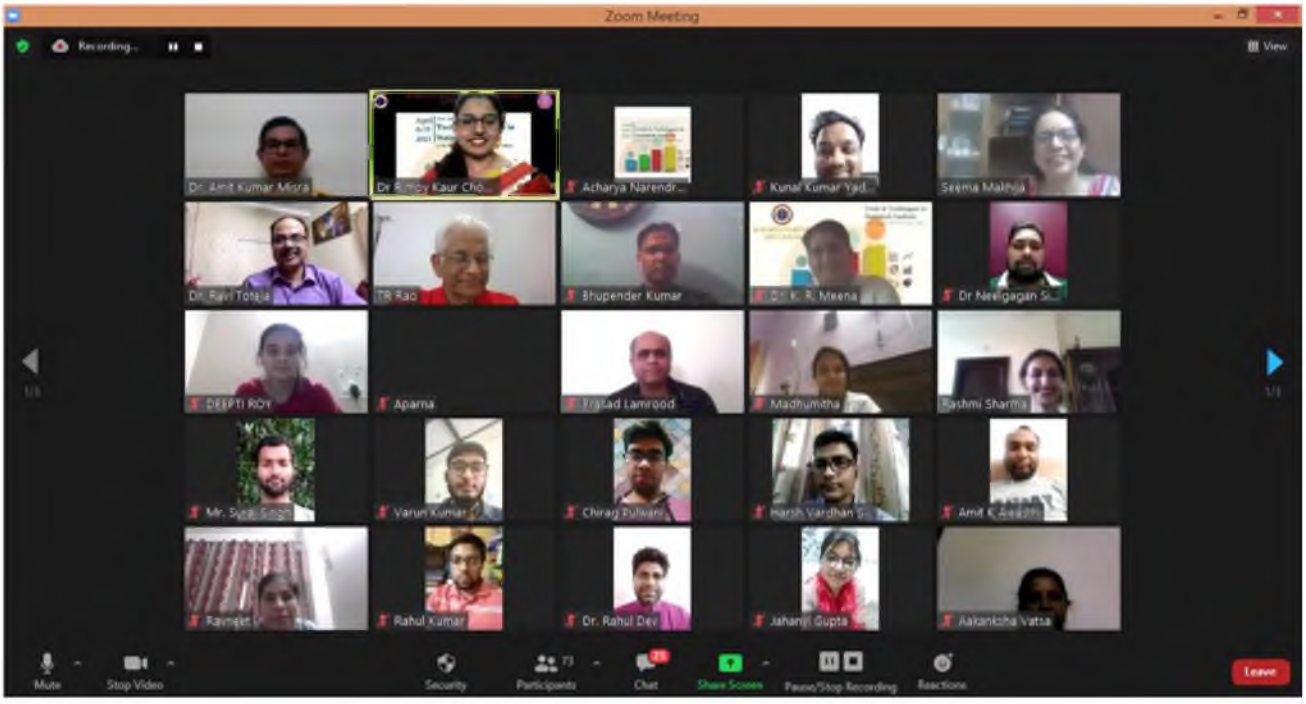
No. Of Participants: 210

Resource Persons: Prof T.R. Rao (9810129396), Professor Aditi Gangopadhaya (8126767145), Dr Mohd. Arshad (9336340459), Dr Amit Kumar Misra (9839425105), Dr Akanksha Gupta, Dr Qazi Azhad Jamal (7417962055), Dr Shashi Bhushan (8004466444), , Dr.Shakuntala Misra and Dr K R Meena (9897727093)

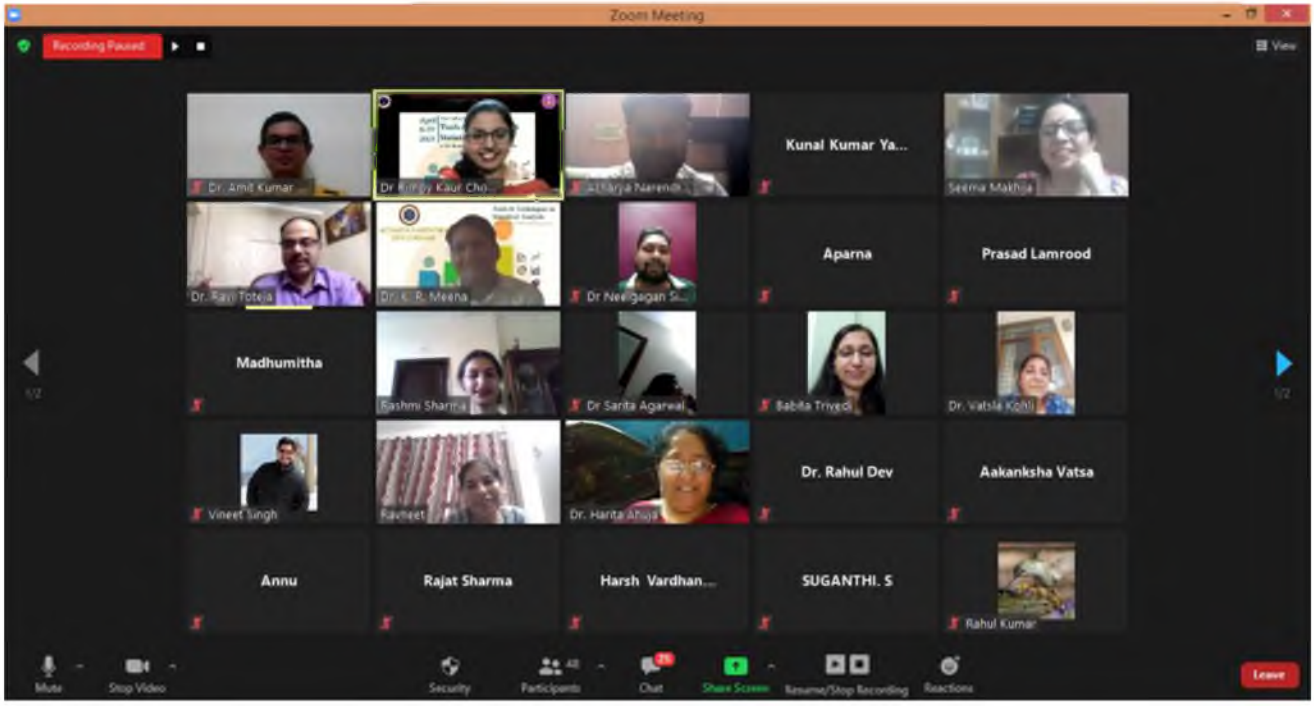
Report:



Department of Biomedical Science, Botany, Mathematics and Zoology of Acharya Narendra Dev College (ANDC), University of Delhi under the patronage of Prof. Ravi Toteja (Officiating Principal, ANDC) organized the two-week national workshop (online)on "Tools and Techniques in Statistical Analysis" under the aegis of DBT-STAR College Scheme on 6-9thApril 2021 on Zoom from 4-6 pm every day. Prof Balaram Pani, Dean of Colleges, University of Delhi was the chief guest and Prof S M Anwar Alam, Chairman governing body, ANDC was the chief patron of the workshop. The organizing team comprised of the convenors - Dr.Vatsla Kohli (Department of Mathematics), Dr. Seema Makhija (Department of Zoology), and Dr. K. R. Meena (Department of Mathematics); co-convenors – Dr.Archana Pandey (Department of Biomedical Science) and Dr. Rashmi Sharma (Department of Botany); organizing secretaries – Dr Sumit Sahni and Dr Vineet Kumar Singh; and technical team – Dr Manoj Kumar Singh, Dr Neelgagan Singh, Dr Rahul Dev, Dr Rimpy Kaur Chowhan, Dr Ritu Khosla, Dr NeetiGoel, Dr Gurudutt Rao Ambedkar, Dr Narain Singh, Dr Deo Dutt Arya, Mr Tarun Sharma, and Mr Sanjay Sangwan.



Statistics or state arithmetic, as called in the roman era, is not a new field, in fact it dates back to as early as 1st century B.C with roots in real life applications. In the current scenario, the statistical methods are used extensively in mathematics, biology, medicine, physics, chemistry, engineering, environmental science, sociology and several other interdisciplinary fields. Thus, making the knowledge of various tools and techniques in statistical analysis and how to effectively use them for research and decision making as an imperative tool for any scientific endeavour. To upkeep these goals, with the kind counsel of our advisory team comprised of Dr Garima Gupta, Scientist E, Department of Biotechnology; Prof C S Lalitha, Head and Dean, Faculty of Mathematical Sciences, University of Delhi; Professor Umesh Rai, Head, Department of Zoology, University of Delhi; Professor S B Babbar, Head, Department of Botany, University of Delhi; Professor Shobha Bagai, Cluster Innovation Centre, University of Delhi; Dr.Anjan, Associate Professor and Head, Department of Natural Resource Management and Geoinformatics, Khallikote University; Prof. Daman Saluja, Director, Dr. B R Ambedkar Centre for Biomedical Research(ACBR), University of Delhi; Dr. Abdullah A Ansari, Assistant Professor, International Centre for Advanced Interdisciplinary Research; Dr.Kamlesh Jangid, Assistant Professor, Department of Mathematics, Rajasthan Technical University; and Dr. Manish Khandelwal, Assistant Professor, Department of Mathematics, Indira Gandhi National Tribal University (IGNTU), Amarkantak, this workshop has been meticulously designed to provide knowledge on statistical modelling, data mining, and fitting statistical models to data in real-world applications using various statistical analysis tools like R and SPSS.



The information about the webinar was disseminated on various official social medial channels of the college including instagram, facebook, twitter and college website with few selective sessions of the workshop to be released on college'syoutube channel as well. Approximately, 205 participants including undergraduate and postgraduate students, research scholars and academicians from all over the country, registered for the event after paying the registration fee of Rs. 100 for ANDC Students (UG and PG), Rs. 200 for other Students (UG and PG), Rs 500 for Research Scholars, and Rs 1000 for Industry Sponsored individuals.

During this 15 day long workshop, two sessions were being conducted almost every day by the eminent speakers - Professor T R Rao, IISER, Berhampur; Professor Ram Kumar, Central University of South Bihar; Professor Aditi Gangopadhaya, Department of Mathematics, IIT-Roorkee; Dr Mohd. Arshad, Assistant Professor, Department of Mathematics, IIT-Indore; Dr Amit Kumar Misra, Assistant Professor, Department of Statistics, Babasaheb Bhim Rao Ambedkar University, Lucknow; Dr Akanksha Gupta, Assistant Professor, Department of Statistics, Institute of Science, Bangalore; Dr QaziAzhad Jamal, Assistant Professor, Department of Mathematics and Statistics, Banasthali Vidyapith, Rajasthan; Dr Shashi Bhushan, Associate Professor and Head, Department of Mathematics &Statistics, Dr.Shakuntala Misra National Rehabilitation University, Lucknow; and Dr K R Meena, Assistant Professor, Department of Biomedical Science, Acharya Narendra Dev College. They gave lectures on the broad themes of Fundamentals of Statistics (special reference to biology), Data types and collection, Sampling techniques, Measures of central tendency and Measures of dispersion, Correlation and Regression Analysis, Statistical inference, Estimation procedures, hypothesis testing (Student's 't' test, chi square test, F test), Introduction to Binomial, Poisson and Normal distribution, and uses of advance software's (R, SPSS and Sigma plot) in modern biostatistics. The end of every session was followed by a Q & A session, where all the attendees actively participated and all of their doubts and queries were answered.

The workshop ended with a lively valedictory session with speeches by Prof Ravi Toteja, Prof BalaramPani, Prof T R Rao, Dr Amit Kumar Misra, several participants and a formal vote of thanks by Dr Rashmi Sharma. Overall, it was definitely a successful workshop, evident by the hordes of positive feedbacks and quiz turnouts submitted every day.

Workshop Schedule

April 6	3:30 pm-3:45 pm Welcome Address Dr Ravi Toteja Officiatng Principal	3:45 pm-4:00 pm Inaugural Address Professor Balaram Pani, Chief Guest Professor Anwar Alam, Chief Patron	4:00 pm-5:00 pm Biostatistics: General Perspective Professor T.R. Rao	5:00 pm-6:00 pm Basics of Statistics, Measurements Dr Amit Kumar Misra
April 7	4:00 pm-5:00 pm Probability Theory in Information Security Dr Aditi Gangopadhyay	5:00 pm-6:00 pm Basics of Statistics, Measurements Dr Amit Kumar Misra		
April 8	4:00 pm-5:00 pm Normal Distribution Professor T.R. Rao	5:00 pm-6:00 pm Collection of data, Classification of data, Sampling methods Dr M. Arshad		
April 9	4:00 pm-6:00 pm Collection and classification of data, Sampling methods. Measure of central Tendency Dr M. Arshad			
April 10	4:00 pm-5:00 pm Measure of Dispersion Dr Akanksha Gupta	5:00 pm-6:00 pm Basics of R-software Dr Qazi Azhad Jamal		
April 11	OFF DAY			
April 12	4:00 pm-5:00 pm Skewness and Kurtosis Dr Akanksha Gupta	5:00 pm-6:00 pm Correlation and regression analysis, similarities and dissimilarities Dr Qazi Azhad Jamal		
April 13	4:00 pm-5:00 pm Correlation and regression analysis, similarities and dissimilarities Dr Qazi Azhad Jamal	5:00 pm-6:00 pm Standard probability distributions, Estimation procedures-I Dr M. Arshad		
April 14	4:00 pm-5:00 pm Standard probability distributions, Estimation procedures-I Dr M. Arshad	5:00 pm-6:00 pm Estimation procedures-II Dr K.R. Meena		
April 15	4:00 pm-5:00 pm Hypothesis Testing Professor T.R. Rao	5:00 pm-6:00 pm Testing of Hypothesis-I Dr Amit Kumar Misra		
April 16	4:00 pm-6:00 pm Testing of Hypothesis-II Dr Amit Kumar Misra			
April 17	4:00 pm-5:00 pm Non-parametric procedures Dr Akanksha Gupta	5:00 pm-6:00 pm Simulation and data analysis using R-software Dr Qazi Azhad Jamal		
April 18	OFF DAY			
April 19	4:00 pm-6:00 pm Sampling techniques Professor Ram Kumar	6:00 pm-7:00 pm Valedictory Session

Title: National Workshop on Advanced Bioinformatics

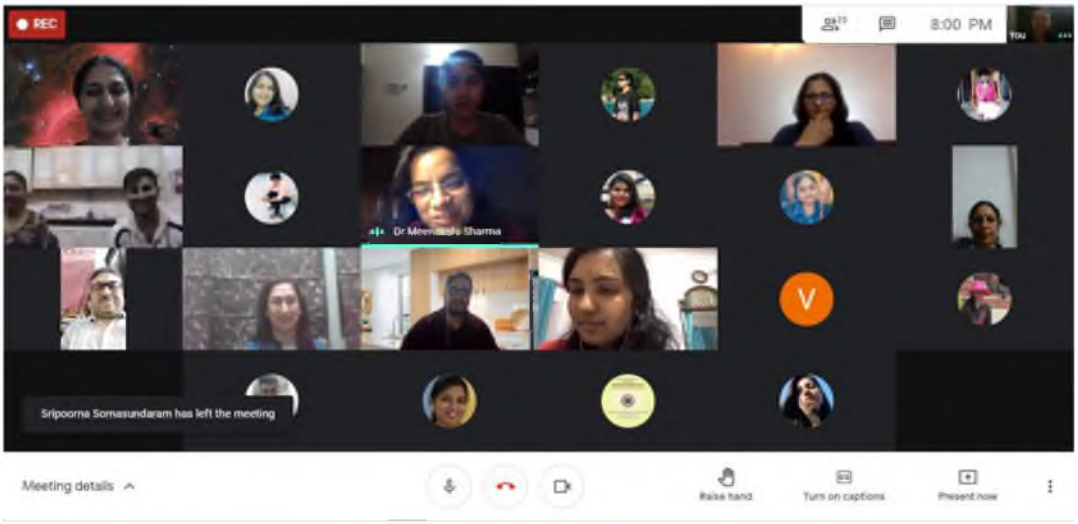
Organizing team: Dr Archna Pandey Dr RimpyKaur Chowhan Dr Ritu Khosla (Department of Biomedical Sciences) Dr Rashmi Sharma (Department of Botany) Prof. Seema Makhija (Department of Zoology)

Date: March 01-03, 2021

Number of Participants:

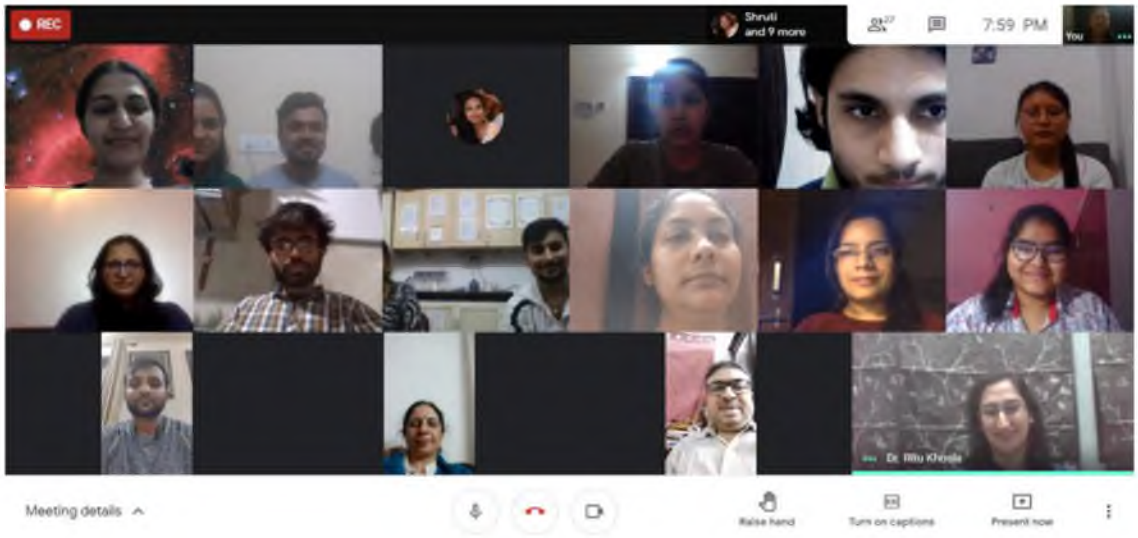
Resource person: Dr. Srinivasan Ramachandran (9818766438)

Report:

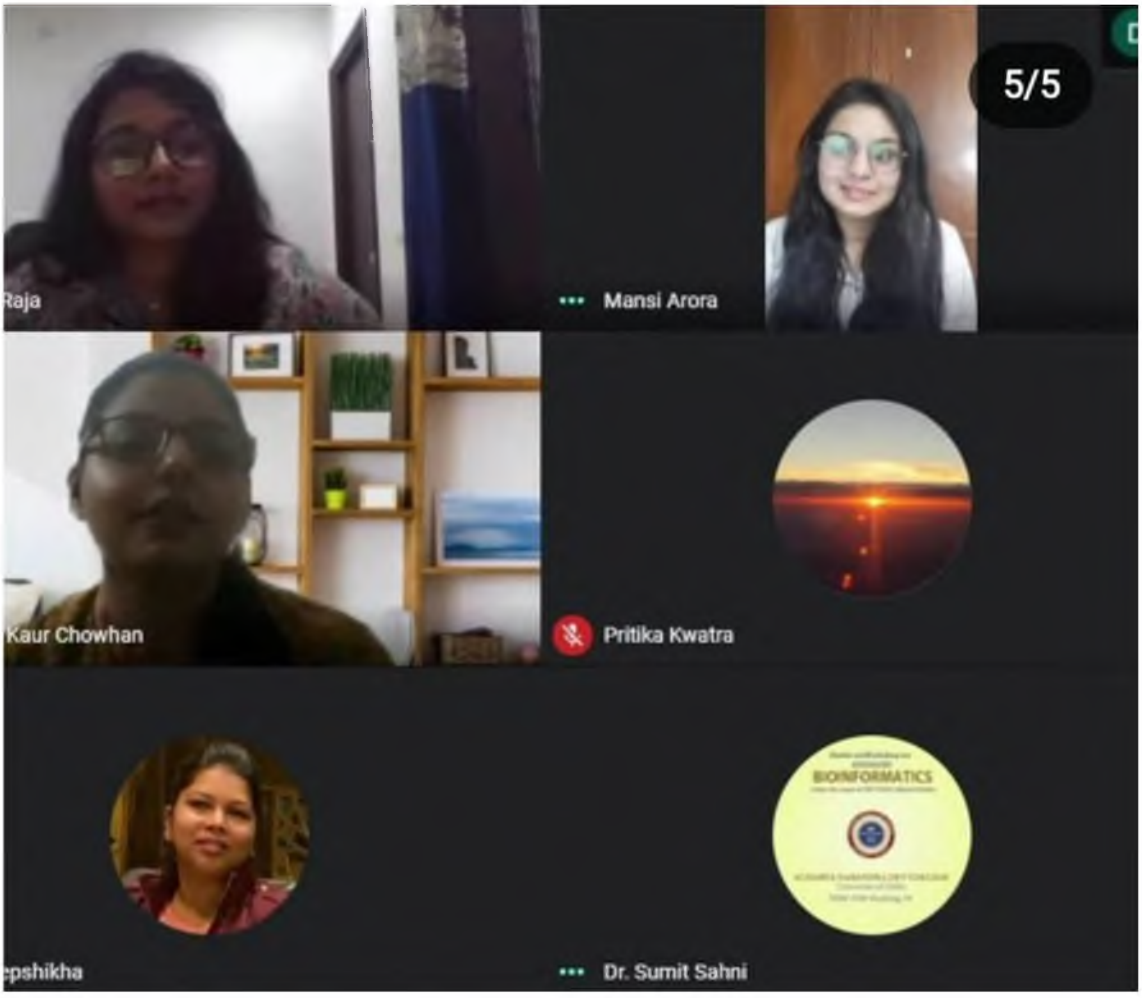


Department of Biomedical Science, Botany and Zoology of Acharya Narendra Dev College, University of Delhi under the patronage of Prof. Ravi Toteja (Officiating Principal, ANDC) organized three days long national workshop on the topic "A step-by step guide to data mining from literature to database" under the aegis of DBT-STAR College Scheme on 1st-3rd March 2021 on google meet. The organizing team comprised of the convenors - DrSeema Makhija (Department of Zoology), Dr Archna Pandey (Department of Biomedical Science) and Dr Rashmi Sharma (Department of Botany).

The resource person for the workshop was Dr. Srinivasan Ramachandran, Senior Principal Scientist, CSIR-Institute of Genomics and Integrative Biology. To ensure maximal interaction between participants and resource person, the maximum participant number was limited to 30 seats. The information about workshop was disseminated on various official social medial channels of the college including instagram, facebook, twitter and the college website, wherein the list of interested participants were sought viaa registration form. All the participants selected on first-cum-first-serve basis were required to pay the nominal fee of Rs. 250 each.The first day talk was also released on the YouTube channel of the college at https://www.youtube.com/watch?v=cvnMiSaGqek.



On the first day participants were given theoretical instructions on the significance and techniques involved in performing data mining from literature to pathways. For the subsequent



two days the participants were divided into small groups of 4-5 participants, where each group was guided in a step-by-step manner to work on any one disease case or a technology case. During this workshop, the participants learned how to extract gene list for different topics from t2doacid.igib.res.in, Enrichment analysis functional interactive network, Pathways recognition and biological interpretation of data using Gene cards and Uniprot.After the hands-on work each group also presented for about 5-8 minutes on their results with discussion.The session was concluded with a vote of thanks by Dr. Rashmi Sharma.

This immensely interactive session bridged the communication gap, we often feel during online workshops, and allowed participants to enhance their applied bioinformatics knowledge. The participants were highly satisfied with their experience and showed willingness to attend many more such workshops in the future.

Acharya Narendra Dev College

University of Delhi

(All India NIRF 2020 Ranking-18, NAAC Score-3.31)

Under the aegis of DBT-STAR College Scheme

Hands-on Workshop on ADVANCED BIOINFORMATICS

Date: March 1-3, 2021

Schedule

Time	Day 1 (March 1, 2021)
5 P.M. to 6 P.M.	Talk on "A Step-by-Step Guide of Data Mining from Literature to Pathways.
Time	Day 2 and 3 (March 2-3, 2021)
5 P.M. to 7 P.M.	Hands-on Workshop on: • Extracting gene list using pubmed.mineR • Gene enrichment analysis • Functional interactive network • Biological interpretation using Gene cards and Uniprot

Instructions

- ❑ All participants must have their own computer/laptop
- ❑ Install R, R studio, pubmed.mineR in the sequence in your laptop
- ❑ For R: https://cran.cnr.berkeley.edu/ https://cran.r-project.org/
- ❑ For R studio: https://rstudio.com/products/rstudio/download/
- ❑ For pubmed.mineR
  - install pubmed.mineR package from R or Rstudio console using the following command:
  - install.packages("pubmed.mineR")# install from RStudio console

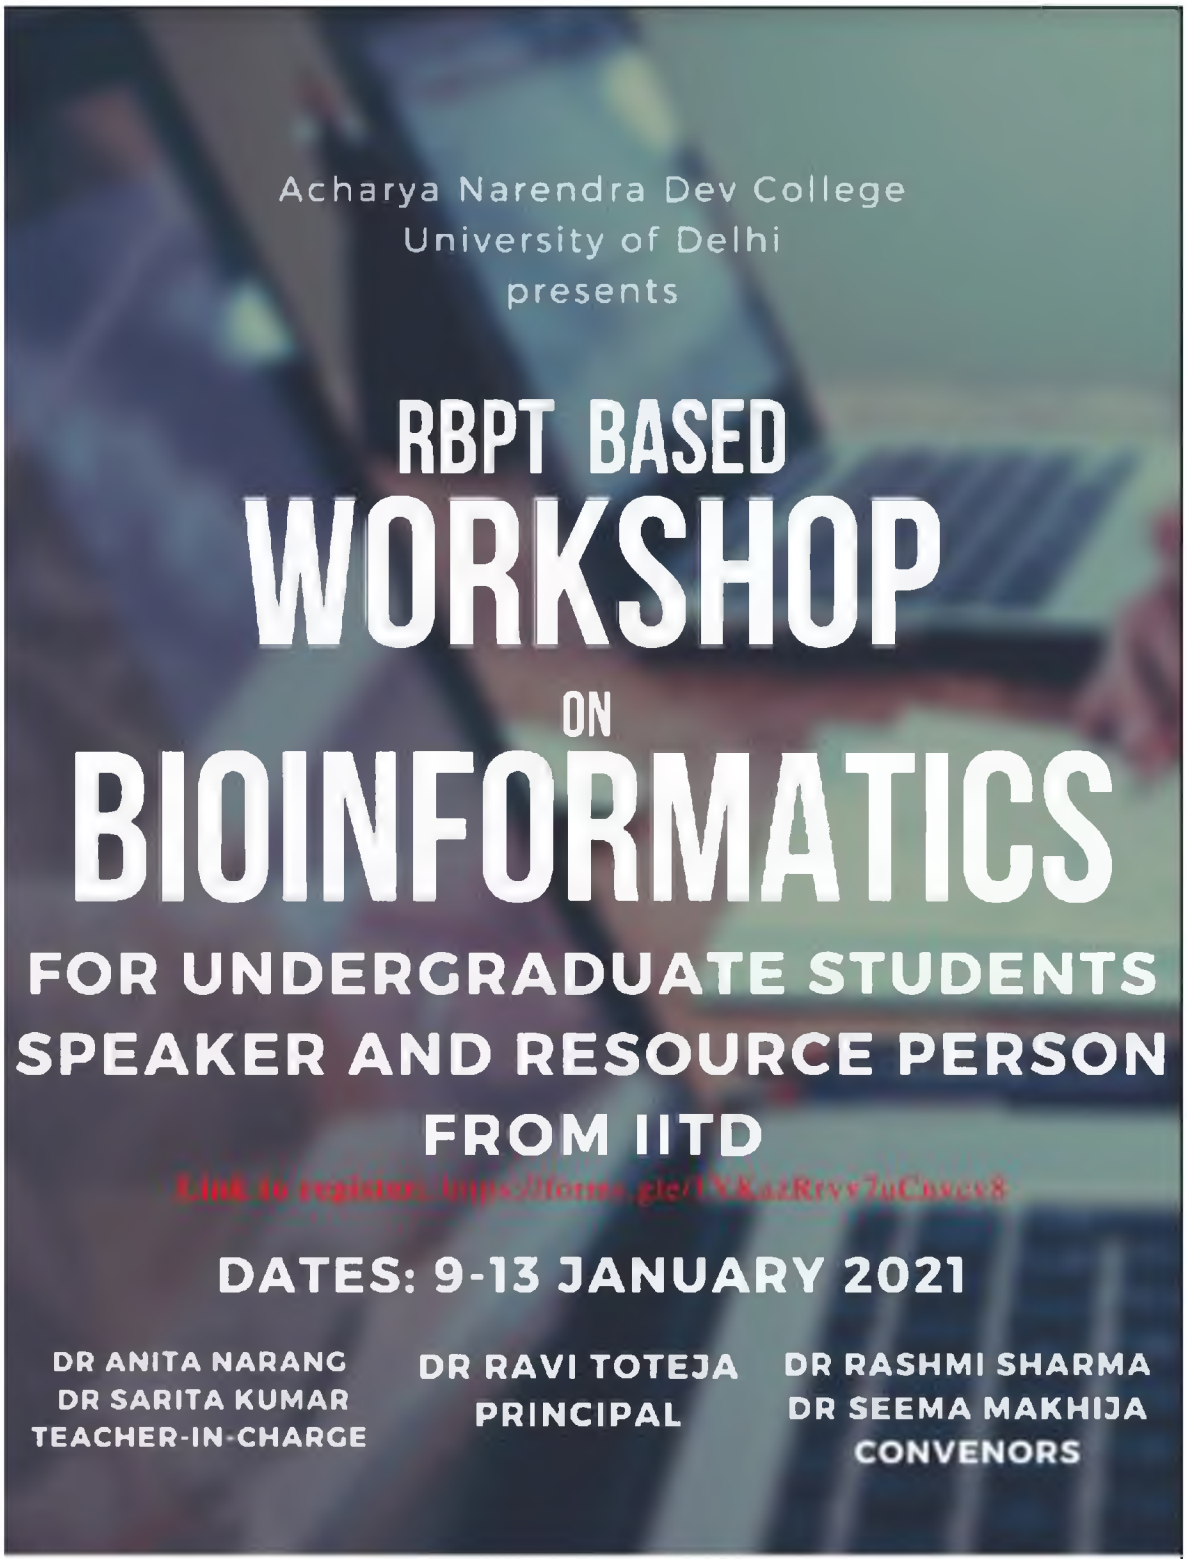
Title:

Bioinformatics for Undergraduate Students

Organizing team: Prof. Urmi Bajpai Dr Archna Pandey (Department of Biomedical Science) Dr Rashmi Sharma Dr Anita Narang (Department of Botany) Prof. SeemaMakhija Dr Monica Misra (Department of Zoology)

Date: January 09-13, 2021



Number of Participants: 86

Resource Persons: Prof Jai Ram (bjayaram@chemistry.iitd.ac.in) and Dr Akhilesh Misra

Report:

Workshop on "Bioinformatics for Undergraduate students" Department of Biomedical Science, Botany and Zoology organised five days long National workshop on 'RBPT based workshop on Bioinformatics' from January 09-13, 2021 on Google meet. The resource persons for the workshop were Prof Jai Ram, Professor, IIIT Delhi and Dr Akhilesh Misra, Research Associate, IIT Delhi. Online workshop for students for understanding databases and learning tools like BLAST, CLUSTAL and knowing how to predict gene in the genome. The topics covered during the workshop were:

1. Introduction to bioinformatics: This included a brief overview of the field and its applications in biology, such as genomics, proteomics, and metabolomics.
2. Data analysis: Bioinformatics is heavily focused on data analysis, so our resource persons have discussed some of the tools and techniques used to analyze biological data, such as sequence alignment, clustering, and machine learning.
3. Databases: Another important aspect of bioinformatics is the use of databases to store and manage biological data. Students were introduced to popular databases in bioinformatics, such as GenBank, UniProt, and the Protein Data Bank.
4. Applications of bioinformatics: There are many applications of bioinformatics in biology, medicine, and biotechnology. Prof. Jai Ram and Dr Akhilesh discussed some of these applications, such as drug discovery, personalized medicine, and synthetic biology.
5. Future directions of bioinformatics were discussed, such as the integration of multiple types of biological data, the development of new tools and techniques for data analysis, and the use of artificial intelligence and machine learning to make sense of biological data.

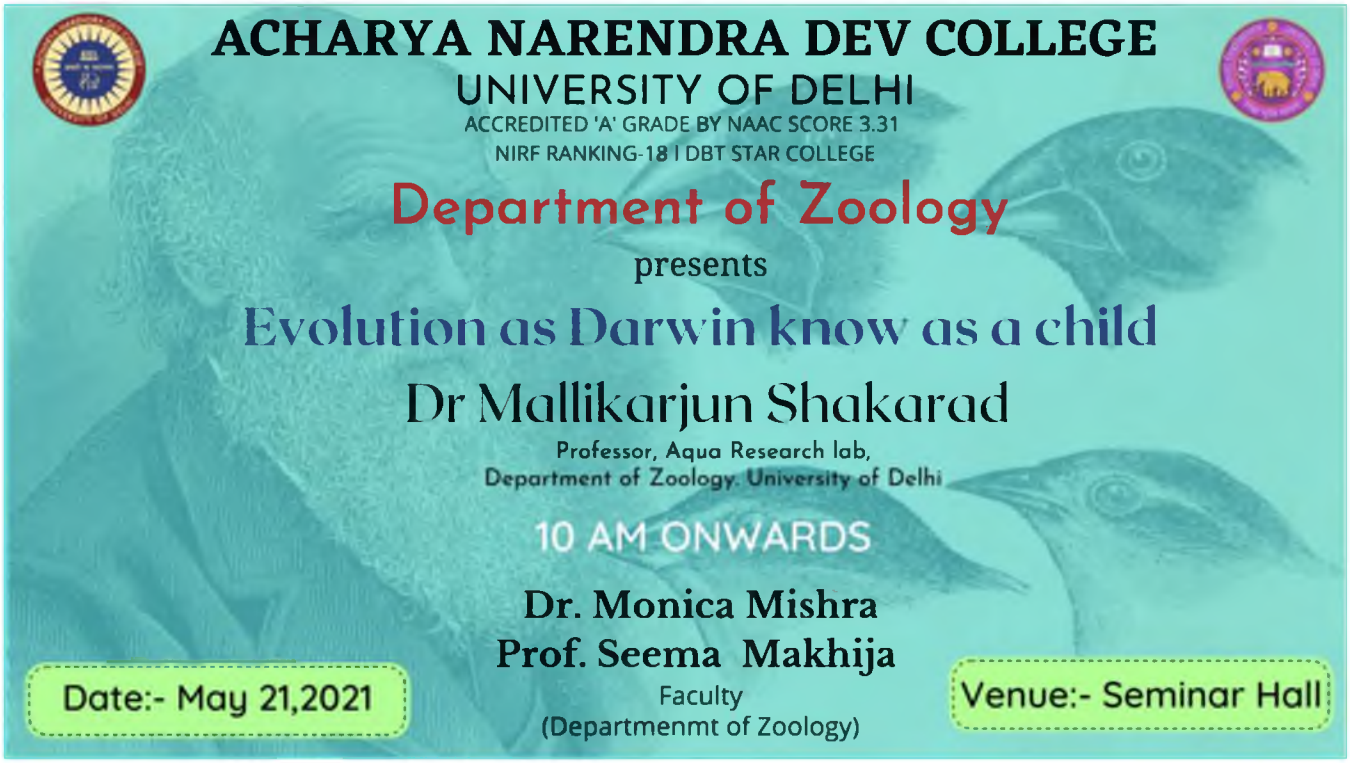
Title: Evolution as Darwin knew as a child

Organizing team: Dr Sarita Kumar Dr Monica Misra Dr Seema Makhija Mr Ravinder K. Sagar Dr Aparna Sharma Dr Sweety Shrimali Dr Rahul Dev Dr Neelgagan Singh Mr Sanjay Kumar Mr Vineet Girdharwal Dr Shrankhla (Department of Zoology)



Date: May 22, 2021

Number of Participants:

Resource Person: Prof Mallikarjun Shakarad (8376999076)

Report:

Prof Mallikarjun Shakarad who is a Professor in Aqua Research lab, Department of Zoology. University of Delhi enlighted us on the interesting topic Evolution as Darwin knew as a child. He began his talk with an introduction to Charles Darwin who was a British naturalist. Darwin's theory of evolution was met with controversy and skepticism in his time, as it challenged the prevailing belief in a fixed and unchanging natural order. However, his work has had a profound impact on our understanding of biology and the natural world, and his ideas continue to be a subject of study and debate to this day. Interesting lecture ended with a vote of thanks to the speaker.

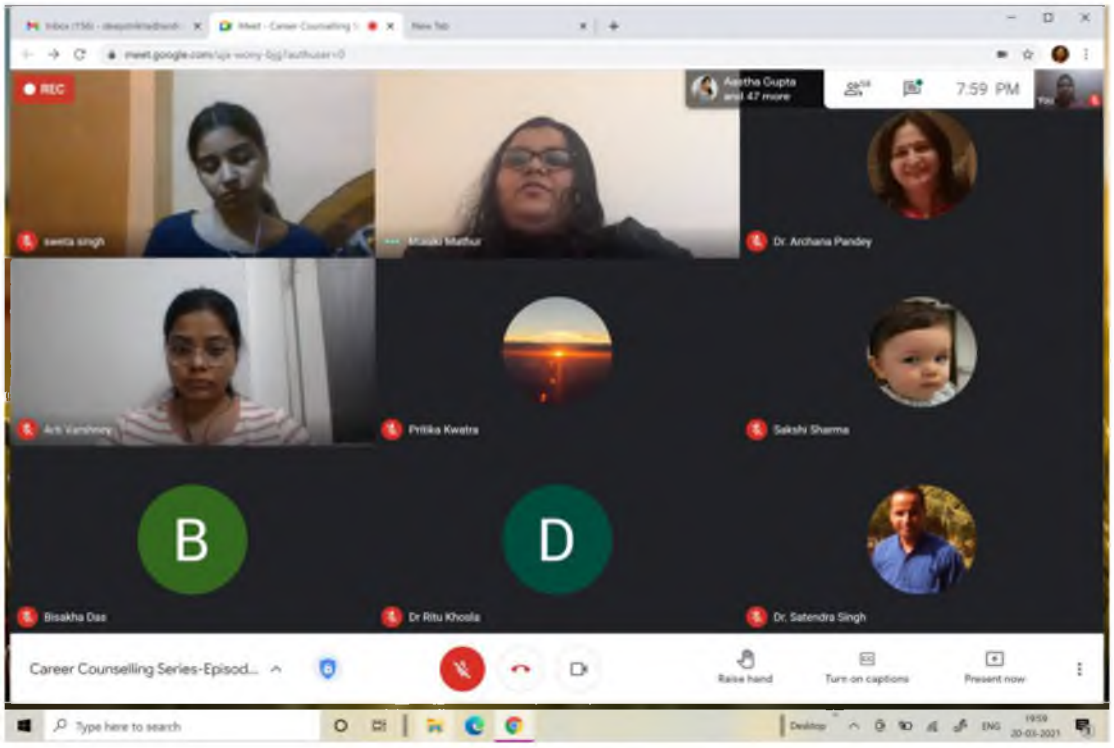
Title: Career in Indian Forest Service: A session with IFS officers

Organizing committee: Dr ArchnaPandey Dr Satendra Singh Dr Rimpy Kaur Chowhan DrRituKhosla Dr Deepshikha (Department of Biomedical Sciences) DrRashmi Sharma DrManoj Kumar Singh DrSumitSahni DrVineet Kumar Singh (Department of Botany) Prof. SeemaMakhija DrNeelgagan Singh Dr Rahul Dev Mr Sanjay Kumar (Department of Zoology)



Date: April 18, 2021

Number of Participants: 67

Resource Persons: Prof. Sandeep Tambe (9474059791), Banumathi G ( ) and Jrishna Devan ( )

Career in Indian Forest Service: A session with IFS officers': Department of Biomedical Science, Botany, Mathematics and Zoology of Acharya Narendra Dev College (ANDC), University of Delhi under the patronage of Prof. Ravi Toteja (Officiating Principal, ANDC) organized the the fourth webinar of the ANDC career counselling series entitled "Career in Indian Forest Service: A session with IFS officers " on 18thApril 2021 on Google meet from 7-9 pm. The distinguished guests invited for the talk were IFS officers, Prof. Sandeep Tambe from IIFM, Bhopal; S. Elamurugannan, Deputy Director, Forest Survey of India, South Zone and Banupathi G., Deputy secretary, DBT India and ANDC alumni at IFS, Karthikeyani (2018 Batch) and Jrishna Devan (2018 Batch). All of them introduced the current students to the enticing and challenging field of Forest services and make them explore the plethora of career opportunities available in the field.

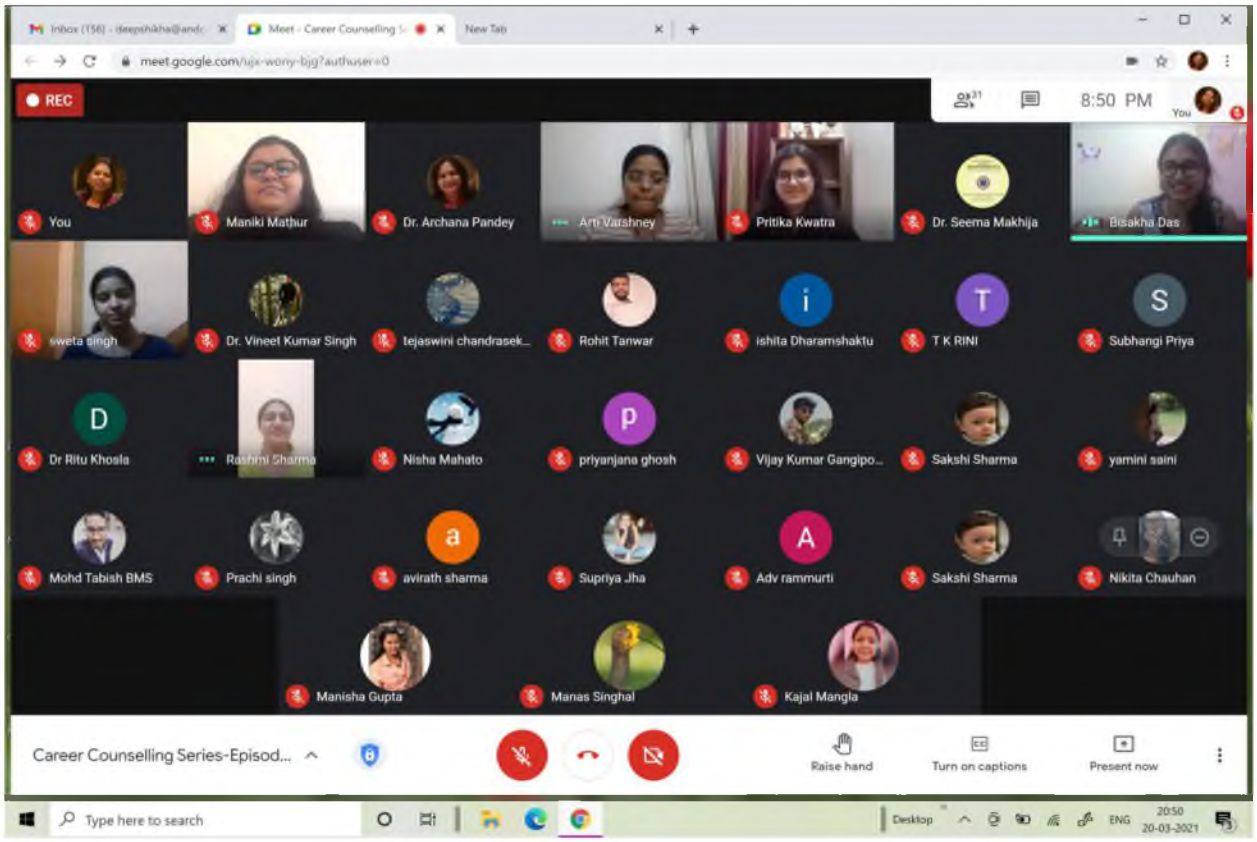
Title: Career counselling series: Career in Forensic Science: An Interaction with Seniors

Organizing team: Dr Archna Pandey Dr Satendra Singh Dr Rimpy Kaur Chowhan Dr Ritu Khosla Dr Deepshikha (Department of Biomedical Sciences) Dr Rashmi Sharma Dr Manoj Kumar Singh,

Dr SumitSahni Dr Vineet Kumar Singh (Department of Botany) Prof. SeemaMakhija Dr Neelgagan Singh Dr Rahul Dev Mr Sanjay Kumar (Department of Zoology)

Date: March 20, 2021

Number of Participants: 49



Resource Persons: Ms. Sweta(965442186), Ms. Maniki Mathur, Ms. Arti Varshney

Report:

Under the Aegis of DBT-STAR College Scheme, the third webinar of the ANDC career counselling series entitled "Career in Forensic Science" was successfully organized by the Department of Biomedical Science, Department of Botany and Department of Zoology of Acharya Narendra Dev College (ANDC). The event was held on google meet on 20th March 2021 (https://meet.google.com/ujx-wony-big, IST 19:30 to 21:00 hours). The underlying theme was to introduce the current students to the enticing and challenging field of forensic science and make them explore the plethora of career opportunities available in the field.

The first speaker for the day, Ms. Sweta shared a glimpse of her journey from a bachelor's in biomedical science from ANDC to pursuing a master's in forensic science with specialization in Forensic Chemistry and Toxicology from LNJN National Institute of Criminology and Forensic Science, MHA, Govt. of India. She explained the prerequisites for entrance process for NICF, covering the syllabus in detail and introduced the participants to different specialization fields and the most sought-after career options for forensic science. The second talk was by Ms. Maniki Mathur, an alumnus of Daulat Ram College, University of Delhi. She completed her M.Sc. in Forensic Molecular Biology from George Washington University, USA and is currently working as DNA technologist at Bode Technology Group Inc., USA. She explained the application process for foreign universities, citing her experience as an example. She also focused on the importance of internships while exploring job opportunities in the field and shared the details of her work profile to help the students understand what it means to be a forensic scientist. The final speaker, Ms. Arti Varshney went on for a master's in forensic science from Sam Higginbottom University of Agriculture, Technology and Sciences, India after completing a PG Diploma in Forensic Science from SGTB Khalsa College, University of Delhi. She got employed at Sherlock Institute of Forensic

Science, India through a training-cum-placement program and is currently working as a content developer and educational trainer. She told about the various professional fields available at SIFS and emphasized on the hard work the field demands.

Career counselling series: Studying in Europe: Interaction with seniors:

Organizing team: Dr ArchnaPandey Dr Satendra Singh Dr Rimpy Kaur Chowhan Dr RituKhosla DrDeepshikha (Department of Biomedical Sciences) Dr Rashmi Sharma Dr Manoj Kumar Singh, Dr Sumit Sahni, Dr Vineet Kumar Singh (Department of Botany) Prof. Seema Makhija, Dr Neelgagan Singh, Dr Rahul Dev, Mr Sanjay Kumar (Department of Zoology)

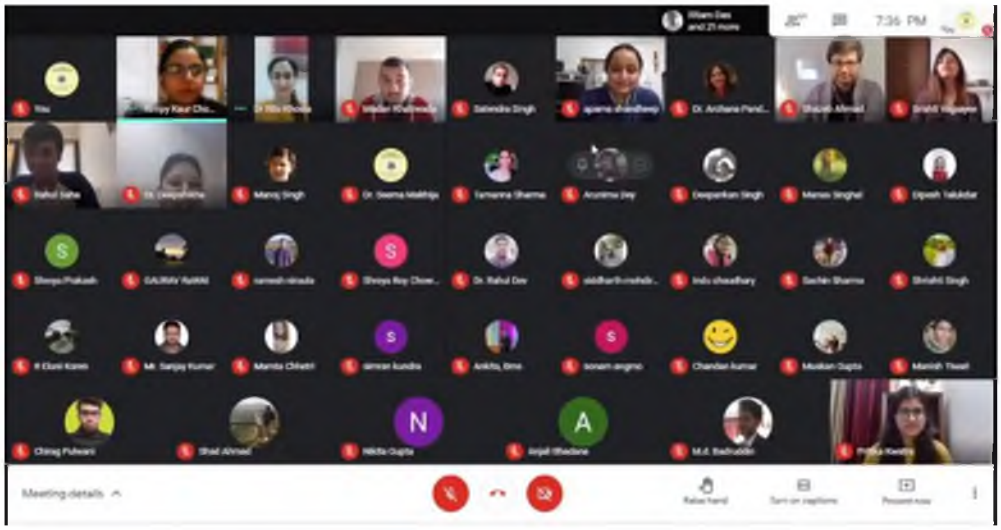
Date: March 14, 2021

Number of Participants: 97

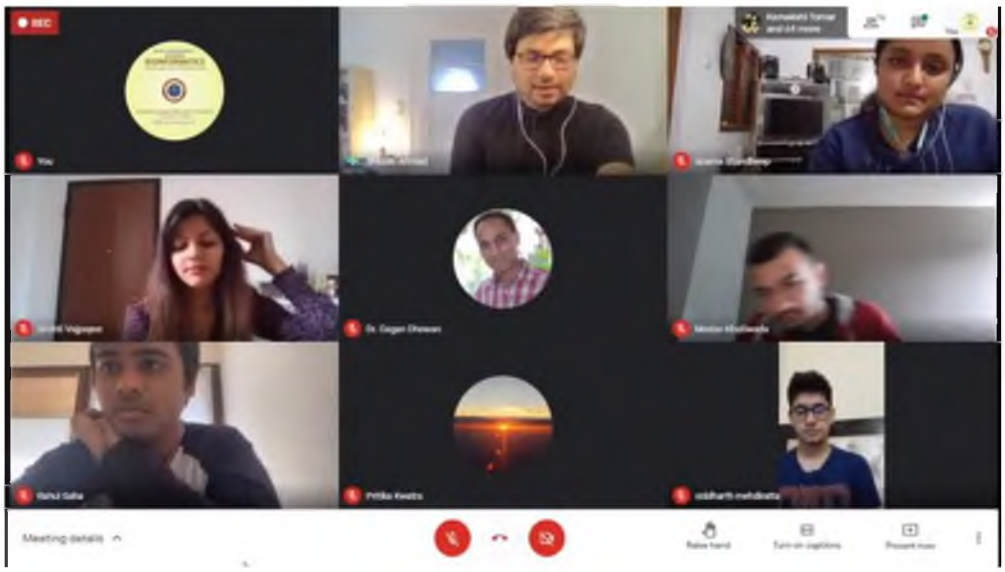
Resource Persons: Ms. Aparna Shandheep(8447783757), Ms. Srishti Vajpayee (+393284464970), Mr. Rahul Saha (9818274651), Mr.Madan Khatiwada(956052637)

Report:

Department of Biomedical Science, Botany and Zoology of Acharya Narendra Dev College, University of Delhi under the patronage of Prof. Ravi Toteja (Officiating Principal, ANDC) organized the second session of ANDC career counselling series titled "Studying in Europe - Interaction with Seniors" under the aegis of DBT-STAR College Scheme on 14thMarch 2021 on google meet. The organizing team comprised of the convenors - Dr. Archana Pandey (Department of Biomedical Science), Dr. Rashmi Sharma (Department of Botany) and Dr. Seema Makhija (Department of Zoology); organizing committee - Dr. Satendra Singh, Dr. Rimpy Kaur Chowhan, Dr. Ritu Khosla, Dr. Deepshikha, Dr. Manoj Kumar Singh, Dr. Sumit Sahni, Dr. Vineet Kumar Singh, Dr. Neelgagan Singh, Dr. Rahul Dev and Mr. Sanjay Kumar; and student coordinator, Sudeepta Singh.



The information about the webinar was disseminated on various official social medial channels of the college including instagram, facebook, twitter and college website, and the webinar was released on the YouTube channel of the college at https://www.youtube.com/watch?v=CNEPf7bHqmQ. The session intended to provide an insight to the opportunities available to the students to study post-graduate courses abroad, particularly in Europe through a group of five panellists- Ms. Aparna Shandheep, Ms. Srishti Vajpayee, Mr. Rahul Saha, Mr. Shazeb Ahmad and Mr. Madan Khatiwada. All the panellist are college alumni who



went to pursue higher studies in the field of science and are currently employed as research scholars or pursuing their PhD.

The first speaker, Ms. Aparna Shandheep did PG Diploma in Forensic Science from University of Delhi, then moved on to pursue Masters in Biomedical sciences- Infectious and tropical diseases in Belgium. Her talk was followed by Ms. Srishti Vajpayee who did her M.Sc. in Biomedical Science with specialisation in molecular life sciences from Radboud University, Netherlands and has presently secured a Ph.D. position at University of Heidelberg, Germany and Cyanagen Srl, Italy under European Union's Marie Skłodowska-Curie fellowship. Next we had, Mr. Rahul Saha who is an Integrated PhD student at International Max Planck research school for Molecular biology, Germany. Mr. Shazeb Ahmad, PhD student at GARV laboratory at Helmholtz Institut for RNA based Infection Research (HIRI) spoke next about his experiences and struggles. The last speaker was Mr. Madan Khatiwada. He did Masters in Leading International Vaccinology Education as Erasmus Mundus program and is currently working as a researcher at University of Antwerp, Belgium on vaccines and Immunization. All panellists shared their journey from the time of their under-graduation in Biomedical Sciences to the present day and discussed the plethora of options available for the students to apply to.

They shared their journey from the time of their under-graduation in Biomedical Sciences from ANDC to their present times and discussed the plethora of options available for the students to apply to.The talk was followed with an extensive Question and Answer session where they explained the process of applying to the colleges abroad, and guided the students on formulating the required documents within a given timeline. They provided with excellent explanations on how studying abroad broadens your horizons in the field of research and development and enhances your personality. The students who thought that applying to study abroad was a daunting and nerve-wrecking process were rather optimistic at the end of the session and gave affirmative and overwhelming feedback and were thankful to the organizers for the event. The session was concluded with a vote of thanks by Dr. Rashmi Sharma. It was truly a wonderful and inspiring session, and filled the students with enthusiasm to keep progressing in the field of science.

Title: Career counselling series (Career after MBA: Exploring the unexplored)

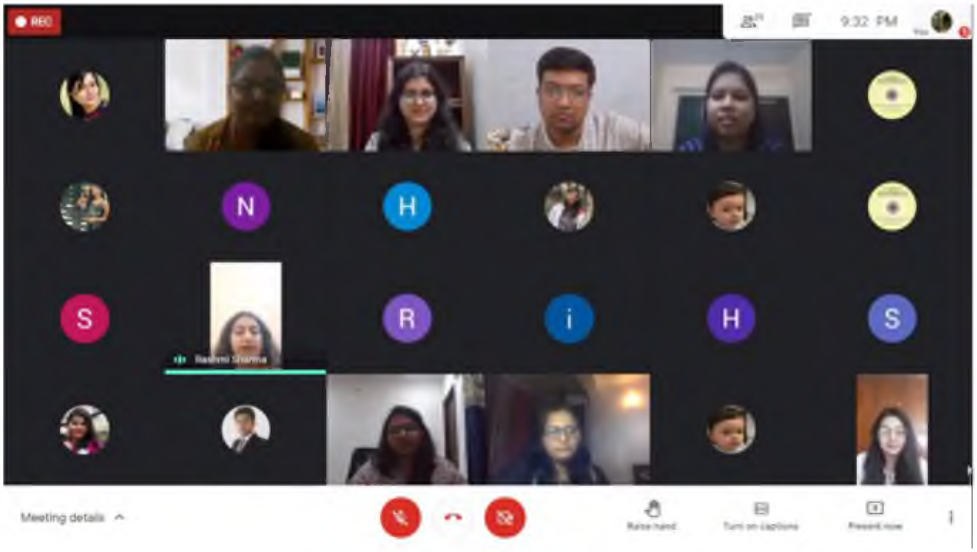
Organizing team: Dr ArchnaPandey Dr Satendra Singh Dr Rimpy Kaur Chowhan Dr RituKhosla Dr Deepshikha (Department of Biomedical Sciences) Dr Rashmi Sharma Dr Manoj Kumar Singh Dr SumitSahni Dr Vineet Kumar Singh (Department of Botany) Prof. SeemaMakhija Dr Neelgagan Singh Dr Rahul Dev Mr Sanjay Kumar (Department of Zoology)

Date: March 07, 2021

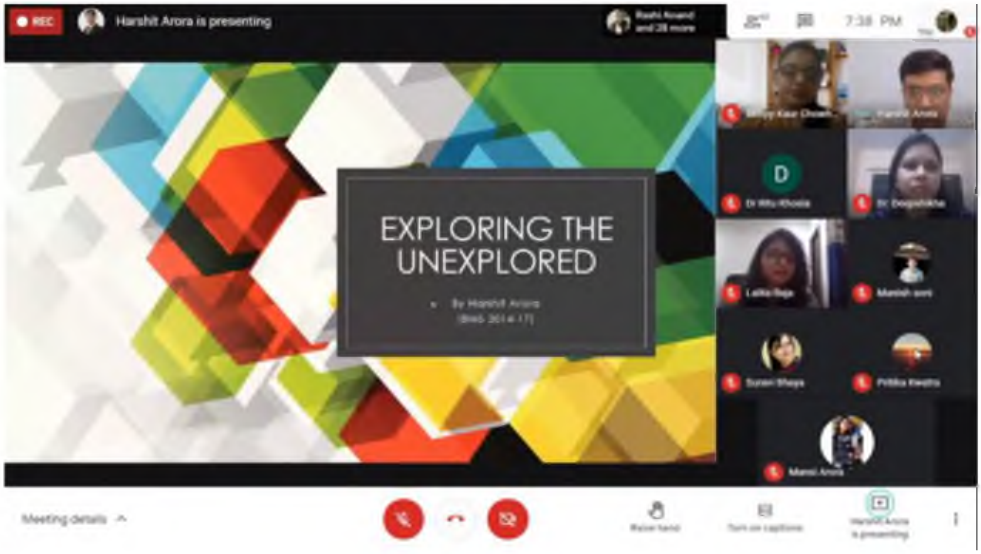
Number of Participants: 90

Resource Persons: Mr. Harshit Arora (7678698594), Ms. Lalita Raja (7838515364), Ms. Mayuri Mathuria (8585947759)

Department of Biomedical Science, Botany and Zoology of Acharya Narendra Dev College, University of Delhi under the patronage of Prof. Ravi Toteja (Officiating Principal, ANDC) organized the first webinar of ANDC career counselling series on topic "Career after MBA – Exploring the Unexplored" under the aegis of DBT-STAR College Scheme on 7thMarch 2021 on google meet. The organizing team comprised of the convenors - Dr. Archana Pandey (Department of Biomedical Science), Dr. Rashmi Sharma (Department of Botany) and Dr. Seema Makhija (Department of Zoology); organizing committee - Dr. Satendra Singh, Dr. Rimpy Kaur Chowhan, Dr. Ritu Khosla, Dr. Deepshikha, Dr. Manoj Kumar Singh, Dr. Sumit Sahni, Dr. Vineet Kumar Singh, Dr. Neelgagan Singh, Dr. Rahul Dev and Mr. Sanjay Kumar; and student coordinator, Mansi Arora.



The three distinguished guests invited for the talk were college alumni who deviated their paths from science to the world of business administration and found huge success. Mr. Harshit Arora did his PGDM (Healthcare management) from GIM, Goa and is currently the Knowledge Management Associate at ZS Associates. Ms. Lalita Raja did her MBA (Hospital and Health management) from IIHMR, Jaipur and is currently the Research associate at Clarivate. Ms. Mayuri Mathuria did her MBA (Hospital and Health management) from IIHMR, Jaipur and is currently the Knowledge Management Associate at ZS Associates. The information about the webinar was disseminated on various official social medial channels of the college including instagram,



facebook, twitter and college website, and the webinar was released on the YouTube channel of the college athttps://www.youtube.com/watch?v=sks8N1wwD4E.

The guest speakers shared their experiences and presented engrossing slides to explain their journey and their own ways of selecting respective career options. For instance, Mr. Harshit shared with undergraduate students his own experience of appearing in exams like CAT, CMAT and NMAT and his selection criteria for applying and choosing among several Colleges like GIM, NMIMS, IIHMR and IMT. He advisedstudents to focus on immediate next steps andto not lose their strength even in darkest hour. Ms. Lalita highlighted how having a bachelor degree in science could be used advantageously after MBA for placements in various healthcare associated companies. Ms. Mayuri on similar notes shared her experiences while shifting from B.Sc. in Biomedical Science to MBA in Healthcare, and suggested everyone to build string network connections and follow their passions instead of conventional routes.The session was concluded with a vote of thanks by Dr. Rashmi Sharma.

Students attending the webinar were highly encouraged by the talk which was evident by the lively discussion session which yielded a huge range of ideas and suggestions about following a career in MBA. The discussions gave attendees the opportunity to raise questions and made suggestions about what they would like to get covered in future learning events.

Title: Open Licensing and Online Content

Organizing team:

Date: September 25, 2020

No. of Participants:

Resource Person: Prof Savithri Singh (9873499500)

Report:

Webinar on "Open Licensing and Online Content": An online talk on was organized on September 25, 2020 The talk was given by Prof. Savithri Singh, Country Lead, Creative Commons – India to make the faculty, students aware about the OER, CC licenses and copyright issues while developing e-content. Open licensing and online content are closely related, as open licenses are often used to distribute online content and facilitate its reuse and adaptation. For example, Creative Commons licenses are a popular type of open license that can be applied to various types of creative works, including online content. Creative Commons licenses allow creators to choose the terms under which their works can be used, shared, and modified, while retaining some rights to control their use and attribution.

Prof. Savithri Singh is an expert in the field of open education and has written extensively on the topic of open licensing and online content. Her work explores the potential of open educational resources (OER) to promote equity, access, and quality in education, and the challenges and opportunities of open licensing in the digital age.

ACHARYA NARENDRA DEV COLLEGE

organizes a

WEBINAR

under the aegis of CCGN-Funded Project

OPEN LICENSING AND ONLINE CONTENT

Registration Link:

Conferences/Workshops/Seminars for the year 2019-20

Topic: Techniques in Molecular Microbiology

Organizing Committee: Dr Seema Makhija (Department of Zoology), Dr. Shailly Anand, Assistant Professor, DDUC, Dr Renu Solanki, Dr Archna Pandey (Department of Biomedical Sciences)

No. of Participants: 35

Date: February 25, 2020

Resource Person: Dr Aparna Sharma (9871013149), Dr Sweety Shrimali (9818540058), Dr Rahul Dev (9873087811), Dr Muzaffar (8826753204), Ms S.Sripoorna (9868246400), Ms Jeeva S Abraham (9990392287), Ms Swati Maurya (9873154566).

Report

Workshop on "Techniques in Molecular Microbiology" A one-day inter-college workshop on "Techniques in Molecular Microbiology" was jointly organized by Department of Zoology of Deen Dayal Upadhyaya College & Acharya Narendra Dev College (University of Delhi) under the aegis of Science Foundation & DBT Star College Program on 25th February, 2020 for undergraduate students of biological sciences. The workshop was attended by the following 35 students of B. Sc. (Hons.) Zoology, B. Sc.(P) Life Sciences and others from different colleges of Delhi & outside.

LIST OF EXPERIMENTS COVERED DURING THE WORKSHOP:

1. To amplify the small subunit ribosomal RNA (18S rRNA) gene using gene-specific primers by polymerase chain reaction (PCR).
2. To Perform Agarose Gel Electrophoresis of DNA
3. Separation of proteins by SDS-Polyacrylamide Gel Electrophoresis
4. Collection of ciliates from freshwater and soil samples
5. Culturing of ciliates
6. Identification of ciliates by live cell observation and various staining methods

LIST OF LECTURES COVERED DURING THE TRAINING PROGRAM:

1. Polymerase Chain Reaction for in-vitro amplification of genes

2. Sodium Dodecyl Sulphate Polyacrylamide Gel Electrophoresis – A technique for protein separation
3. Agarose Gel Electrophoresis

INVITED TALKS

1. "Typhoid Diagnostics" by Dr. Chandresh Sharma, Translational Health Science & Technology Institute (THSTI), Faridabad
2. "Innovations in Diagnostics" by Dr. Tarun Sharma, Translational Health Science & Technology Institute (THSTI), Faridabad

The workshop was organized in Lab2 and 3 of the Department of Zoology of Acharya Narendra Dev College. The workshop commenced at 9:30 A.M. with the introductory remarks by Dr. Ravi Toteja, Principal, Acharya Narendra Dev College who apprised students of the various activities being conducted in the college under the DBT Star College Scheme. He also emphasized how this collaborative workshop will be useful from the student perspective as they get to exchange scientific talk with their peers in different colleges and how the workshop will be useful in enhancing their skills in molecular microbiology. Such hands-on workshops and lectures by eminent scientists who are contributing immensely in the field of scientific innovations inculcate a sense of understanding n the student minds which in turns plays a crucial role in making informed decisions in opting science as a career. Dr. Anita Gulati interacted with the students and asked them to share their experiences of the workshop. Feedback form was filled by all students. A student representative from each college shared their views about the workshop. Students appreciated the efforts of the organizers and resource persons. They said this workshop was a good opportunity for them to perform the experiments on their own which had been demonstrated to them or they studied in their textbooks only. Some of the students found the workshop beneficial as they want to pursue their career in life sciences. Dr. Seema Makhija gave vote of thanks to all the resource persons, research scholars and supporting staff. After that Dr. Ravi Toteja, Principal, Acharya Narendra Dev College distributed certificates to the participants, resource persons, organizers and supporting staff. At last, a group photograph was taken.

Title: Molecular Biology Techniques

Organizing committee: Dr Archna Pandey (Department of Biomedical Sciences) Dr Seema Makhija (Department of Zoology)

Date: November 22, 2019

No. of Participants: 56

Resource Person: Dr. Rahul Dev (9873087811), Mr. Vineet Girdharwal (9599316511), Dr. Neelgagan Singh (888006671), Dr. Sushma Bhardwaj (9899270186), Ms. Bhumika Chauhan (7838924652), Mr. Abhay Pratap Singh (9891274760), Dr. Satendra Singh (9871600136), Dr. Rimpy K Chowhan (9560632181), Dr. Ritu Khosala (9873869400), Dr. Deepshikha (9818449560), Dr. Sumit Sahni (9891890065), Dr. Vineet K. Singh (9718013340), Dr. Manoj Kumar Singh (9711474428)

Report:

Workshop on "Molecular Biology Techniques" One Day Hands on workshop on Molecular Biology Techniques was organized by Department of Zoology on November 22, 2019 for the undergraduate and Post Graduate students of G.D.Goenka University.

Students of G.D. Goenka were given an opportunity to visit Following research labs at ANDC: Anti-mycobacterial Drug Discovery Laboratory, Microbial Technology Laboratory, Insect-Vector and Pest Laboratory, Ciliate Biology Laboratory.

Students were given hands on exposure to the following experiments:

(1) Culturing and observation of ciliates/bacteria
(2) DNA Isolation from bacterial culture
(3) Agarose Gel Electrophoresis
(4) Polymerase Chain Reaction and
(5) Phylogenetic analysis using Bioinformatic tools

An e- manual was prepared for the same and shared with the students. Students enjoyed the hands on experience during the workshop.

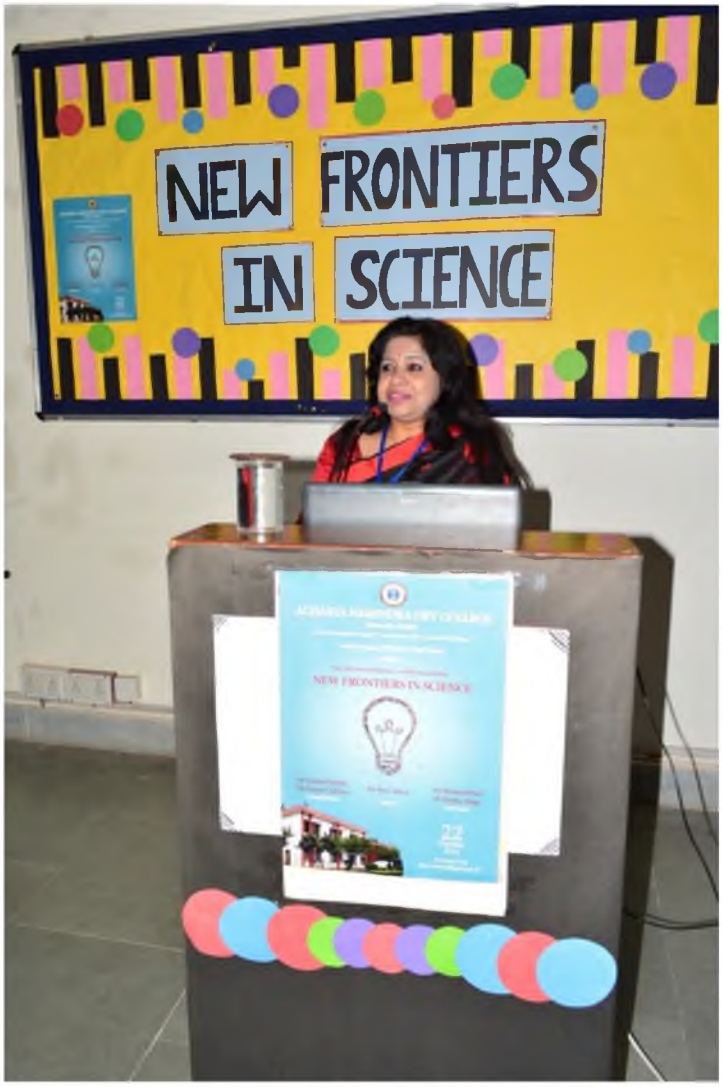
Dr Ashutosh Bharadwaj (9910124636),
Dr S Ramchandran (98187 66438),
Dr Neera Mehra (9810536318)

Report:

Acharya Narendra Dev College under the aegis of DBT Star College Scheme organized a One Day Interdisciplinary Exhibit Presentation on "New Frontiers in Science" in the College premises on 22nd October, 2019. Department of Electronics along with the other departments of the college was actively involved in organizing the event.

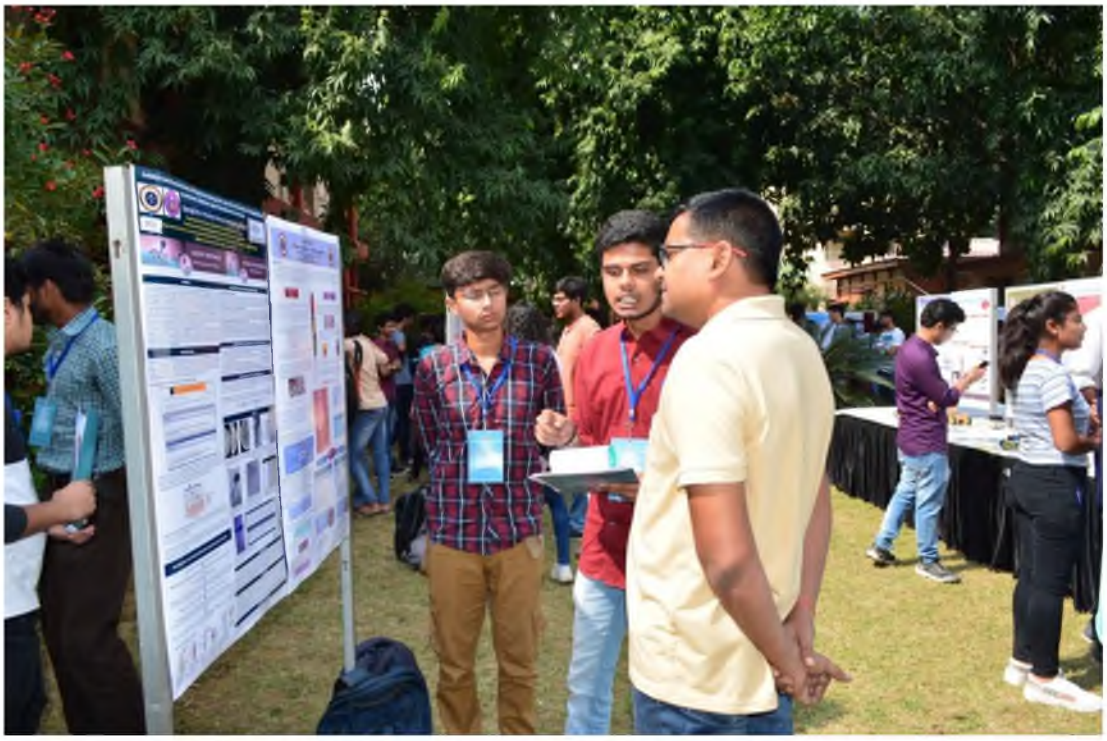
Various innovative projects of inter-disciplinary nature undertaken by UG students under the following heads were considered for demonstration/exhibition,:



1. Star Projects (2017-2019)
2. ELITE projects (2018-2019)
3. Think Lab (2018-2019)
4. Cube (2018-2019)
5. Extramural projects

Ph.D. students who are registered with the college teachers were also encouraged to present their work.

All the participants were also asked to submit an abstract of the /project/research work they wish to present in the exhibition. After a rigorous review process by the screening committee, 50 projects were shortlisted for poster presentation.



The event started with an invited lecture talk by a distinguished lecturer which was followed by poster/exhibitpresentation. The posters/exhibits were reviewed by three panels of judges with each panel having three subject experts. After critical review by the panel of judges, 3 projects were awarded 'best poster'. In addition to this, 6 other projects were also awarded 'consolation'. All the other participating students were also awarded certificates of participation.

As a part of outreach program, students from various schools were also invited. Around 110 from three different schools attended the event. Enthusiasm and curiosity amongst the school students towards latest research trends in science and technology was quite evident. Interaction and sharing of ideas between school students and the participants/presenters made the event even more successful.

Report:

Workshop on "Learning Molecular Biology Techniques" One day hands on workshop "Learning Molecular Biology Techniques" was conducted on September 24,,2019 for B.Sc. (H) Zoology and B.Sc. Life Sciences of the College.It was conducted on September 24,2019 for B.Sc. (H) Zoology and B.Sc. Life Sciences of the College.

Inter-departmental one day hands on workshop "Learning Molecular Biology Techniques" was conducted by Acharya Narendra Dev College under the aegis of DBT Star College Scheme organized in the College premises on September 24, 2019. Student's forms B.Sc. Biomedical Science and B.Sc. (H) Zoology had participated in this workshop. These students had done various molecular biology techniques like PCR, Agarose gel electrophoresis, DNA isolation and DNA digestion with restriction enzymes. Students had good experience by doing various biological techniques and understood their principals and significances. The workshop was of great use for students for those who want to pursue higher studies in biological sciences.

An e-manual was prepared and following experiments were conducted:

(1) Amplification of the small subunit ribosomal RNA (18S rRNA) gene using gene-specific primers by polymerase chain reaction (PCR).

(2) Agarose Gel Electrophoresis of DNA.

(3) Separation of proteins by SDS-Polyacrylamide gel.

(4) PTC test, to analyze Mendelian inheritance and study Hardy-Weinberg Law

Topic: Unravel the Microbial World by Foldscope

Organizing Committee: Dr Rashmi Sharma (Department of Botany) Dr. Seema Makhija (Department of Zoology)

Date: September 09, 2019

Number of Participants: 44

Resource Person(s): Dr Anupama Harshal (9820164415)

Report:

A workshop on 'Foldscope' was organized in the college for the students of Botany and Life Science on September 9, 2019. Dr Anupama Harshal from K. C. College, Bombay was the resource person. 20 students of Botany (H) and 24 students from B.Sc. Life Science attended the workshop.

In this workshop on Unravel the Microbial world by Foldscope by Dr. Anupama Harshal discussed the use of Foldscope in microbiology and demonstrated how to assemble and use the microscope. Foldscope can be assembled by folding a single sheet of paper, and can magnify samples up to 140x. Foldscope is an innovative tool that can be used to explore the microbial world and has many potential applications in education, public health, and scientific research. Participants got the opportunity to observe microorganisms in different samples, such as water and learn about the importance of studying microbes in various fields of science. The workshop may have aimed to inspire participants to continue exploring the microscopic world around us and to promote the use of Foldscope in research and education.

Report:

Workshop on "Learning Science 'The Do It Yourself Way' " A Three day workshop entitled "Learning Science: The 'Do It Yourself' way" was organized for school students jointly by the department of Botany and Zoology under the aegis of DBT-Star Scheme for College, in

collaboration with National Bal Bhavan, Delhi from July 17-19, 2019. 38 students of classes IX-XI from different schools of Delhi and National Bal Bhavan participated in the workshop meant to inculcate their interest and curiosity in biological sciences.

Day 1

The workshop started with lamp-lighting with prayers and in hope to ignite curiosity, dispel the darkness of ignorance, to impart knowledge and gain wisdom. This was followed by motivational words by our principal Dr Ravi Toteja. He exhorted students to make best of this opportunity and participate whole heartedly. He wished the students best for the forthcoming sessions. The sessions started soon after with Dr Geetika Kalra's talk on Microscopy. She took students on a journey from simple magnifying glass and rudimentary microscopes, through the confocal microscopes to the present day electron microscopes. The talk was followed by hands on session on microscopy led by Mr Ravinder Kumar Sagar. Students learnt how to check blood group and then checked their own blood group. They also made blood film and saw blood cells.After lunch they were given a taste of their own genes. In PTC tasting exercise they learnt that our characters are governed by our genes which in turn are inherited from our parents. Students were given PTC strips for home as well and were asked to check their parents/grandparents and siblings for Tasters/Non-tasters. Through this simple experiment they were introduced to the concept of pedigree and Mandelian genetics. Dr Aparna Sharma and Dr Sweety Shrimali were the resource persons for this session.

Day 2 saw students learn to make slides of nerve cells, assemble and use their own foldscope and saw stages of mitosis in onion root tip. The session was held by Dr Seema Makhija and Dr Ravi Toteja. After lunch session was conducted by Dr Geetika Kalra, Dr Yash Mangla and Dr Anita Thakur. Students learnt how to make slides of plant cells and leant the concept of plasmolysis by watching it happen in *Rhoeo* cells. Students prepared slides of *Hydrilla* to watch cytoplasmic streaming.

Day 3 started with isolation of the DNA from cauliflower. Students were introduced to and apprised about the functioning of all the equipments used during the process. Dr Sumit Sahni, Dr Manoj Kumar and Dr Rashmi Sharma. After this students visualized the DNA under transilluminator. Students visualized bacteria by Gram staining under the guidance of Mr Vineet Girdharwal and Dr Sneh Sagar. They were introduced to techniques like Gel Electrophoresis and

PCR by Dr Ravi Toteja. They were shown the butterfly garden of the college by Mr Vinesh. They visited the museum of the department of zoology especially curated for school students by Dr Seema Makhija.

Finally, the valedictory session began by a surprise quiz for the participants. Dr Neelgagan prepared the quiz. Students actively took part in the quiz. There were prizes for each correct answer. It not only broke the monotony of lectures and practical sessions but helped students recapitulate whatever they learnt during the workshop.

Students were given feedback forms to put on record their experience and for us to have an idea of their expectations to help in future planning of similar workshops. Participants were also given platform to express their opinion and suggestion regarding the workshop. They all unanimously agreed that the workshop has made them to appreciate the science of life better and that the workshop will be of great help when it's time for them to make their career choice. A vote of thanks was proposed to acknowledge all those involved in the planning and execution of the workshop and making it a great success. Workshop ended after distribution of certificates and a group photograph. Inaugural and valedictory sessions were hosted by Dr Rashmi Sharma.

Title: Protecting Wildscapes in Contemporary India

Organizing team: Dr Sarita Kumar Dr Monica Misra Dr Seema Makhija Mr Ravinder K. Sagar Dr Aparna Sharma Dr Sweety Shrimali Dr Rahul Dev Dr Neelgagan Singh Mr Sanjay Kumar Mr Vineet Girdharwal Dr Sneh Sagar (Department of Zoology)

Date: August 30, 2019

Number of Participants: 76

Resource Person: Mr Debadityo Sinha (9090848433),
Founder of Vindhyan Ecology and Natural History Foundation

Report:

Mr. Debadityo Sinha, the founder of the Vindhyan Ecology and Natural History Foundation, is a renowned conservationist and wildlife biologist. He is committed to protecting wildscapes in contemporary India through various initiatives, including advocacy, research, and policy interventions. Mr. Sinha emphasized that wildscapes are not only essential for biodiversity conservation but also for ensuring the well-being of human communities. Wildscapes provide ecosystem services, such as clean air and water, pollination, and soil conservation. They also have cultural, spiritual, and recreational values for local communities. Mr. Sinha stated that wildscapes are a vital resource that needs to be conserved and managed sustainably to ensure the well-being of both humans and wildlife. Mr. Sinha highlighted that India has made significant progress in wildlife conservation in recent years, with several flagship programs, including Project Tiger, Project Elephant, and the National Wildlife Action Plan. However, he also highlighted some of the challenges that conservation efforts face in contemporary India.

One of the major challenges is the increasing human-wildlife conflict due to habitat loss and fragmentation. Human activities, such as deforestation, mining, and infrastructure development, have resulted in the loss of wildlife habitat and fragmentation of landscapes. This has led to the displacement of wildlife, which often results in human-wildlife conflict.

Another challenge is the lack of public awareness and participation in conservation efforts. Mr. Sinha emphasized the need for public education and awareness programs to sensitize people about the importance of wildscapes and their role in conservation.Mr. Sinha also shared some of the initiatives taken by the Vindhyan Ecology and Natural History Foundation to protect wildscapes in contemporary India. The foundation works with local communities to promote sustainable

livelihoods that are compatible with wildlife conservation. It also conducts research and advocacy on policy issues related to conservation.

The talk ended with a vote of thanks to the eminent speaker and alumni of the college.....

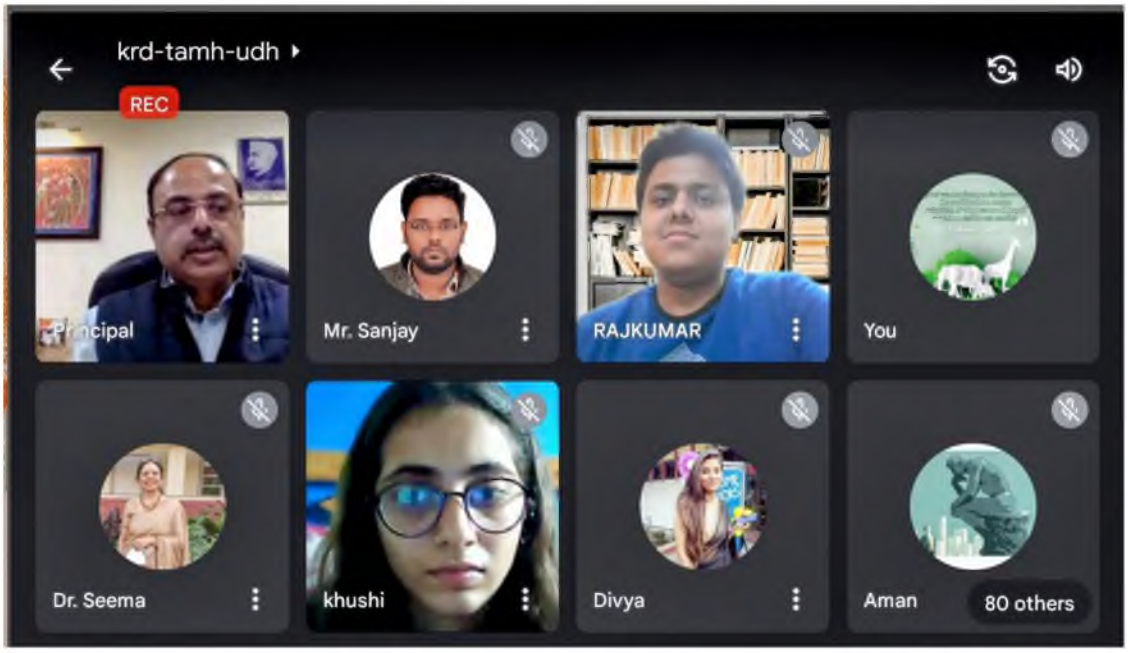
Title: The Growth of Linnean thought: Impact of common descent and current understanding

Organizing team: Dr Monica Misra, Prof. Seema Makhija (Department of Zoology)

Date: May 11, 2020

Number of Participants: 48



Resource Person: Dr Himender Bharti (9356785454)

Report:

Dr. Himender Bharti gave a talk on "The Growth of Linnean Thought: Impact of Common Descent and Current Understanding". The talk focused on the evolution of Linnean thought and its impact on our current understanding of biology.Dr. Bharti began by discussing the Linnean system of classification, which was developed by the Swedish naturalist Carl Linnaeus in the 18th century. This system is based on a hierarchical structure of classification, with organisms grouped into increasingly specific categories, from kingdom to species. Linnaeus's system was based on morphology, or physical characteristics, and did not take into account evolutionary relationships.However, with the development of the theory of evolution by natural selection in the 19th century, scientists began to recognize the importance of evolutionary relationships in classification. The concept of common descent, or the idea that all living things share a common ancestor, became a key tenet of evolutionary theory.

Dr. Bharti discussed how this concept of common descent has had a significant impact on Linnean thought and classification. Scientists now use phylogenetic trees, which show the evolutionary relationships between organisms, to classify living things. These trees are based on molecular data, such as DNA sequences, as well as morphology. Dr. Bharti also discussed some of the challenges that arise when using a phylogenetic approach to classification. For example, convergent evolution, or the evolution of similar traits in distantly related organisms, can make it difficult to determine evolutionary relationships based on morphology alone. In these cases, molecular data can be particularly useful in determining the true relationships between organisms.

Overall, Dr. Bharti's talk highlighted the evolution of Linnean thought and the importance of the concept of common descent in our current understanding of biology. By recognizing the evolutionary relationships between organisms, we can better understand the diversity of life on Earth and the processes that have shaped it over time.

Dr Princy Hira	9711070176

Report:

Workshop on "Learning Science by Doing Science" An interdisciplinary workshop titled "Learning Science by Doing Science" was organized by Departments of Botany, Zoology, Physics and Chemistry in collaboration from 18 – 22 June 2019. The main objective was to give the students an exposure to cutting-edge research in frontier areas of science besides imparting advanced hands-on laboratory skills to them. The workshop began with sessions on physico-chemical analysis of soil coordinated by faculty from chemistry department Dr.Pooja Bhagat and Dr. Geetu Gambhir. The students were made to determine the pH of soil accurately in the laboratory by electrometric method. The investigation assumes importance because determination of pH in soil is important as it plays a great role in availability of nutrients to plants. pH determination is useful for soil classification on the basis of acidity or alkalinity. The electrometric determination of pH by a pH

meter was based on measuring the e.m.f. (millivolts) of a pH cell both a reference buffer and then with a test solution. Further experiments on determination of organic carbon present in the soil as also calcium carbonate (free lime) were undertaken. Sessions on Surface Plasmon Resonance (SPR) – Working Principle and Applications were coordinated by faculty from Department of Physics – Dr. V. Bhasker Raj and Dr.Arijit Chowdhuri. The students were taught how technique involved detection of changes in refractive index at the surface of a sensor whence the sensor comprised of a glass substrate and thin gold coating. The concept of light passing through the substrate and getting reflected off the gold coating at certain angles of incidence, whence a portion of the light energy couples through the gold coating and creates a surface plasmon wave at the sample and gold surface interface. The students were given hands-on training on a table-top SPR machine and made to perform the following three experiments a) To measure the surface plasmon resonance (SPR) reflectance curve at metal (gold)-air interface. b) To find the optical properties of metal film by fitting the experimental SPR data with Fresnel's equations. c) To determine plasma frequency and surface plasmon frequency of a metal. The students observed that angle of incident light required to sustain the surface plasmon wave was very sensitive to changes in refractive index at the surface (due to mass change), and these changes were noted to be critical to makingit a very sensitive technique. Sessions on studies on effect of environmental degradation on plant health by estimating chlorophyll and ascorbic acid content were coordinated by faculty members from Department of Botany – Dr. Yash Mangla and Dr.Charu Khosla Gupta. Students were given idea about how plants responded to air quality degradation, how their health gets impacted at molecular, cellular, physiological, and behavioural level, and about the mechanisms by which the plants attempt to overcome the ill-effects of air pollution and how their health weakens. All of the aforementioned were indirectly measured by way of estimation of chlorophyll content and ascorbate content in plants. The plants studied in question were sourced from clean and varying polluted environs.

Title: "Two-day workshop on "Hands-on to Computational Biology for (meta)genomic analysis" jointly organized by Department of Zoology and Department of Botany, Acharya Narendra Dev College under the aegis of DBT Star College Scheme"

Organizing team: Dr Rashmi Sharma (Department of Botany)
Dr Seema Makhija (Department of Zoology)

Date: April 04-05, 2019

No of Participants: 37

Resource Persons: Dr Utkarsh Sood (9999913310),
Dr Vipin Gupta (9015862845)

Report:

A two-day workshop on 'Hands-on to Computational Biology for (meta)genomic analysis' was organized jointly by Department of Zoology and Department of Botany, Acharya Narendra Dev College under the aegis of DBT Star College Scheme from April 4-5, 2019. The workshop was conducted by two resource persons: Dr. Vipin Gupta and Dr. Utkarsh Soodfrom PhiXGen Pvt. Ltd. This workshop was coordinated by Dr. Ravi Toteja, Acting Principal, ANDC, Dr. Seema Makhija and Dr. Rashmi Sharma.This workshop on 'Hands on to Computational Biology for (meta) genomics analysis' was an attempt to empower the next generation to take up the bigger challenges in environmental microbiology. A total of 37 participants attended the workshop. It was a two-day long session where hands on modules were conducted to understand the workflow of bioinformatic tools to analyze huge sequence datasets. The workshop modules were prepared keeping in mind the need of basic to moderate level knowledge by students who wants to enter exciting area of genomics and metagenomics.

The workshop began with the welcome address by Dr. Ravi Toteja at the web center. He welcomed the resource persons and introduced the students to this workshop. This was followed by detailed sessions and hand on experience about the methodology of (meta)genomic data generation, Linux operating system and cloud computation, bacterial genomic assembly and annotation, metagenomic diversity analysis and Systems biology.

Before hands on modules, Dr. Utkarsh and Dr. Vipin introduced the work flow of Genomics and Metagenomics data analysis. They motivated the students to properly design the study for the bioinformatic analysis and then start venturing into the computational tools that are needed for

the analysis. Dr. Vipin started **Module 1** with a brief introduction about Linux and Ubuntu operating software and emphasized mainly on knowing your machine and minimum hardware requirement for starting any analysis. Further, **Module 2** by Dr. Utkarsh focused on cloud computing using google genomics. Students were told how without having a workstation they can analyze the biological data using cloud computation on google genomics platform. Installation of Ubuntu was also discussed in this module followed by **Module 3** on Genome Assembly. With the basic overview of operating system, participants performed hands on trial and learned about genomic assembly using ABySS 2.1.5 software individually. Students were told about de novo and reference-based assembly and several parameters on which the ABySS assembler runs. The first day of workshop ended after the assembly results of ABySS were obtained and discussed in details.

Day 2: April 5, 2019

The second day started with the interaction session where students asked their doubts and clarified their queries on the previous modules. This was followed by **Module 4** on Assembly Validation using Quast. First, Dr. Vipin explained the need for validating any assembled genome and the quality scores obtained. Thereafter the validation of genomic assembly using the quast1.2.0 software was performed individually by the participants. Further, the assembled and validated genome was annotated using the RAST server and Glimmer 3 gene caller. This was followed by **Module 5** on Metagenomics which began with metagenomic diversity analysis using MetaPhlAn and followed by its visualization by GraPhlAn tool. **Module 6**focused on systems biology approach for microbiome annotations and protein-protein interactome models. A demonstration of system biology tools for studying protein-protein interactions using STRING database and Cytoscape was performed. A genomic subset of proteins was mapped into STRING database and interaction analysis was performed using Cytoscape standalone tool with perfused circular layout.

A healthy discussion between the participants and resource persons for clearing all the doubts of the participants succeeded the modules. Following the enthusiasm among the students for discussing their doubts which took the workshop at the next level of interaction, students were asked to share their experience about the workshop.

This training workshop certainly helped the participants gain full knowledge of basic bioinformatics analyses and design their experiments for solving problems related to meta(genomic) data. At last, Dr. Ravi Toteja gave a vote of thanks and felicitated the resource persons with token of appreciations followed by distribution of certificates to the participants.

Welcome
to

Date: March 08, 2019

No of Participants: 150

Resource Persons: Dr. Rina Singh, Dr. Sheetal Gangdotra, Dr. Pranalee Thorat

Report:

Mini Symposium on "International Women's Day" The College organized a "Mini Symposium on International Women's Day" on March 8, 2019 in Collaboration with CSIR for raising awareness and highlighting women's achievements. N. Kalai Selvi, Director CSIR-Central Electrochemical Research Institute was available on line and interacted with students about Green Energy for Clean India. Dr. Rina Singh, Scientist CSIR Central Road Research Institute enlightened the gathering about Nanotechnology for Green Environment. Dr. Sheetal Gangdotra, Scientist CSIR-IGIB delivered a talk on Mycobacterium: Learning from the Best. Dr. Pranalee Thorat, Scientist CSIR-NPL very interestingly explained about the history of units of time and frequency.

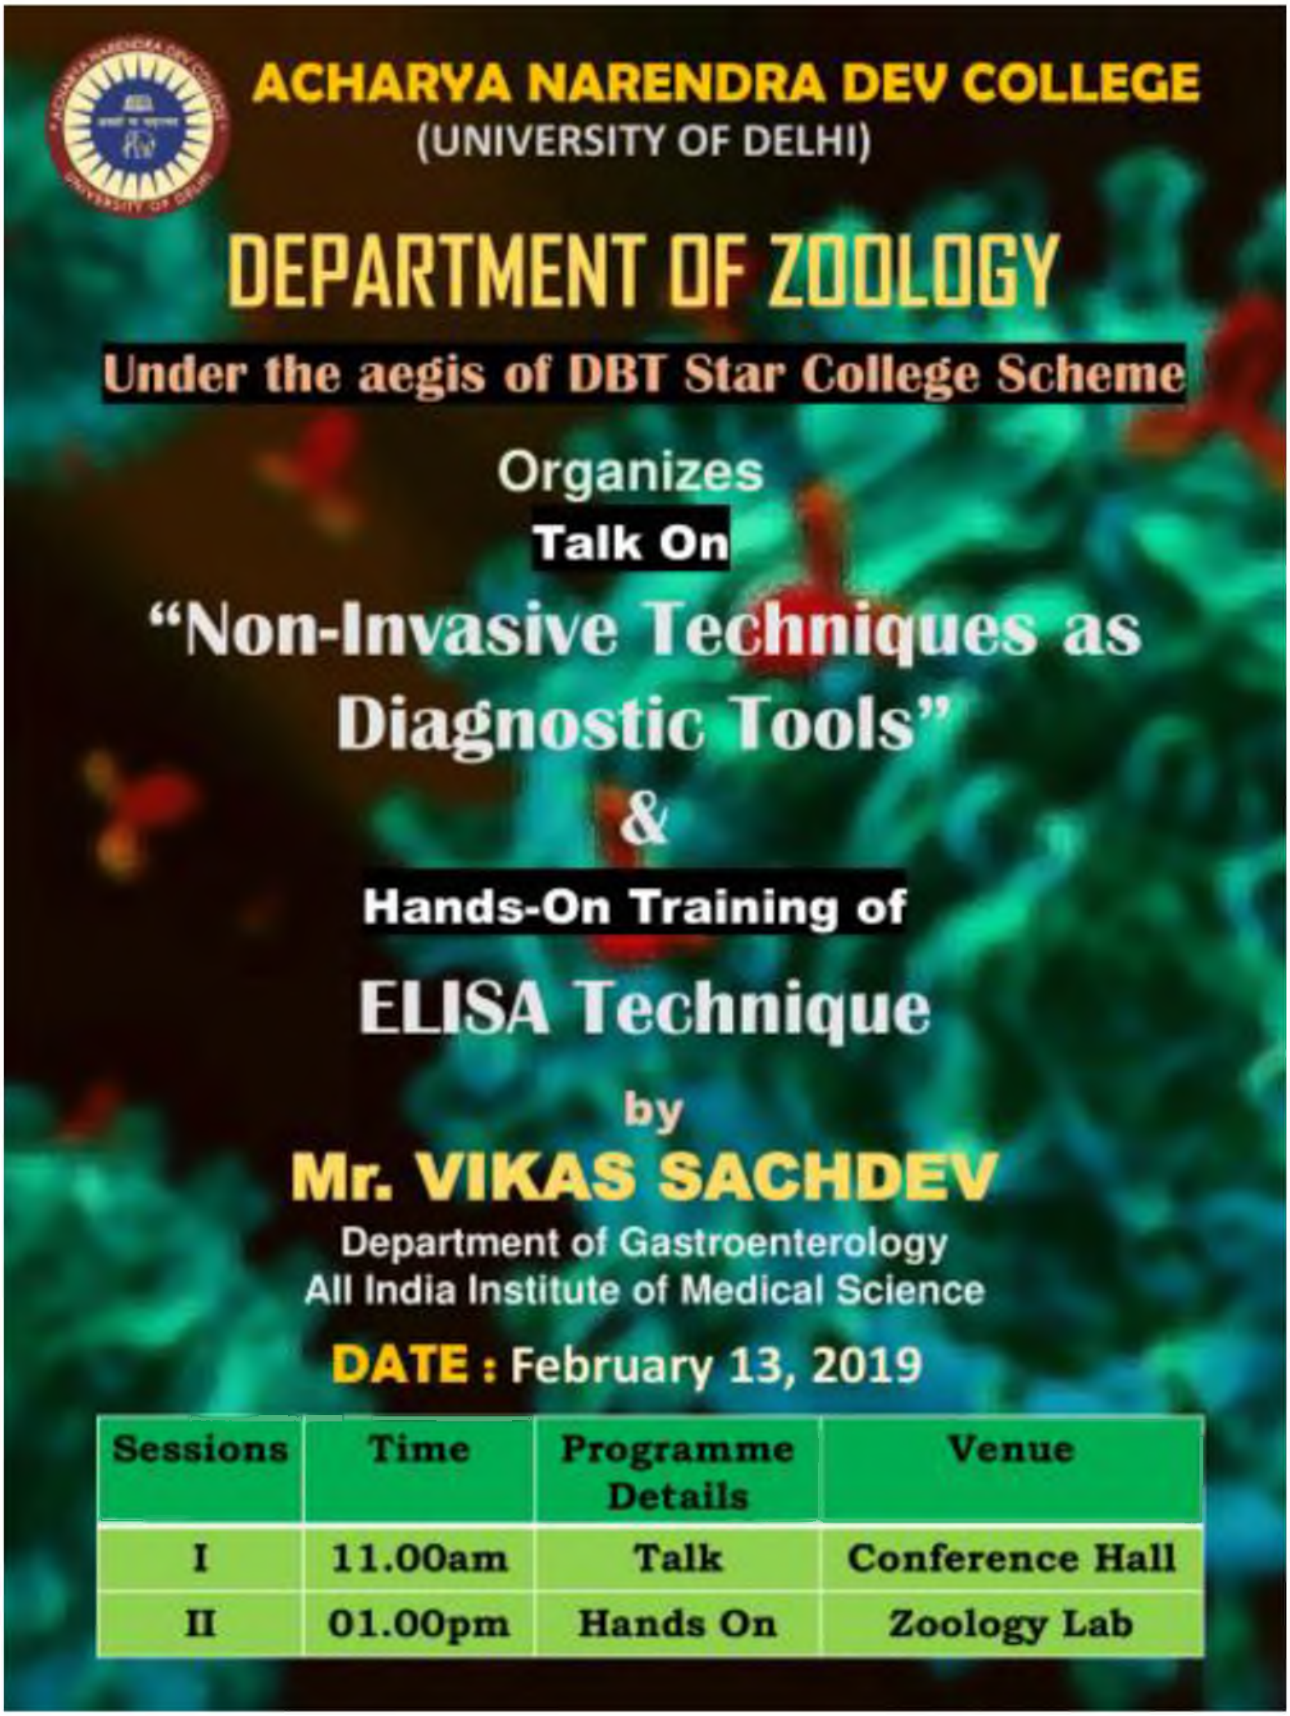
Title: "Hands on Training on "ELISA Technique"

Organizing team: Dr. Ravi Toteja Dr. Seema Makhija (Department of Zoology)

Date: February 13, 2019

No of Participants: 90



Resource Person: Mr Vikas Sachdev (9868740625)

Report:

Workshop and Hands on Training on "ELISA Technique" (under the aegis of DBT Star College Scheme) The resource person was Mr. VikasSachdev from Department of Gastroenterology, All India Institute of Medical science, New Delhi. The lecture was attended by the students of B.Sc. (H) Zoology and B.Sc. Life Science. In his lectured Mr.Sachdev described various techniques like lithotripsy, radiological techniques, measurements of temperature, BP, heart rate and many others. Immediately after the lecture, students were given hands on training on ELISA (Enzyme linked immunosorbent assay), a diagnostic technique. Mr Sachdev started with the theory of ELISA technique. The kit used for doing hands on was kindly gifted by Mr. Sachdev. The kit used was for diagnosis of pancreatitis. For hands on, 6 groups of 4 students each were formed. Students were explained the various steps and principle involved in the process of carrying out ELISA.

Report:

Education Conclave "Education Deconstructed: Dialogues with Experts" The College organized an Education Conclave "Education Deconstructed: Dialogue with Experts" on Friday November 2, 2018 in its premises. The scope of the conclave was to deliberate among academics and academic administrators the new initiatives with education and pedagogy which ANDC has adopted. The conclave was attended by a educationists, scientists, researchers and policy makers. Professor Bhusan Patwardhan, Vice-chairman, University Grants Commission (UGC) was the Chief Guest. He delivered the inaugural address. This was followed by two interactive sessions where the participants deliberated on the contemporary challenges in undergraduate education in India, while keeping in context the initiatives at ANDC. Participants also visited various research laboratories and other facilities available to students in the college.

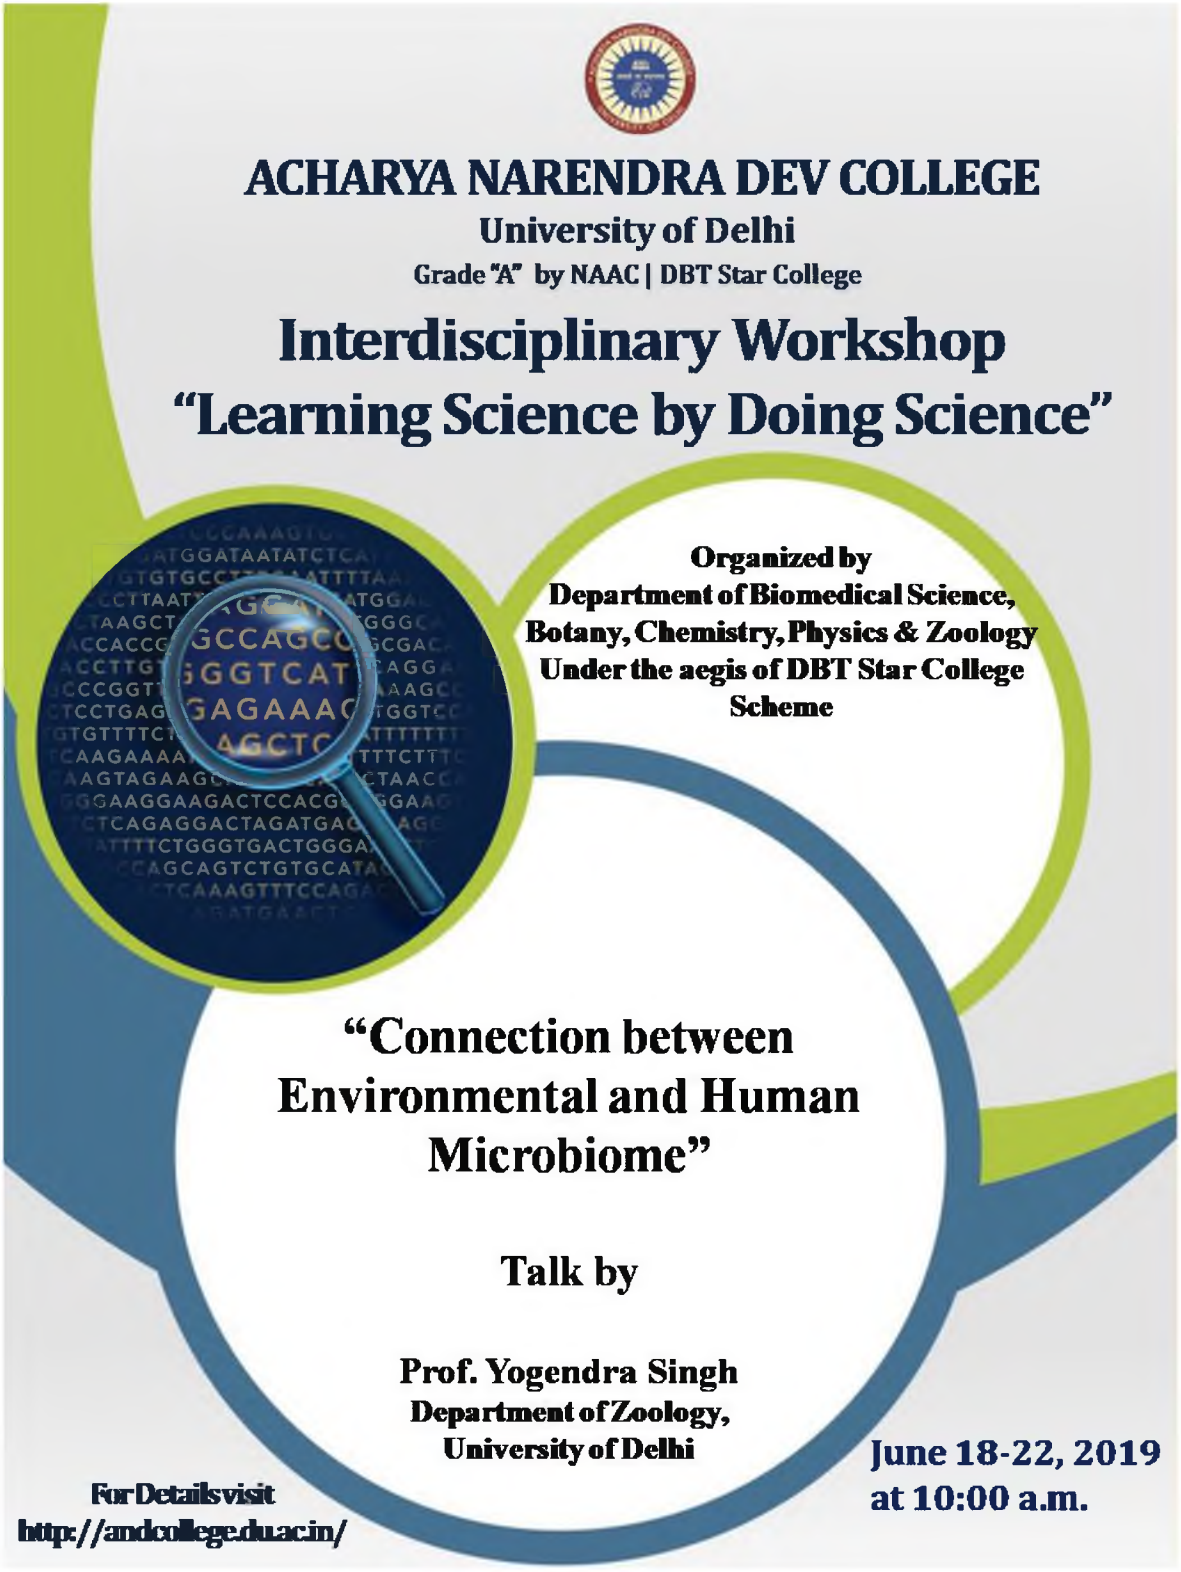
Title: Connection between Environmental and Human Microbiome by Prof. Yogendra Singh Professor, Dept of Zoology University of Delhi

Organizing team: Dr Charu Khosla Gupta (Department of Botany) Dr Pooja Bhagat Dr Geetu Gambhir (Department of Chemistry) Dr Arijit Chowdhuri (Department of Physics) Dr Seema Makhija (Department of Zoology)

Date: June 18, 2019

No of Participants: 45

Resource Person: Prof. Yogendra Singh



Report:

Prof. Y Singh delivered a talk on **Connection between Environmental and Human MicroBiome** in the Seminar Hall of the college. Prof. Singh began by explaining the concept of microbiome. He emphasized that microorganisms play a crucial role in maintaining human health as they help in digestion and immunity. He also discussed that human microbiome is also influenced by several environmental factors including diet. He also highlighted the potential benefits of studying the connection between the environment and human microbiome. He explained that research in this field will help us understand the impact of environmental changes on human health and develop strategies to mitigate the negative effects.

Finally, Prof. Singh concluded by calling for collaboration between microbiologists, environmental scientists, and public health experts to study the connection between the environment and human microbiome.

The talk was informative and thought provoking. The talk ignited young minds on the need for interdisciplinary research to address this critical issue. The session was concluded with a vote of thanks to Dr. Singh for delivering a very informative and engrossing talk. The principal and the

administrative staff of the department were also thanked for providing support, infrastructure and facilitating the smooth conduct of the event.

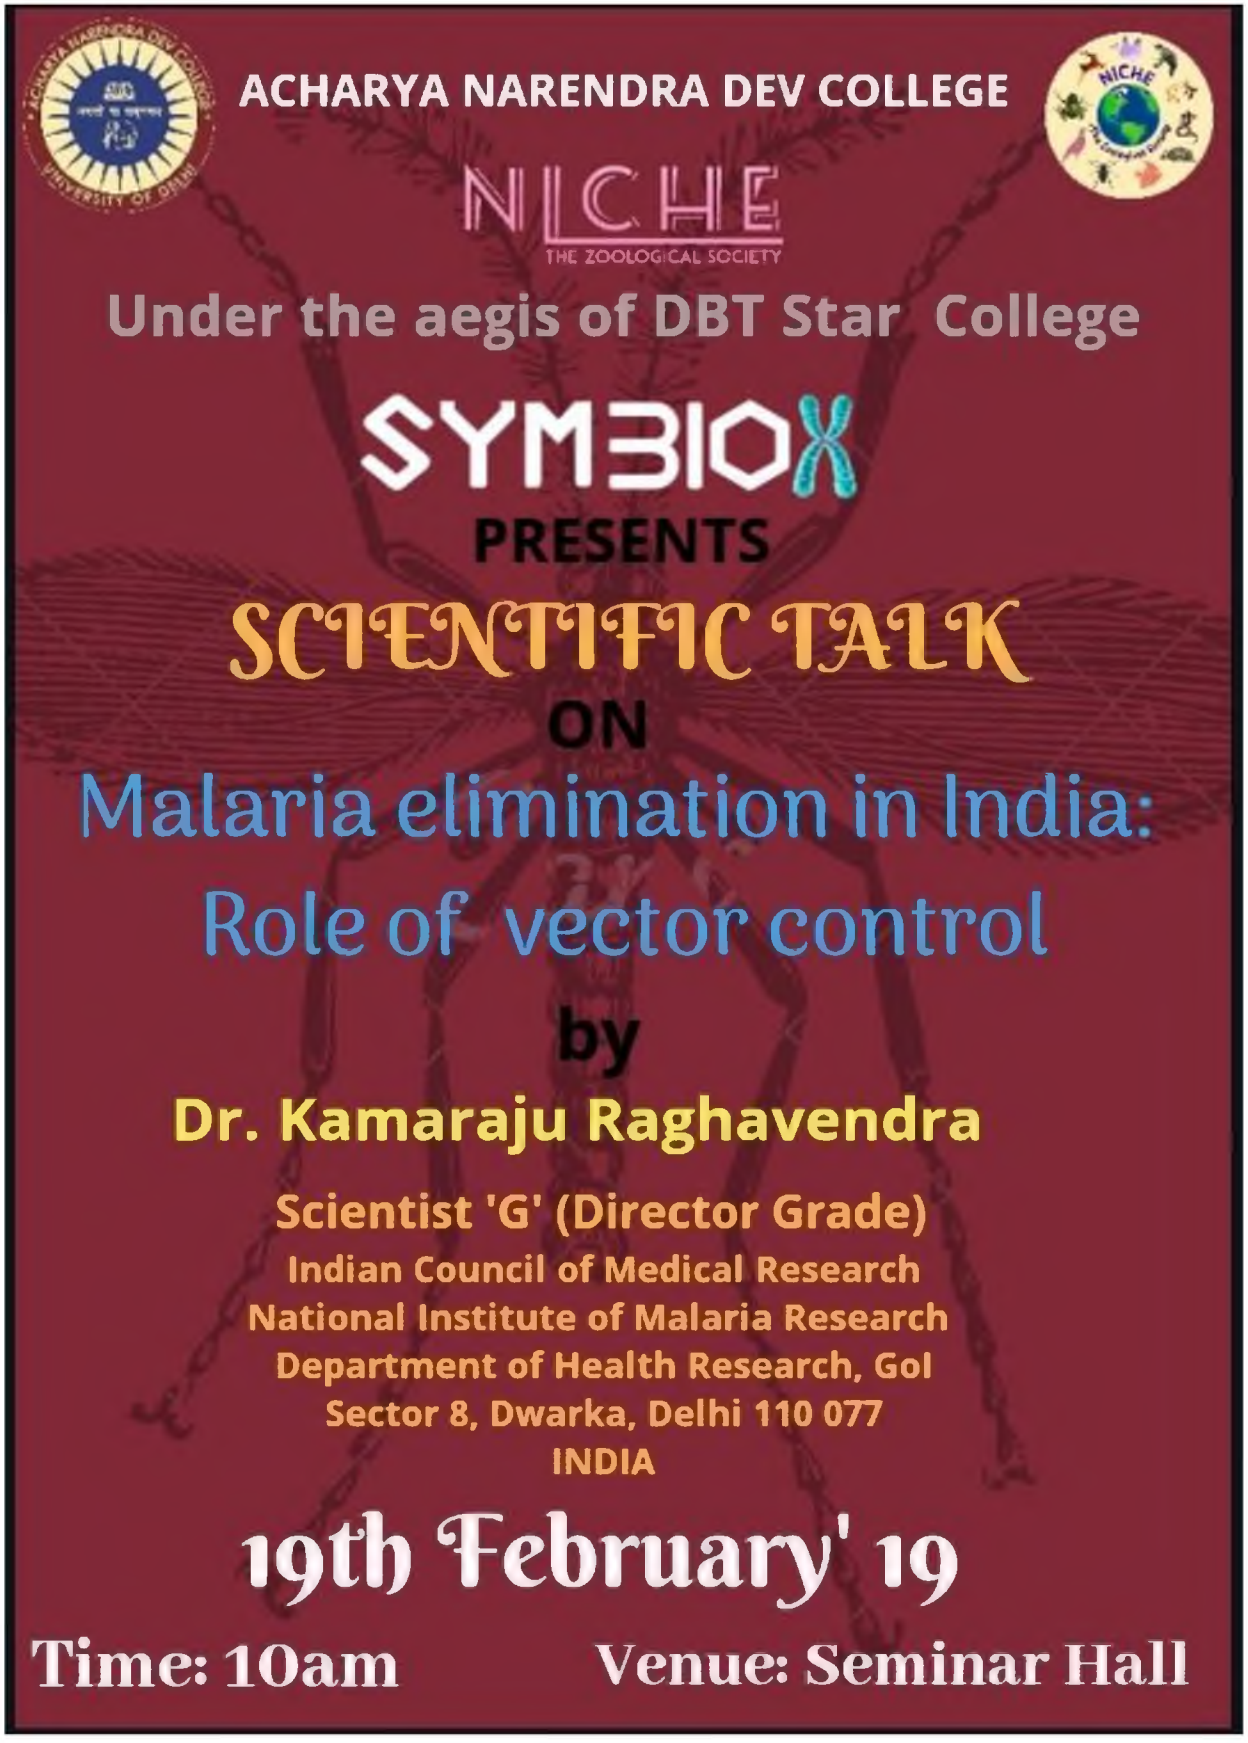
Title: Malaria elimination in India: Role of vector control by Dr Kamraju Raghavendra, Scientist G, ICMR, NIMR, Delhi, India

Organizing Committee: Faculty, Students and Support Staff, Department of Zoology

Date: February 19, 2019



Number of Participants: 66

Resource Person: Dr Kamraju Raghavendra

Report:

Niche, the Zoological Society of Acharya Narendra Dev College organized a talk on Malaria elimination in India: Role of vector control by Dr Kamraju Raghavendra, Scientist G, ICMR, NIMR, Delhi, India on February 19, 2019 under the aegis of DBT Star scheme. The talk begins with an introduction to the burden of malaria in India. The speaker emphasized the importance of vector control in the spread of malaria. One of the Stratagey discussed by the speaker was use of insecticide- treated bed nets (ITNs). The speaker suggested the need for government to distribute ITNs to high-risk populations. The talk was followed by a brief interactive session where Dr. Raghavendra answered the students' queries with respect to her talk and other scientific phenomena. The session was concluded with a vote of thanks to Dr. Raghavendra for delivering a very informative and engrossing talk. The principal and the administrative staff of the college were also thanked for providing support, infrastructure and facilitating the smooth conduct of the event.

Title: "Contemporary Approaches in Anti-Malarial Drug Discovery" Dr. Shailja Singh Associate Professor Special Center for Molecular Medicine, JNU

Organizing Committee: Faculty, Students and Support Staff, Department of Zoology

No of Participants: 73

Resource Person: Dr. Shailja Singh (9868512025)

Report:

Niche, the Zoological Society of Acharya Narendra Dev College organized its inaugural talk on October 10, 2018 under the aegis of DBT Star scheme. Eminent researcher Dr. Shailja Singh, Associate Professor, Special Center for Molecular Medicine, Jawaharlal Nehru University was invited as the guest speaker. The event started with the lighting of lamp of knowledge which was followed by welcome address by the Principal, Dr. Savithri Singh.

The guest speaker, Dr. Shailja Singh, delivered an enchantingtalkon '*Contemporary Approaches in Antimalarial Drug Discovery'*. She explained the mechanism of *Plasmodium* parasite infection in human beings and the phases/proteins in parasite life cycle that can be used as the target for formulating antimalarial drug. She discussed how natural chemical diversity can be explored by modernized and systematic approaches to develop novel compounds for combating malaria. The talk was concluded with motivation of students where she explained the qualities of a good researcher: interest, inquisitiveness, commitment, excelling, knowledge, recognition, scholarly approach and integration. The talk was followed by a brief interactive session where Dr. Singh answered the students' queries with respect to her talk and other scientific phenomena. The session was concluded with a vote of thanks to Dr. Shailja Singh for delivering a very informative and engrossing talk. The principal and the administrative staff of the college were also thanked for providing support, infrastructure and facilitating the smooth conduct of the event.

A few pics of the event are as follows.

International Symposium on Ciliate Biology 2018 (ISCB 2018) with International Research Coordination Network – Biodiversity of Ciliates (IRCN-BC), an affiliate society of International Society of Protistologists (ISOP)

Organizing team: Dr. Ravi Toteja and Dr. Seema Makhija

Resourse Person(s):
Dr Alan Warren, Natural HistoryMeuseum, Cromwell Road, London
Prof Alexey Potekhin, of Biology, Saint Petersburg State University, Saint Petersburg
Dr Antonietta La Terza, School of Biosciences and Veterinary Medicine, Uni Via Gentile III da VaranoCamerino 62032, Macerata, Italy
Prof Bettina Sonntag, University of Innsbruck, Department for Limnology, Mondsee
Carlos Alberto Durán-Ramírez, University of Calcutta, Facultad de Ciencias, UNAM. Circuito ext. s/n Coyoacán 04510
Prof Cristina Miceli, University of Camerino, School of Biosciences and Veterinary Medicine, Camerino
Prof Elena Sabaneyeva, Saint Petersburg State University,
Maksim Melekhin, Saint Petersburg State University, Faculty of Biology, Saint Petersburg
Dr Rosaura Mayén-Estrada, Lab. Protozoología, Depto. Biol. Comparada, Fac. Ciencias, Circuito Ext. s/núm. Av. Universidad 3000, Ciudad de México
Dr Anastasia Shatilovich, Saint Petersburg State University, Faculty of Biology, Saint Petersburg
Prof Haibo Li, Institute of Oceanology, Chinese Academy of Sciences, China.
Dr Biplob Kumar Modak, University of Kalyani.

Date: April 04-06, 2018

Number of Participants: 251

The 2nd International Symposium on Ciliate Biology (ISCB 2018) convened by Dr Komal Kamra, co-convened by Dr Renu Gupta, Dr Seema Makhija and Dr Ravi Toteja, was organized at the India Habitat Centre in New Delhi , India, from April 04 - 06, 2018. Three colleges of the University of Delhi: Acharya Narendra Dev, Maitreyi and SGTB Khalsa led by their Principals Dr Savithri Singh, Dr Haritma Chopra and Dr Jaswinder Singh respectively played a pivotal role in providing logistic support for the smooth run of the symposium. The symposium was a result of synergy with International Research Coordination Network for Biodiversity of Ciliates (IRCN-BC), an affiliate society of International Society of Protistologists (ISOP). Financial support came from international agencies such as ISOP and IUBS, and Indian agencies CSIR, DBT, DRDO, DST-SERB, ICMR, IMTECH, INSA, and ZSI. The symposium was inaugurated by
Dr Mahesh Sharma, Minister of State, Union Ministry of Tourism and Ministry of Environment, Forest and Climate Change. The aim of holding of the symposium was to provide a platform to scientists in ciliate research to present their findings before the International Protistology community, and to expose undergraduate students to the subject on a bigger canvas. It was attended by over 300 Indian delegates and 9 foreign delegates.

The symposium comprised 22 oral and 57 poster presentations delivered by participants covering various aspects of ciliate research: biodiversity, ecology, evolution, role of ciliates in the food web of soil and water ecosystems, indicators of pollution and in bioremediation fields.

Three presentations mainly focused on ciliates as bioindicators of environmental quality. Dr Komal Kamra threw light on ciliates as bio-indicators of water quality collected from different locations of the River Yamuna, Delhi, India. Dr Alan Warren presented investigations on the relationships between ciliate communities and physico-chemical analysis of water samples collected from Jiazhou Bay, on the Yellow Sea Coast of NE China. Dr Antonietta La Terza gave a lecture on using ciliates as indicators of ecosystem health where the ciliated protists can be used in prognostic and diagnostic assays to detect overall ecosystem impairment.

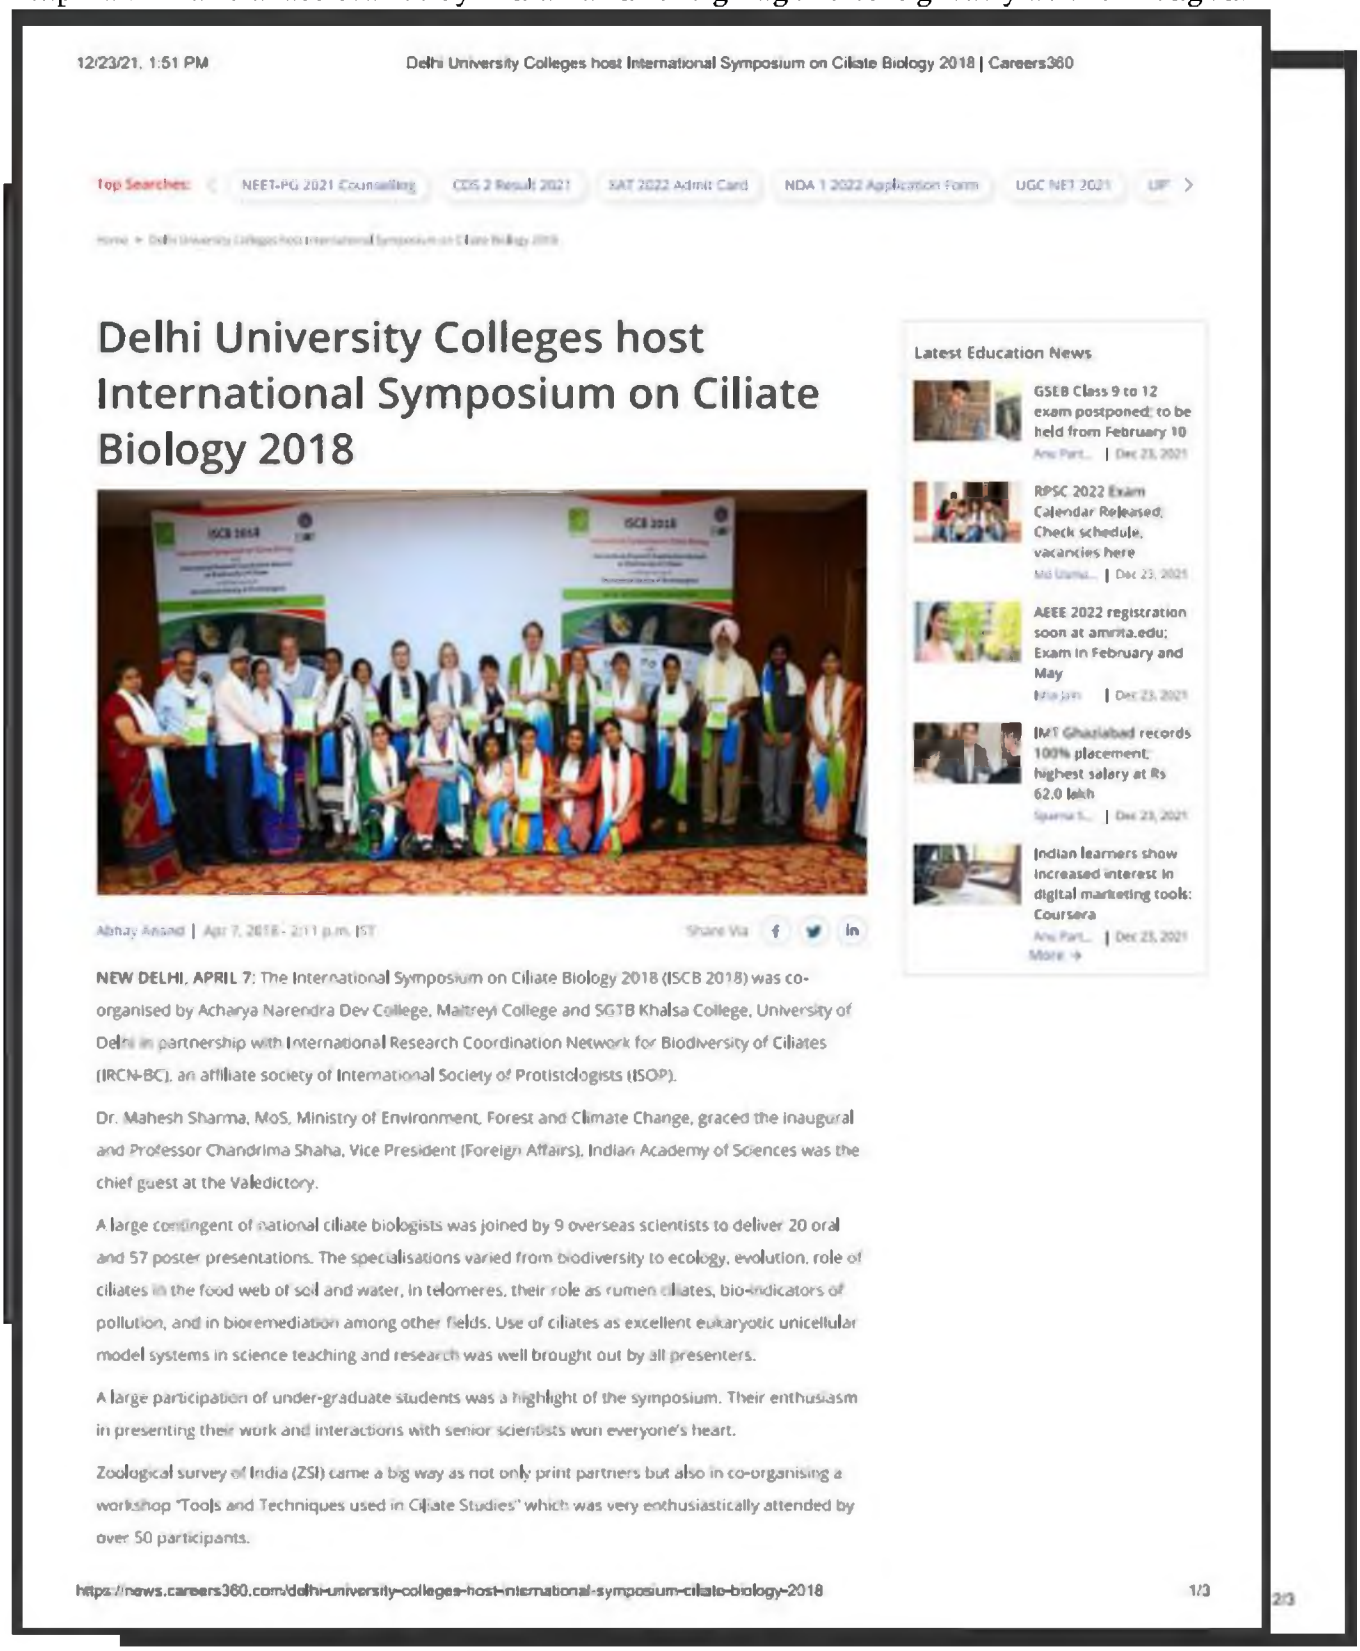
Three presentations focused on use of ciliated protists for cytotoxicity testing. Prof Rup Lal gave an overview on the effect of pesticides on growth and DNA and protein synthesis by using *Styolonychia notophora* as the model system. This pioneer work on ciliates has helped in using bacterial system for evaluating various environmental stress conditions and helped in entering into the field of genomics and metagenomics. Prof Nageswara Rao Amanchi gave a talk on cytotoxic effects of Cypermethrin on both morphological and physiological changes in two freshwater ciliates *Paramecium caudatum* and *Blepharisma intermedium* and concluded that these two freshwater ciliates can be used as models for ecotoxicological studies. Similar deliberation by Dr Ravi Toteja delved on the effects of heavy metal toxicity on freshwater ciliates. Increase in the activities of antioxidant enzymes and in the transcriptional expression of stress genes (like hsp70 and metallothionein) were discussed concluding that these enzymes and stress genes can be used to evaluate heavy metal toxicity.

Seven oral presentations focused on ciliate biodiversity. Prof Rosaura Mayén-Estrada gave an overview on family Vorticellidae where detailed information on more than 250 free living and ectosymbiotic species of crustaceans was discussed asking for revision of the status of this family. Dr Anastasia Shatilovich delivered a talk on ciliate diversity in the permafrost sediments and in the profiles of Tundra soils. Prof Alexey Potekhin gave an overview on the hidden diversity of genus *Paramecium* where he reported revision of two subgenera of *Paramecium* and description of two new *Paramecium* morphospecies. Dr Shashi's presentation was on four hypotrichous (3 urostylids and one stichotrichid) ciliated protists isolated from Maharashtra, India. Dr Santosh Kumar gave morphological and molecular description of two different species one each of *Sterkiella*and *Fragmospina* collected from soils of Silent Valley National Park, India. Ms Harpreet Kaur gave the description of a novel freshwater oxytrichid ciliate *Gastrostyla* sp. and compared it with other reported species belonging to genus *Gastrostyla*using molecular phylogeny. Dr Jasbir Singh talked about ciliate biodiversity across Sikkim mainly focusing on hypotrichous ciliates belonging to family Oxytrichidae which were predominantly present in that region.

Ciliate ecology was the focus of three presentations. Dr Sai Elangovan S reported the interaction between the environment and diversity of tintinnids (loricate ciliates) inhabiting mangrove proximal zone waters of south Andaman. A similar talk was delivered by Dr V Ratna Bharathi who reported the correlation between physicochemical parameters and diversity of protozooplanktons at Konam reservoir, Andhra Pradesh, India. Ms Anjusha presented the diversity of a loricate and loricate ciliates in estuaries, coastal waters an open ocean waters at Kochi, India.

Two presentations focused on parasitic ciliates. Prof Probir Kumar Bandyopadhyay gave an overview of controlling the growth of fish parasitic trichodinid ciliates by using fresh garlic-bulb. Use of garlic reduced the trichodinids burden of goldfish significantly. Dr Amlan Kumar Mitra

talked about the diversity and distribution of ectoparasitic ciliated protists belonging to family Trichodinidae which are responsible for trichodiniasis disease in fishes.



Prof Cristina Miceli delivered a talk on frameshift mutation in the hsp70 gene of Antarctic ciliate, *Euplotes focardii* due to which this heat-shock chaperone did not get induced under thermal stress but was induced to normal oxidative stress, thus concluding that ciliates can act as better model systems to study environmental adaptation. Prof Elena Sabaneyeva delved on various endosymbionts detected in the ciliate *Paramecium* sp. Dr Seema Makhija gave an overview of progression of ciliate biology research at University of Delhi where different kinds of research have been and are currently being done.

Poster presentations were grouped into three themes: ciliate experimental, ciliate review and biological sciences. Fifty seven delegates (including undergraduates, post-graduates, research scholars and faculty members) actively participated. Awards were given to the three best posters in each category. Under the theme "ciliate experimental", Ms Jeeva Susan Abraham, Mr Maksim Melekhin and Ms Sheeba and Ms Anjali Yadav received the best poster awards. Ms Abraham delivered a presentation on inferring phylogenetic positioning of three spirotrich ciliates by using modern molecular techniques. Mr Melekhin explained about species divergence in genus *Paramecium* by studying micronucleus morphology, 18S rDNA and COI gene. Ms Sheeba and Ms Yadav gave a presentation on phylogenetic study of *Blepharisma* sp. using molecular markers like 18S rDNA and ITS gene. Under the theme "ciliate review", Ms Arveen Kaur, Ms Tanvi Gupta and Mr Harsh Thakur & Mr Priyank Rawat received the best presentation awards. Ms Kaur gave her presentation on symbiotic relationship of *Chlorella* sp. with the ciliate *Paramecium bursaria*. Ms Gupta delved on telomeric G-Quadruplex DNA structure in various ciliate species. Mr Thakur & Mr Rawat made a presentation on various molecular marker genes to study the phylogeny of any species. Under the theme "biological sciences" Dr Jasmine Purushothaman and Ms Akhila Anil, Mr Amit Babu& Mr Sarthak Khurana received the best poster presentation awards. Dr Purushothaman presented a paper on diversity and distribution of testate amoeba in different ecosystems in urbanized areas of Kolkata, West Bengal, India. Ms Anil, Mr Babu and Mr Khurana gave presentation on *Moina* which can be used as a new model system for studying neurodegenerative disorders.

On the last day, a workshop was conducted on "Tools and Techniques used in ciliate studies" for undergraduate and postgraduate students. The workshop was co-organized by Zoological Survey of India (ZSI) and ISCB 2018; the workshop facilitators were Dr Renu Gupta, Dr Jasmine Purushothaman, Dr Nageswara Rao Amanchi, Dr Santosh Kumar, Dr Jasbir Singh, Ms S Sripoorna and Ms Jeeva Susan Abraham. Sixty-nine students actively participated in the workshop wherein various bioinformatics tools used for analysing the ciliate biodiversity were taught to the students. The aim of the workshop was to provide networking opportunities for students wishing to take up doctoral or postdoctoral research on ciliate.

During the valedictory, Prof Chandrima Shaha, Vice President (Foreign Affairs), Indian Academy of Sciences, was the Chief Guest. Dr Jaswinder Singh, Principal, SGTB Khalsa College, complimented the organizers for the smooth conduct of the symposium, thanked the foreign protistologists and commended the holistic involvement of the students in the venture. Our special

thanks to the advisors of ISCB 2018 – Dr Alan Warren, Prof Cristina Miceli, Prof GR Sapra and Prof Rup Lal. Financial assistance by Indian and foreign agencies is greatly acknowledged.

NEW DELHI, APRIL 7: The International Symposium on Ciliate Biology 2018 (ISCB 2018) was co-organised by Acharya Narendra Dev College, Maitreyi College and SGTB Khalsa College, University of Delhi in partnership with International Research Coordination Network for Biodiversity of Ciliates (IRCN-BC), an affiliate society of International Society of Protistologists (ISOP).

Dr. Mahesh Sharma, MoS, Ministry of Environment, Forest and Climate Change, graced the inaugural and Professor Chandrima Shaha, Vice President (Foreign Affairs), Indian Academy of Sciences was the chief guest at the Valedictory.

A large contingent of national ciliate biologists was joined by 9 overseas scientists to deliver 20 oral and 57 poster presentations. The specialisations varied from biodiversity to ecology, evolution, role of ciliates in the food web of soil and water, in telomeres, their role as rumen ciliates, bio-indicators of pollution, and in bioremediation among other fields. Use of ciliates as excellent eukaryotic unicellular model systems in science teaching and research was well brought out by all presenters.

A large participation of under-graduate students was a highlight of the symposium. Their enthusiasm in presenting their work and interactions with senior scientists won everyone's heart.

Zoological survey of India (ZSI) came a big way as not only print partners but also in co-organising a workshop "Tools and Techniques used in Ciliate Studies" which was very enthusiastically attended by over 50 participants.

International Symposium on Ciliate Biology

with

International Research Coordination Network for Biodiversity of Ciliates

affiliated society of

International Society of Protistologists

April 04-06, 2018

at

India Habitat Centre, New Delhi, INDIA

Themes: Biodiversity, Ecology, Evolution, Genetics and Epigenetics, Genomics and Meta genomics, proteomics and DNA barcoding, Ciliates and Industry, Ciliates as model organisms in UG teaching and in research, other individual specializations in microbiology

Some of our confirmed international speakers along with Indian Ciliate Biology Fraternity

Alan Warren	Cristina Micali	Antonietta La Terza	Giulio Petroni	Bettina Sonntag	Rosaura Mayén-Estrada	Carlos A Durán-Ramírez	Hamed A Elsedfy	Saleh Al-Farraj	Saleh Alqurashi
London UK	Camerino, Italy		Pisa, Italy	Innsbruck Austria	León Area Mexico			Riyadh Saudi Arabia	

Come join the symposium, as a presenter (oral/ poster), or as a participant, and interact with the best speakers, share and collaborate

Last Date for Registration & Abstract Submission

January 15, 2018

Symposium on "Safety Measures and Laboratory Ethics" (under the aegis of Star College Scheme)

Organizing Faculty Members: Dr Seema Gupta Dr Pooja Bhagat Dr Pankaj Khanna, Dr Ravi Toteja, Dr Seema Makhija Dr Aparna Sharma Dr Sweety Shrimali Dr Anjali Saxena Dr Khangembam Cherita Devi Dr Rahul Dev Dr Vineet Girdharwal

Resourse Person(s) :

Dr Rita Singh,
Dr Mrutyunjay Suar,
Dr Sanjeev Kumar Sharma

Date: February 21-22, 2018

Number of Participants:94

The Departments of Zoology and Chemistry, under the aegis of DBT Star College Scheme, organized a 2-day symposium, 'Safety Measures and Laboratory Ethics' on February 21-22, 2018 in the seminar Hall of the College. A total of 94 participants, including undergraduate students and research scholars from within and outside the College, attended the symposium. Each of the participants of the Seminar was provided with a safety kit containing a safety mask, goggles, cap and gloves. Dr Rita Singh (Professor, Department of Zoology, University of Delhi) was the first invited speaker to deliver a talk at the Symposium. Her talk introduced the participants to the ethical issues involved in performing research on human subjects. The next speaker was Dr Mrutyunjay Suar, Director, School of Biotechnology, KIIT University, Odisha. In his talk Dr Suar discussed laboratory ethics with a medical microbiology perspective. He emphasized the proper disposal measures that need to be followed while discarding microbial waste. In the post-lunch session, Dr Suar delivered an interactive lecture that discussed the journey of science from the initial stages of conception of a scientific idea to its execution on an industrial scale. The last speaker of the day was Dr Sanjeev Kumar Sharma, Senior Manager, Health & Safety, Jubilant Generics Limited. In his talk Dr Sharma discussed with the participants all the safety measures that need to be undertaken while working with potentially hazardous chemicals. On February 22, 2018, the first talk was delivered by Dr Vijay Pal Singh, Deputy Director, FSSAI. Dr Singh discussed the relevance of ethics to science students. Dr. Singh explained the concepts and methodology involved in the ethical use of animals for research. The next speaker was Dr Rup Lal, Professor, Department of Zoology, University of Delhi. In his talk Dr Lal shared with the participants his experiences related to management of a research laboratory. The post-lunch session started with an interactive talk by Dr Gagan Dhawan, Dr Dhawan's talk encompassed the various aspects of safety in a science lab. The next speaker was Dr Sanjukta Subudhi, Scientist, TERI. Dr Subudhi's talk was aimed at introducing the participants to the concept of a zero waste future and the role that scientific research will play towards that goal. The last speaker at the Symposium was Dr. Kamal Gupta, Associate Professor, Deshbandhu College, University of Delhi. In his talk, Dr Gupta discussed the importance of scientific research and the need for higher safety regulations while performing research. The Seminar was concluded with a Vote of Thanks followed by the distribution of certificates to the participants, all of whom interacted actively with the speakers. The participants were enthusiastic about the ideas and concepts presented in the Symposium.

They appreciated the need for a hazard-free and safe work environment and opined that the Seminar had made them realize the importance of ethics in the pursuit of science.

ACHARYA NARENDRA DEV COLLEGE

(UNIVERSITY OF DELHI)
DEPARTMENT OF ZOOLOGY & CHEMISTRY
(UNDER STAR COLLEGE SCHEME, DBT)

Two Day Symposium

on

Safety Measures & Laboratory Ethics

February 21-22, 2018

Patron
Dr. Savithri Singh
Principal

Star College Scheme Coordinator
Dr. Ravi Toteja

Organizing Committee
Dr. Seema Gupta
9811357733
Dr. Seema Makhija
9136563762
Dr. Pooja Bhagat
Dr. Pankaj Khanna
Dr. Sweety Shrimali
Dr. Aparna Sharma
Dr. Anjali Saxena
Dr. Pragati Mailk
Dr. K Cherita Devi

Highlights

- Biosafety management
- Risk assessment
- Work practices and safety equipment
- Handling hazardous chemicals
- Relevance of ethics to science students

Benefits

- The participants will be able to list and understand the parts of biosafety plan.
- To learn healthy & good laboratory practices.
- To develop proper waste management in the laboratory.
- Workshop Kit Material
- Certificate of Participation

For Registration:
Visit http://andcollege.du.ac.in
UG Students : Rs 200/-
Research Scholars: Rs 1000/-
Faculty: Rs 1500/-

Last Date for Registration: Feb 18, .2018

First 75 student registrations will be given free Safety Kit

Eminent Speakers

Dr. H.V. Murugkar
(Principal Scientist, Society for Biosafety)

Prof. Rup Lal
(University of Delhi)

Dr. Mryuntanjay Suar
(ASM Ambassador, India Ocean Region)

Dr. Vijay Pal Singh
(Deputy Director, FSSAI)

Dr. Sanjeev Kumar Sharma
(Senior Manager, Health & Safety, Jubilant Generics Ltd)

Dr. Sanjukta Subudhi
(Scientist, TERI)

Dr. Gagan Dhawan
(ANDC, University of Delhi)

Number of Participants: 79

A hands-on training workshop, 'PCR & Southern Blotting', was held on September 26, 2017. The workshop received enthusiastic participation from the students who appreciated the experience of setting up their own experiments using PCR and Southern Blotting, two techniques which are at the core of all scientific research in Biology. The Workshop received enthusiastic participation from the students of Life Science, Chemistry (H) and Physics (H) who appreciated the experience of setting up their own experiments using PCR and Southern Blotting, two techniques which are at the core of all scientific research in biology.

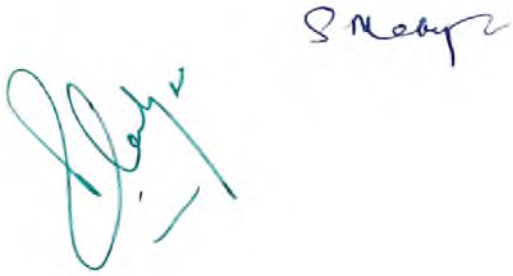
'Anxiety at Workplace'

Organizing team: Dr Ravi Toteja Dr Seema Makhija (Department of Zoology)
Date: 25th August, 2017
Resource Person : Dr. S.A. Basir,
Number of Participants: 41



Workshop on "Anxiety at Workplace" Department, of Zoology organized a workshop entitled, 'Anxiety at Workplace' on August 25, 2017 at 1:00 p.m. in the Conference Hall. The Workshop was conducted by noted psychiatrist Dr S.A. Basir. In the Workshop, Dr Basir provided the participants an insight into the field of anxiety management. He started the Workshop by identifying the major causes of anxiety, particularly those which are prevalent at the Workplace. He then revealed that workplace related anxiety is escalating at an alarming rate and that 1 out of every 4 persons is suffering from an anxiety-related disorder. He concluded the workshop by discussing the small changes that each person can make in their lifestyles to lead a life devoid of stress and anxiety. The Workshop was attended by 41 participants. The participants of the Workshop participated enthusiastically in the discussions and felt that the Workshop had equipped them to handle anxiety with a much more logical and scientific approach.

SEMINARS

Title: Awareness on IPR and Social Insects Importance of IPR and its Protection
Organizing team: Faculty Members of Zoology Department
Resource Person: Dr. Rekha Chaturvedi, Ms. Amanpreet Kaur, Mr. R. Saha
Date: September 05, 2017
Number of Participants: 76

Department of Zoology organized one day seminar on "IPR awareness & social insects on September 5, 2017, under the aegis of MHRD IPR Chair and DBT Star College Scheme. The schedule of the workshop was as follows:

Title of the Talk	Speaker
Importance of IPR and its Protection	Mr. R. Saha (Advisor CII & Former Director PFC, TIFAC, DST)
Patent, Patenting Procedure & Patent Search	Dr. Rekha Chaturvedi (IPR Chair Professor, DU)
Industrial Design & its Registration	Ms. Amanpreet Kaur (Project Assistant under IPR Chair)
Copyright	Dr. Rekha Chaturvedi (IPR Chair Professor, DU)
The Wonder World of Social Insects	Dr. Debjani De (Principal Scientist, Division of Entomology, IARI, Pusa)

In today's globalizing knowledge based economy, protecting Intellectual Property Rights (IPR) is very important. Therefore, the effective application of IPR in the creation, implementation & development in the field of education is critical. Apart from the realizing the importance of IPR on one hand, to attain more understanding on the behavior of social insects is equally important.
There was huge number of participants from all the Departments of the college. The program included two technical sessions. First session was focussed on "IPR awareness", that included discussions & importance of IPRs and their protection, Patenting procedures, searches, patentable and non-patentable inventions, copyright protection, issues of do's and don'ts in the context. The workshop was co-ordinated by Dr. Seema Makhija.

First Technical Session

Mr R. Saha, advisor CII is a master degree holder in aeronautical engineering from Cranfield University, England. He served the Govt. of India for 35 years in different capacities and handling responsibilities including technical evaluation & assessment, research, public policy matters. In the

last 15 years, he spearheaded the national efforts in capacity building by creating IPR awareness in India, through workshops, publishing a monthly magazine, writing articles, starting DU's IPR cell and helping academic institutions in designing their IPR policies. He evolved an innovative system for protecting university inventions & other original IP ensuring active participations of inventor's attorneys. He represented India in various international forums & was involved in negotiating international agreements in the scientific research and development.

Mr R. Saha, advisor CII, was keynote speaker for the session. He highlighted the importance of IPR & protection very nicely with practical examples. This created enthusiasm among the participants.

Dr. Rekha Chaturvedi, IPR Chair Professor (technical), DU: Dr. Rekha Chaturvedi, a Scientist by training, is an experienced professional in the field of Intellectual Property Management with 14 years of IP and 30 years of R&D experience. Dr Chaturvedi earned her doctorate from University of Oslo, Norway. Dr Chaturvedi has undertaken extensive training in IPR issues in India and abroad. Besides intensive training programs organized by CSIR, DST and DBT, CII and FICCI, she has undergone internships at NIH, USA, AOTS and JPO (Japan). She has put in 24 years of service with CSIR (Institute of Genomics and Integrative Biology, and National Botanical Research Institute) as Chief Scientist, Head of IPR and Planning cells and established and managed a vibrant IPR cell. She is a well-experienced professional in IP protection and management. During her career with CSIR-IGIB, she has authored several research and review articles and guided several PhD and Masters students for their theses work and trained many students in IPR who interned under her guidance. She has delivered talks in many workshops and training programs on patenting, ethics, and research planning and other IPR and WTO issues. She is also a registered Patent Agent with the Indian Patent Office and has long experience of handling Biotech, Pharma and New Chemical entity patents. She is also experienced in copyright, trademark and design registrations. Her key skills are imparting IP education, Planning & Policy, IP management including IP analysis and IP licensing. Dr Rekha Chaturvedi joined DU as the IPR Chair Professor (Technical). In her talk she illustrated the importance of IPR in the course of study and research. She delivered two talks on Patent procedures, searches and on Copyrights respectively. She emphasized on the trends of patent filing in India and abroad and cited success stories on capitalizing of IP.

Ms. Amanpreet Kaur, Research Assistant under IPR Chair, delivered a talk on Industrial designs and registration.

Second Technical Session

The second Technical session was dedicated to "Wonder world of Social Insects" by Dr Debjani Dey, Principal Scientist, IARI. Currently working as a Principal Scientist in the Biosystematic Section of the Division of Entomology, IARI and involved in biosystematics research and teaching for the past 25 years. She has been trained in insect taxonomy with Commonwealth funding at The International Institute of Entomology, London and British Museum of Natural History, London. Incharge of the 110-year-old National Pusa Collection she is involved in maintenance and curation of nearly 0.9 million insect specimens many of which are more than 100 year old. Currently she is Principal Investigator of the IARI Institute Taxonomy project, "Biosystematics of insects, fungi, bacteria and nematodes of economic importance" and also Principal Investigator of the "ICAR

Network project on insect biosystematics". Till date she has published more than 90 research papers, authored 30 book chapters, one book and has delivered more than 30 invited lectures on various aspects of Taxonomy / Hymenoptera in various training programmes talked about the behaviour of social insects in depth. The session was appreciated by the students.

The seminar was a huge success...!!

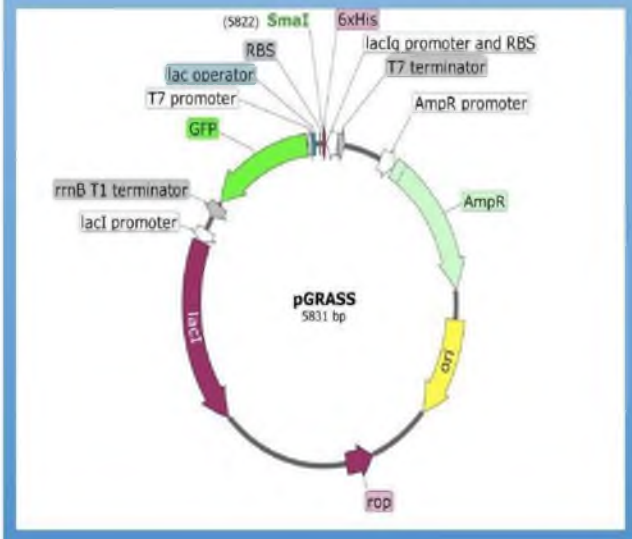
DEPARTMENT OF BIOMEDICAL SCIENCE

Conferences/Workshops/Seminars for the year 2021-22

DEPARTMENT OF BIOMEDICAL SCIENCE

Event:Webinar on "Designing of a Novel Vector for Rapid One-Step Cloning and Expression in *E. Coli*"



DATE: JANUARY 28, 2022

The Department of Biomedical Science, Acharya Narendra Dev College (ANDC), University of Delhi under the aegis of DBT-STAR College scheme organized a webinar on the topic "Designing of a Novel Vector for Rapid One-Step Cloning and Expression in E. Coli". Mr. Shinto James, Research Scholar, IISER, Bhopal was the resource person. The talk was on the introduction of a novel selection strategy for the insertion of protein coding genes in vector backbones via an engineered plasmid pGRASS (GFP reporter from anti-sense promoter- based screening system). The webinar initiated with introduction to vectors in molecular biology and their development. Later, the audience was introduced to the novel pGRASS vector along withits applications in transformation and cloning practices. The webinar was held under the patronage of Prof. Ravi Toteja, Officiating Principal, ANDC. The convenor for the event was Prof. Urmi Bajpai and the faculty coordinator were Dr. Archna Pandey and Dr. Sunita Jetly. Mr. Pulkit Singh, B.Sc (H) Zoology, Sem VI was the student coordinator.

DEPARTMENT OF BIOMEDICAL SCIENCE
ACHARYA NARENDRA DEV COLLEGE
(University of Delhi, New Delhi)
(Under the Aegis of DBT-STAR College Scheme)

Presents

Designing of a novel vector for rapid one-step cloning in *E. coli*

- Development of an *E. coli* vector pGRASS, based on a novel genetic design for selection and expression

- Easier and more convenient screening of recombinants based on GFP fluorescence

SHINTO JAMES
Research Scholar,
Prof Vikas Jain Lab
IISER, Bhopal

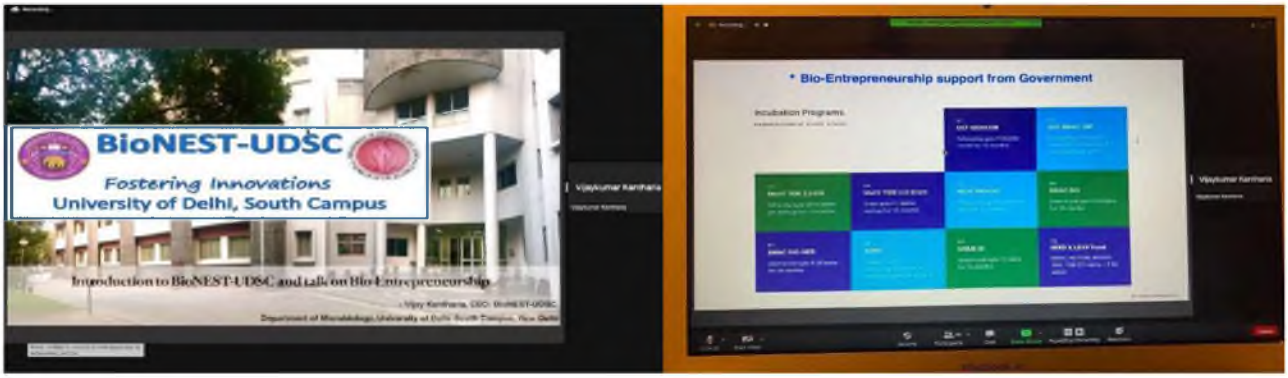
EVENT: NATIONAL WEBINAR ON "INTRODUCTION TO BIONEST-UDSC & BIO-ENTREPRENEURSHIP" DATE: FEBRUARY 15, 2022



The Department of Biomedical Science, Acharya Narendra Dev College (ANDC), University of Delhi under the aegis of DBT-STAR College scheme organized a webinar on the topic "Introduction to BioNEST-UDSC & Bio-Entrepreneurship". Mr. Vijay Kantharia, CEO, BioNEST, University of Delhi, South Campus was the resource person. The talk was on the introduction of a BioNEST Facility operating at the department of Microbiology, South Campus, University of Delhi. It provides infrastructural support, mentorship, and space to startups in facilitating their R&D work. Besides, several high-end equipment are available. Mr. VijayKantharia, CEO BioNEST explained the prospects of Bio Entrepreneurship and the available facilities that can be used for the respective requirements of researchers and faculty members. The webinar was held under the patronage of Prof. Ravi Toteja, Officiating Principal, ANDC. The convenor for the event was Prof. Urmi Bajpai. Ms Ritu Arora, PhD Scholar, Department of Biomedical Science, ANDC was the student coordinator.

Event: Workshop on "Tools in Modern Biology"

Date: April 21, 2022

Hands-on Training on Tools in Modern Biology was organized for the support staff to familiarize them with the new equipment purchased under the STAR Scheme on 21st April, 2020. The laboratory staff were trained about the basic operation and maintenance of pH meter, PCR and electrophoresis unit. The training was attended by 10 staff members.

Event: Cathexis-22: Kitchen is your health tool
Date: April 22, 2022

The Department of Biomedical Science, Acharya Narendra Dev College organized its annual festival, Cathexis'22, on April 22, 2022 in the seminar hall of the college. Ms. Anuja Aggarwal, Senior Dietitian, AIIMS delivered a talk on the topic "Kitchen is your health tool". During the event, the editorial Society of the department also released its annual magazine, Biomer'22 'Kitchen is our health tool'.The undergraduate students from the department enthusiastically participated in various activities held viz. Heads up, Murder Mystery, Quiz-O-Mania and Whisperchallenge.

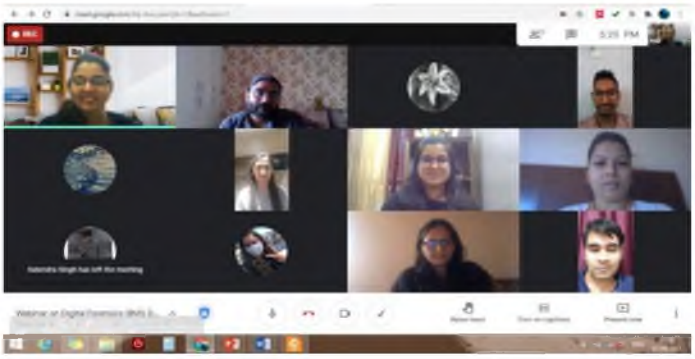
Event: 'Introduction to digital forensics and electronic evidences'



Date: April 21, 2022

Department of Biomedical Science, Acharya Narendra Dev College, University of Delhi underthe patronage of Prof. Ravi Toteja (Officiating Principal, ANDC) organized a webinar on thetopic "Introduction to Digital Forensics and Electronic Evidences" under the aegis of DBT-STARCollege Scheme on 3rd April 2021 on google meet. The organizing team comprised of theconvenors - Dr Archna Pandey (Department of Biomedical Science) and Dr Ritu Khosla(Department of Biomedical Science). The resource person for the webinar was Dr. Mohit Soni,CEO WhiteLintGlobal Pvt Ltd. and Associate Professor, Lovely Professional University, Punjab.The webinar was attended by over 50 participants. The webinar was an introductory lecturedelving into the various aspects of digital forensics. Dr Soni discussed several types ofcomputer crime investigation scenarios and the eventual processing of different electronicevidence collected from them. This session took the participants through all classes of digitalforensics. It also threw light on different career options in digital forensics as well as forensic sciences in general.

EVENT: SCIENCE SETU ON "VIRUSES & IMMUNITY"DATE: MARCH 17, 2021

Acharya Narendra Dev College, University of Delhi along with Translational Health Science andTechnology Institute, Department of Biotechnology, Ministry of Science and Technology, Govt. of India organized a Science Setu Program on March 17,2021. This year Virtual Science Setu event was organized on "Viruses & Immunity".
The following scientists from THSTI gave a talk on the theme: Dr Milan Surjit: Virology: Importance in human health management, scope & prospects; Dr. Sweety Samal: VaccineDevelopment For Respiratory Viruses:Past & Future Complexity Of; Dr. Amit Awasthi: Immuneresponse In Covid 19 & Flow Cytometric Approach To Understanding Disease Biology.
The event was attended by 79 participants.

(Prof. Urmi Bajpai)

Event: IBRC-Phage Directory webinar series on Phage Bioinformatics: Phage genome annotation: the right way and/or the easy way

Date: March 02, 2021

With an aim to develop a community of bacteriophage researchers, 'International Bacteriophage Research Consortium' (IBRC) was established as a collaboration between Acharya Narendra Dev College (Dr Urmi Bajpai is the co-founder) with Open Source Health Laboratory (OHSL), USA in 2018. A webinar was organized on 2nd March, 2021 under IBRC-Phage Directory webinar series on the topic "Phage genome annotation: the right way and/or the easy way". Katelyn McNair, Research Scholar, University of California, USA was the resource person. The webinar was attended by 59 participants.

Event: BRC-Phage Directory webinar series on 'Phage Bioinformatics: Phage genome annotation pipelines in CPT Galaxy and WebApollo'

Date: April 07, 2021

With an aim to develop a community of bacteriophage researchers, 'International BacteriophageResearch Consortium' (IBRC) was established as a collaboration between Acharya Narendra Dev College (Dr Urmi Bajpai is the co-founder) with Open Source Health Laboratory (OHSL), USA in 2018. A webinar was organized on 7th April, 2021 under IBRC-Phage Directory webinarseries on the topic "Phage Bioinformatics: Phage genome annotation pipelines in CPT Galaxy and WebApollo". Dr. Jason Gill, Department of Animal Science, Texas A&M University, USA was the resource person. The webinar was attended by 63 participants.

Dr. Jason Gill
Phage genome annotation pipelines in CPT Galaxy and WebApollo
Dr. Jason Gill: Associate Professor, Department of Animal Science, Associate Director, Center for Phage Technology (CPT), Texas A&M University. Holds joint appointment with the Faculty of Genetics & the Department of Microbial Pathogenesis and Immunology in the College of Medicine. Current chair of Division M of the American Society for Microbiology.
Research focus: phage genomics, basic phage biology, and the applications of phages in real-world settings against bacterial pathogens including E. coli Salmonella, S. aureus, K. pneumoniae, and A.baumannii

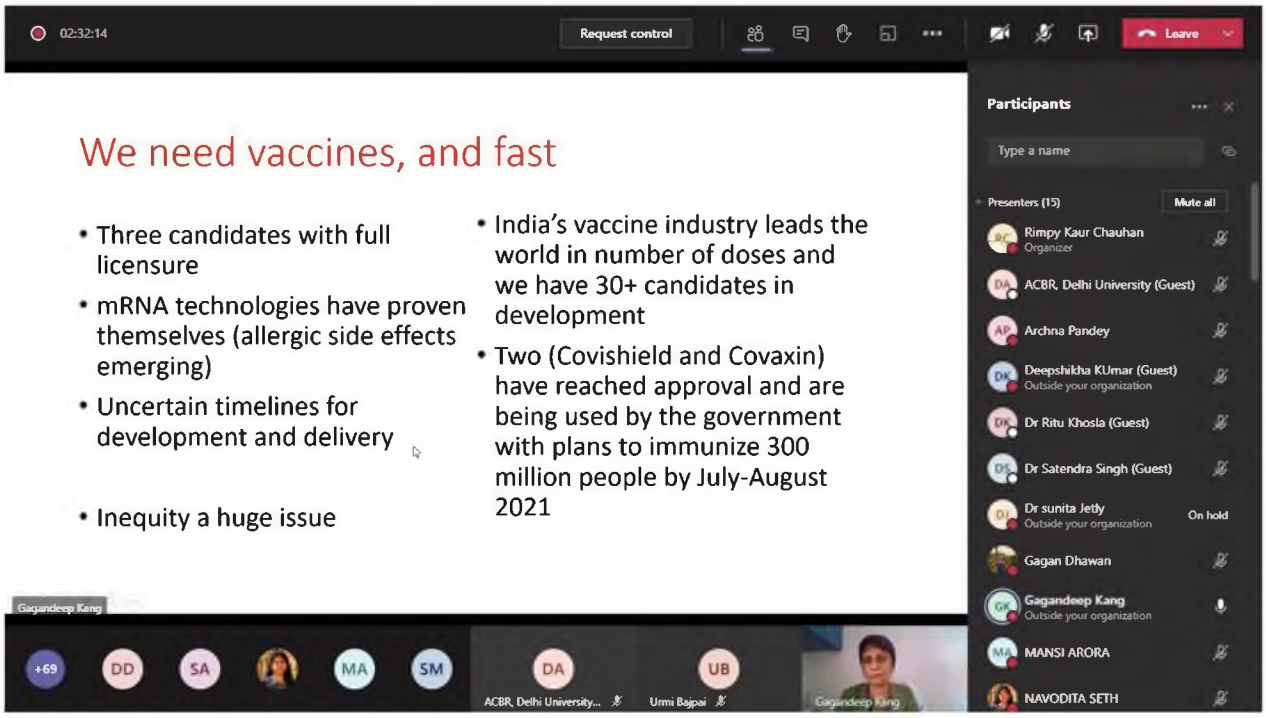
Event: Covid-19 vaccines: From bench to bedside; amidst a pandemic
Date: January 21, 2021



Department organized its annual festival, Cathexis'21, in the online mode on January 21, 2021. Prof. Daman Saluja (Director, B. R. Ambedkar Center For Biomedical Research and Joint Director, Delhi School of Public Health, University of Delhi) and Prof. Gagandeep Kang (Wellcome Trust Research Laboratory Division of Gastrointestinal Sciences, Christian Medical College, Vellore) were the distinguished guest speakers. The topic of Prof. Saluja's talk was: 'Lessons learned around the pandemic' and discussed all the ways we, as a country, society and individual have evolved post-Covid-19 to face such pandemics in the future. Prof. Kang gave a short talk which summarized the different types of vaccines being developed against SARS-CoV-2, and explained their working mechanism and limitations. During the event, the editorial Society of the department also released its annual magazine, Biomer'21 'Covid19 vaccines: From bench to bedside; amidst a pandemic'.

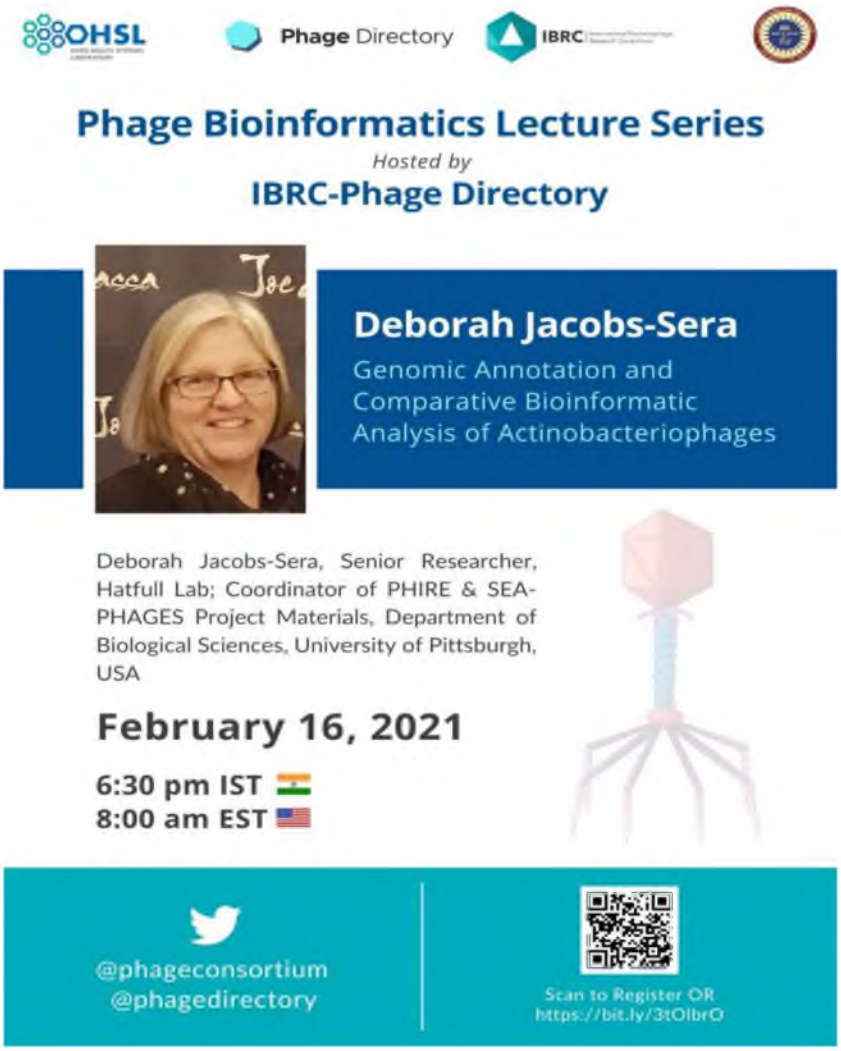
IBRC Webinar_27th January 2021



IBRC: Prof Paul Turner, Rachel Carson Professor of Ecology & Evolutionary Biology & Microbiology, Yale University; Faculty member at Yale School of Medicine, USA on "Challenges in commercially developing phage therapy to target drug-resistant bacteria." 27 January, 2021.

EVENT: IBRC-PHAGE DIRECTORY WEBINAR SERIES ON PHAGE BIOINFORMATICS: GENOMIC ANNOTATION AND COMPARATIVE BIOINFORMATIC ANALYSIS OF ACTINOBACTERIOPHAGES

Date: February 16, 2021

With an aim to develop a community of bacteriophage researchers, 'International Bacteriophage
Research Consortium' (IBRC) was established as a collaboration between Acharya Narendra
Dev College (Dr Urmi Bajpai is the co-founder) with Open Source Health Laboratory (OHSL), USA in 2018. A webinar was organized on 16th February, 2021 under IBRC-Phage Directory webinar series on the topic "Genomic annotation and comparative bioinformatic analysis of actinobacteriophages". Dr. Deborah Jacobs-Sera,

Department of Biological Sciences, University of Pittsburgh, USA was the resource person. The webinar was attended by 60 participants.

IBRC Mycobacteriophages: Diversity, Dynamics and Therapy (17 Jun, 2020)

Dr Urmi Bajpai

In collaboration with International Bacteriophage Research Consortium, ANDC organised a lecture on "**Diversity, Dynamics and Therapy of Mycobacteriophages**". The presenter of the lecture was Prof. Graham Hatfull, Eberly Family Professor of Biotechnology and HHMI, Professor in the Department of Biological Sciences at the University of Pittsburgh, USA. The lecture was attended by 67 participants.

EVENT: SOCIETY FOR BACTERIOPHAGE RESEARCH AND THERAPY (SBRT): PHAGE DIRECTORY:MAKING THE WORLD'S PHAGES MORE ACCESSIBLE, MANAGEABLE AND SHAREABLE.

Date: September 03, 2020

With an aim to develop a community of bacteriophage researchers, 'International Bacteriophage Research Consortium' (IBRC) was established as a collaboration between Acharya NarendraDev College (Dr Urmi Bajpai is the co-founder) with Open Source Health Laboratory (OHSL), USA in 2018. A webinar was organized on 3rd September, 2020 under IBRC-Phage Directory webinar series on the topic "Phage Directory: Making the world's phages more accessible, manageable and shareable". Dr Jessica Sacher and Mr Jan Jhang, Co-Founders, Phage Directory USA were the resource persons. The webinar was attended by 69 participants.

No. of participants: 69

Directory: Making the world's phages more accessible, manageable and shareable". 3 September2020.

Event: Workshop on "Python coding workshop for biologists"

Date: November 20, 2020

A python-based programming online workshop was conducted by the Biomedical Science Department alumni, Ms Shruti Gupta and Mr Alok Anand, pursuing PhD from School of Computational & Integrative Science, Jawaharlal Nehru University. The workshop, designed as a 20 hour tutorial, was conducted on weekends in November 2020 and was attended by 14 students from the B.Sc (H) Biomedical Science, IIIrd year with keen interest in computer programming. The workshop was organized by faculties of Biomedical Science department- Prof Urmi Bajpai (convenor) and Dr Rimpy Kaur Chowhan. Data analysis and programming skills are at the core of any research area, and with the vast data generated in biological research, learning a programming language has become a necessity. The workshop taught the fundamental concepts of computer programming and ways to develop algorithmic approach to solve problems. Study material and assignments were given to participants with

writing complete programs solve problems related to introductory molecular biology and tophysical science.

Total no. of participants: 14

EVENT: SOCIETY FOR BACTERIOPHAGE RESEARCH AND THERAPY (SBRT): KNOWING THE UNKNOWN: APPROACHES TO CHARACTERIZE THE UNCHARACTERIZED PROTEOME OF BACTERIOPHAGES

Date: October 01, 2020

Prof. Urmi Bajpai, co-founder, International Bacteriophage Research Consortium and faculty, Department of Biomedical Science, Acharya Narendra Dev College organized a webinar on the topic "Knowing the unknown: Approaches to characterize the uncharacterized proteome of bacteriophages" in collaboration with Society for Bacteriophage Research and Therapy. The event was held on 1st October, 2020. Prof. B.N. Tripathi, Deputy Director General, Animal Science, ICAR Headquarters, New Delhi and Dr. Julianne H. Grose, Associate Professor, Birgham Young University Provo, Utah, USA were the resource persons. The webinar was attended by 65 participants.

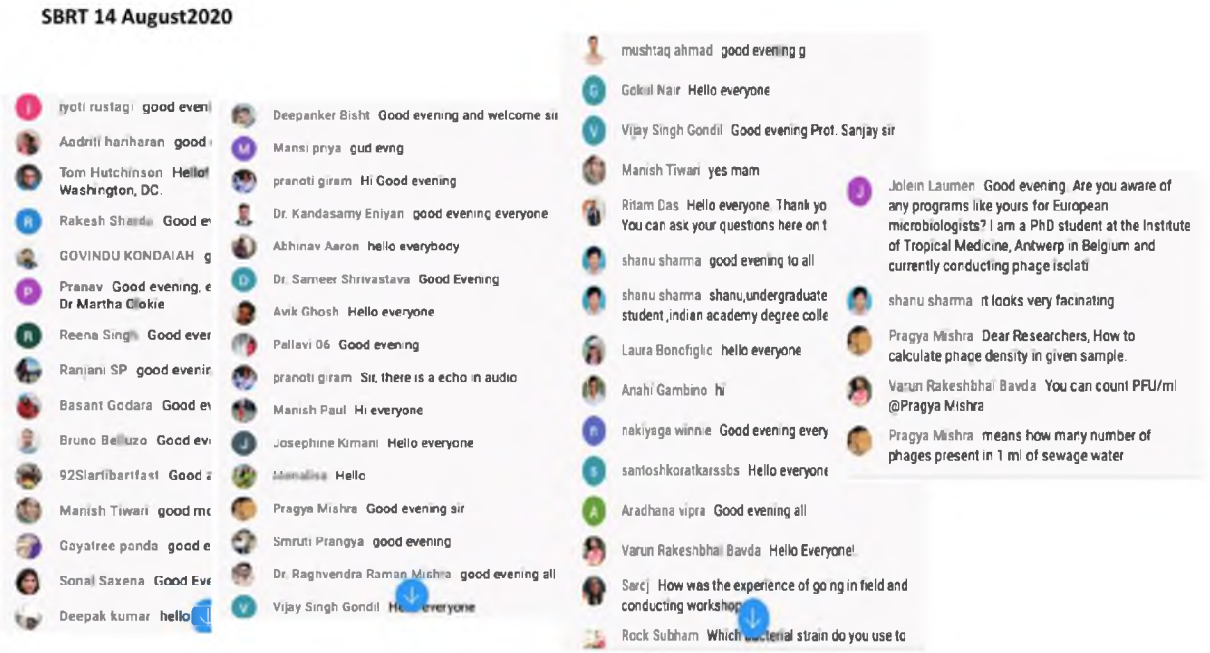
USING PHAGES TO COMBAT AMR: SCIENTIFIC CAPACITY BUILDING THROUGH LABORATORY TRAINING WORKSHOPS (14-AUG-20)



Dr Urmi Bajpai

In collaboration with Society for Bacteriophage Research and Therapy, ANDC organised a webinar on "Using phages to combat AMR: Scientific capacity building through laboratorytraining workshops". The keynote speakers in the webinar were Dr Tobi Nagel, Founder & President of Phages for Global Health, USA, Prof. Martha Clokie, Professor of Microbiology, University of Leicester, UK and Dr. Janet Nale, Research Associate, Department of Infection, Immunity and Inflammation, University of Leicester, UK. The webinar was attended by 63 participants.

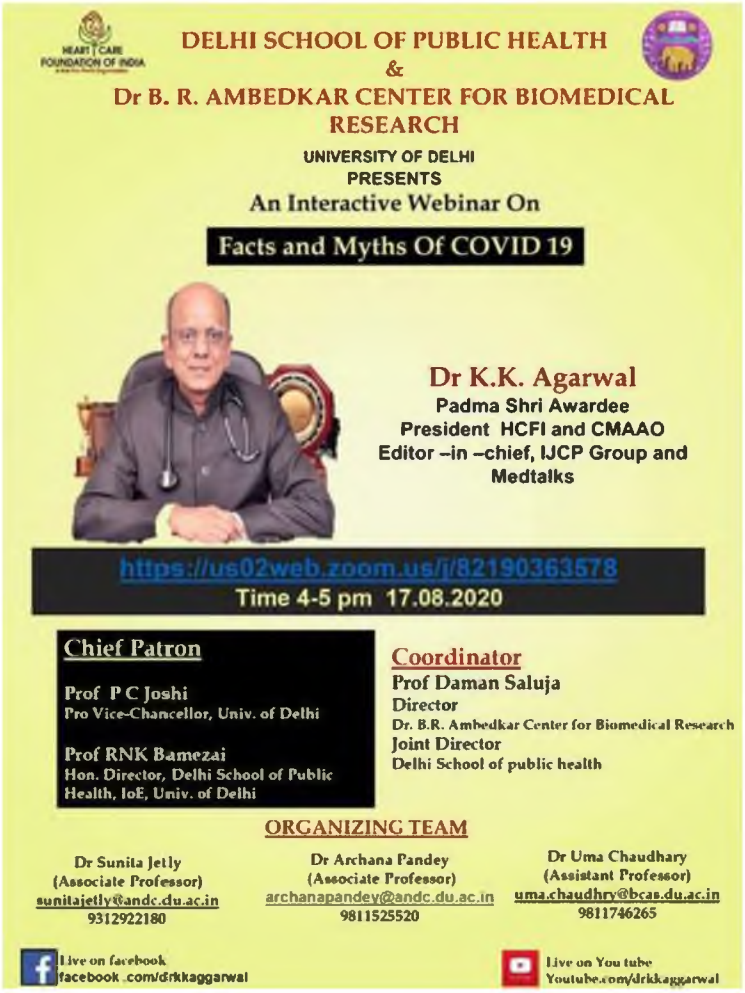
Event: Facts and Myths of COVID-



19Date: August 17, 2020

The Department of Biomedical Science, Acharya Narendra Dev College (ANDC) and Delhi School of Public health jointly organized an online interactive webinar on "Facts and Myths of

COVID-19". Padma Shri Awardee, Dr. K.K. Agarwal, President, HCFI and CMAAO, Editor-in-

chief, IJCP Group and Medtalks was the distinguished guest speaker. He talked about the various myths about COVID 19 and clearly explained the facts to break those myths. The event was organized under the patronage of Prof. P.C. Joshi, Pro-Vice-Chancellor, University of Delhi and Prof. R.N.K. Bamezai, Hon. Director, Delhi School of Public Health (DSPH), IoE, University of Delhi. Prof. Daman Saluja, Director, Dr. B. R. Ambedkar Center for Biomedical Research and

Joint Director, DSPH was the coordinator for the event. The event was very well organized under the able guidance of Dr. Sunita Jetly and Dr. Archna Pandey from ANDC and Dr. Uma Chaudhary from Bhaskaracharya College of Applied Sciences.

Total no. of participants: 67

From discovery to high-throughput engineering of phage lysins targeting Gram-negative bacteria (09 Jul, 2020)

Dr Urmi Bajpai

In collaboration with International Bacteriophage Research Consortium, ANDC organised a IBRC-Phage Directory webinar series on Phage Bioinformatics titled "From discovery to high-throughput engineering of phage lysins targeting Gram-negative bacteria". The presenter of the lecture was Prof. Yves Briers, Associate Professor, Department of Biotechnology, Ghent University, Belgium. The lecture was attended by 57 participants.

Presents lecture by

Professor Yves Briers

From discovery to high-throughput engineering of phage lysins targeting Gram-negative bacteria

Prof. Yves Briers is Associate Professor at the Laboratory of Applied Biotechnology at Ghent University, Belgium. His research focus is on synthetic biology of modular proteins with a keen interest in bacteriophage-encoded lysins for biocontrol of multi-drug resistant pathogens. Recently, they have developed an ingenious platform that gives turbo boost to the development of new antibiotics.

Event: Workshop on foldoscope

Date: February 02, 2019

The Department of Biomedical Science, Acharya Narendra Dev College organized a one day workshop on 'FOLDSCOPE', under the aegis of DBT-STAR college scheme. The event took place in the seminar hall of AND college on Saturday 2 February 2019. The workshop was inaugurated by Dr. Sunita Jetly, HOD, Biomedical Science department. She welcomed the participants and anticipated the role of foldscope in the coming time could play an important rolein day to day life work as well as scientific research. Dr. Uma Choudhary, BMS, BCAS, University of Delhi delivered a talk about the need and importance of foldscope for field microbiologist, veterinarians, and researchers posted in remote areas. She also explained about the novel approach of foldscope since it combines the internet of cell phone and the paper microscope that can be carried in a pocket. The aim of this workshop was to identify learning

points regarding handling and implication of foldscope. Foldscope can also magnify several

folds of these young minds' curiosity and ignite their creativity and imagination. Further, the workshop has sparked the interest of these graduate students so that they continue to observe surroundings and try to question wonderful things within our amazing world. The organizing team was grateful to Dr. Ravi Toteja, Acting Principal for his constant support, enthusiasm and making this workshop flow smoothly and also acknowledged the non- teaching staff from AND college, volunteers from Acharya Narendra Dev college and Bhaskaracharya college of Applied Sciences for their efforts and contribution.

Total no. of participants: 40

(Under the Aegis of DBT-STAR College Scheme)

Presents

BMS 'Alumni' Lecture Series

by

Dr. Pawan Mehrotra
Batch: (BMS: 2002-2005)
Founder, Aarna Biomedical Products

Transition from a "Cancer Researcher" to an "Engineer" and finally a "Manufacturer-Salesman"

Dr. Mehrotra's team has successfully developed & launched their nascent social enterprise's first two products – Sampoorti and Poorti, which aims at post-surgical rehabilitation of breast cancer patients supported by BIRAC, Tata Trusts, IIT-Kanpur and Translational Health Science and Technology Institute – DBT. He has the unique experience of having publications, patents and products to his credit in the field of oncology.

Date & Time: August 14, 2019, 10:00 AM onwards; Venue: Seminar Hall

DEPARTMENT OF BIOMEDICAL SCIENCE

Cathexis'18 Inaugural lecture: 25 Oct, 2018

Department of Biomedical Science, Acharya Narendra Dev College, students society 'CATHEXIS', organized an inaugural lecture on **"e-Health: Exploring its potential for Healthcare Delivery"** on 25th October 2018 in the Conference Hall at 11:00 am. Professor RajivJanardhanan, Director, Amity Institute of Public Health and Professor Priya Ranjan, Amity School of Engineering and Technology, Noida, Utter Pradesh delivered the keynote lectures. Thelecture was attended by 56 participants including students from various departments of the college along with many faculty members. The speakers gave a very informative talk on digital data gathering and analysis of various health disorders. They showed various methods of digital data collection. Student interacted with speakers very enthusiastically and speakers gave answersof their query in very friendly manner. At the end of lecture, speakers and students gathered for agroup photographs in the college front lawn followed by a lunch in the committee room. The lecture was highly appreciated by all the participants.

DEPARTMENT OF COMPUTER SCIENCE

Conferences/Workshops/Seminars for the year 2021-22

REPORT

Acharya Narendra Dev College is an educational and research oriented hub of

eminence of India under University of Delhi. It envisage proffering quality education to its students while emboldening them with diverse exposure and hands-on research. We adhere to the ideology of 'preparing for the future' by exploring and innovating 'beyond the classroom'.

Under the FOSS and the aegis of DBT Star College Scheme of Computer Science Department, organized a Two Day online workshop on *Effective Presentation and Image Management for Success*. This workshop was organized on 24 -25 August 2021 for the students of Computer Science.

Mrinal Gupta Virmani, Confidence Coach & Softskills Trainer, Image Consultant & Chartered Accountant, was the resource person of the workshop. This workshop was organized to familiarize the students with the effective ways to give better presentation and to enhance and upgrade self image through image management. The day wise session details are described in the following:

Day 1: "Effective Presentation" covered the topics such as: Presentation preparation (Research your audience and check the settings/technology. Structuring the presentation in opening, body, and the closing. Making power point slides). Delivery of Presentation (Verbal Delivery, voice modulation, body Language - eye contact, appear confident, face the audience not the screen). The art of storytelling etc. During the session there were few activities like tongue twisters, voice modulation, good presentation vs. bad preparation, in which most of the students participated actively. A video was also presented on body language for presentations.

Day 2: "Image Management" covered the topics such as: Why is having an image important? How to improve self image? The ABC...D of image management(Appearance, Behaviour, Communication, and Digital Foot-Print) . What is perfect handshake? Self-Introduction, mobile etiquette, enhance your communication skills. Image quotient test was conducted consisting of 16 questions. How to dress for virtual interviews.

On the second day Prof. Ravi Toteja, esteemed Principal of the college, appreciated the efforts put in by the organizers and the resource person for successful completion of the workshop.

Principal sir also expressed his desire to conduct such events in future in the offline mode, so that maximum number of students of the college can get the benefit from such type of workshops.

At the end Senior Faculty, Dr. Sharanjit Kaur delivered a vote of thanks. The enthusiasm and passion of the students was commendable all through the workshop. Participants were interactive and showed keen interest in the workshop. The workshop was a great success.

REPORT

FOSS Club, Department of Computer Science in collaboration with Internal Quality Assurance Cell, Acharya Narendra Dev College under the aegis of DBT Star College Scheme 2021-22 are organised **Two Days online Workshop on the topic of "Front-End Web UI Frameworks Overview: Bootstrap" on** October 01, 2021 to October 02, 2021 at 10:00 AM - 01:30 PM on Microsoft Teams. The workshop was convened by Ms. Anu Preveen. It was attended by faculty, students, and non-teaching staff of our college. We had Mr. Ashwani Bhatia as our eminent guest speaker. He is working as a Web Designer/ Developer. In this Faculty Development Program, the participants got to know about the importance of Bootstrap. It emphasized on front-end framework used to create modern websites and web apps.

DAY 1: The Day one concentrated on the responsive web designing and viewport portability. He discussed how to divide the content section into different parts by adding viewport compatible options and bootstrap inbuilt classes and how we can create catchy header and footers.

DAY 2: The Day two concentrated on how to create attractive carousels for the home page. It also develops the understanding of color coding concepts and constraints of flexible display and vertical content manipulation. He also discussed how we can add navigation bars, Modals, Absolute-Fixed scrollable backgrounds, accordion, Cards, Toast notification, pop-overs and tool- tips.

Overall, the workshop was aimed at enhancing the professional skill set of participants. The Session was very interactive as the participants were given at the end an assignment test.

At the end of the program, participants were awarded with the E-certificates. Session ended with the vote of thanks by Teacher-In-Charge, Dr. Sunita Narang. The workshop proved to be extremely informative and was a great success with participation of around 50 students and 30 teaching, and Non-Teaching staff from our college.

REPORT

FOSS Club, Department of Computer Science in collaboration with Internal Quality Assurance Cell, Acharya Narendra Dev College under the aegis of DBT Star College Scheme 2021-22 are organised Two Days online Workshop on the topic of "HTML: A Prerequisite for MERN Stack" by students on October 06, 2021 to October 07, 2021 at 3:00 PM - 05:00 PM on Microsoft Teams. The workshop was convened by Dr. Sunita Narang. It was attended by students of our college. We had Mr. Rishi Sarbobhoum, Mr. Aditya Goel, Mr. Devesh Yadav and Mr. Sushant Sharma as our guest speakers. They are the students of Computer Science Department. In this Workshop, the participants got to know about the importance of Hyper Text Markup Language.

DAY 1: Mr. Rishi Sarbobhoum discussed the introduction of HTML, its tags, elements and formatting functions. After one hour session, Mr. Aditya Goel discussed how users can create forms using HTML. He also discussed forms related attributes and its functions.

DAY 2: Mr. Devesh Yadav concentrated on how users can create Tables and Lists using HTML in Web Application. After one hour session Mr. Sushant Sharma discussed importance of cascading style Sheets and how users can use CSS functions in HTML. He also discussed the Frames, its Types and where it is used.

The Workshop was aimed at enhancing the professional skill set of participants. The Session was very interactive as the participants were given at the end a Quiz test. At the end of the program, participants were awarded with the E-certificates. Session ended with the vote of thanks by Ms. Vandita Grover. The workshop proved to be extremely informative and was a great success with participation of around 100 students from our college.

REPORT

Turing Society of Department of Computer Science of the Acharya Narendra Dev College under the aegis of DBT Star College Scheme 2021-22 organized a 6 day online workshop titled "A First Step Towards Developing Virtual Lab Using MERN Stack" from 9th-24th October 2021 (on Weekends). This workshop was planned to train the students in creating Virtual Labs. Virtual Labs is an initiative by the Ministry of Education in collaboration with the IITs. Acharya Narendra Dev College is now a nodal center for setting up Virtual Labs and is committed to train students and faculty as an outreach activity for Virtual Labs. This workshop was convened by **Prof. Vibha Gaur** along with Co-Convener **Ms. Vandita Grover.** The workshop was attended by the students and faculty members of Acharya Narendra Dev College. Mr. Prabhat Chandra a Freelance Trainer (since 9 years) and also a Software Developer for the past 16 years was the resource person for this workshop.

The session started with the encouraging words of the respected Officiating Principal; Prof Ravi Toteja. Prof Toteja highlighted that Virtual Labs are the need of the hour, especially in the wake of the COVID-19 situation. He also talked about how Virtual Labs will make scientific education accessible to all. Prof Vibha Gaur, event convener welcomed the speaker and the participants for 3 weekends full of learning and hands-on training.

9th October and 10th October, 2021 (Day 1 and Day 2): The first two days of the workshop covered Javascript and Typescript. Javascript syntaxing and typography serve as pre-requisite for Node JS and React JS. Node JS framework is a runtime environment which enables executing JS code outside a browser and helps build back-end for web or mobile apps. While React framework can enable building interactive user-interfaces. Learning these frameworks will enable Virtual Labs developers create interactive virtual practicals (in different fields) which students can experiment with from a browser or an app.

16TH OCTOBER AND 17TH OCTOBER, 2021 (DAY 3 AND DAY 4):

On Day 3, the participants were given a walkthrough of NodeJS. They learnt how to create Javascript files for HTTP requests of string and url type in NodeJS using command line arguments. This was followed by installation of YARN, introduction to NPX and the difference between YARN and NPX. The participants also learnt to create a React demo website was created using NPX and how to run the React app. The resource person also explained the difference between vanilla Javascript, ECMA script and JSX. Then he demonstrated how to use JS variables in React JSX code, variable tinkering and how to obtain the output on node server. The participants were asked to make Tic-Tac-Toe as an assignment.

Day 4 continued with the Tic-Tac-Toe game and learning about react hooks, useState, class components. Then the resource person introduced how to create components, states, props inside a React framework. A brief introduction to reactDOM was given, and how different variables can be used inside JSX's HTML. Participants could now create the Tic-Tac-Toe game project using the official react documentations available online. The resources person fielded many doubts to enable participants understand more about react hooks, hot reloading, and difference between creating react app using NPM vs NPX.

Photo 7

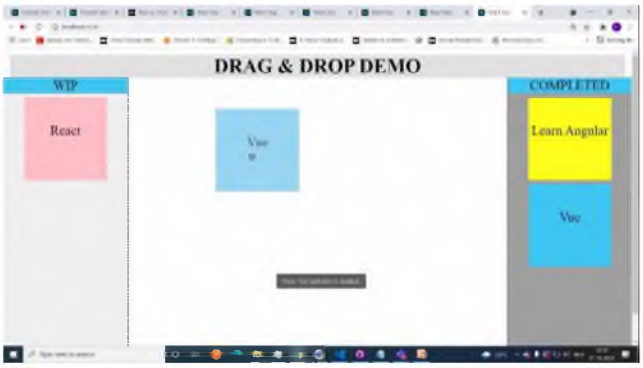

Photo 8

23RD OCTOBER AND 24TH OCTOBER, 2021 (DAY 5 AND DAY 6):

On Day 5 participants learnt about Drag and Drop demo using React JS and vanilla javascript by involving CSS. A demonstration of bootstrap for the same was also given and how rendering can be done in React. The resource person also showed how the chess game can be created.

Participants demonstrated their assignments on Day 6. Followed by a detailed discussion on viewports, responsiveness, react router dom, devops, devops processes, etc. Speaker also discussed how to manage code so that it is not dependent on a single person, demonstration of react-router-dom, demonstration of react-kanban, and how to hide source code. A brief overview on Trello and JIRA was also given. During the doubt sessions, participants discussed their queries about Rest API, @media queries using JS etc.

Towards the end the officiating Principal and Institute DBT Star Head Prof. Ravi Toteja congratulated the Computer Science Department on organizing this workshop and pinned his hopes that the Acharya Narendra Dev College would be able to create Virtual Labs in future. The workshop concluded with a vote of thanks from the Department DBT Star Coordinator Dr. Harita Ahuja who expressed her gratitude towards the resource person Mr. Chandra and also all the participants who sincerely participated in all the sessions.

Workshop Schedule

2.00 PM to 3.00 (Theory)		3.00 PM to 4.00 PM (Hands-on Lab)
Introduction to Face Recognition, Mathematical Techniques used, Face Recognition Algorithms	**Tuesday 26 Oct 2021**	Download and Installation of Anaconda, Spyder, Face Recognition Python Library. Test if it is working.
Load a Face photo, Size of matrix, Python Image Library (PIL), Display Face using PIL	**Wednesday 27 Oct 2021**	Lab 1: Load a photo and display Lab 2. Load your family Group photo and display
Face Detection and Face Locations.	**Thursday 28 Oct 2021**	Lab 3: In a Group photo, locate the Faces and mark with Rectangle Lab 4: Write a label on the faces detected in a group photo
Face Signature/ Face Encodings	**Friday 29 Oct 2021**	Lab 5: Resemblance of Faces for a sample set of photos
Face Distance Function, Find the Resemblance of Faces	**Saturday 30 Oct 2021**	Lab 6: Daughter and Mother Resemblance detection program

REPORT

FOSS Club, Department of Computer Science in collaboration with Internal Quality Assurance Cell, Acharya Narendra Dev College under the aegis of DBT Star College Scheme 2021-22 are organised Five Days online Faculty Development Program on the topic of "Face Recognition using Python (Part-I)" on October 26, 2021 to October 30, 2021 at 02:00 PM - 04:00 PM on Microsoft Teams. The workshop was convened by Dr. Sharanjit Kaur along with Co-Convener Ms. Gunjan Rani. It was attended by the faculty and students of various colleges. We had Dr. Xavier Chelladurai as our eminent guest speaker. He is Director of the Human Resource Development Centre at Christ University, Bangalore as well as a Professor, Computer Science and Engineering at the same university. In this Faculty Development Program, the participants got to know about that Facial recognition is becoming a reality in the coming days which is used at many places for various applications.

DAY 1: On the day one He explained basic fundamental of face recognition and its algorithms and also discussed about the download, installation of Anaconda and Spyder as well as various libraries used in face recognition. He discussed how can anyone changed a particular image to Numpy array and vice-versa.

DAY 2: The Day two concentrated on how to load an image, locate faces in an image and how to locate multiple faces in an image and count them, and also discussed put rectangle around face, or in an image, put line and text in an image, change filter of image.

DAY 3: The Day 3 concentrated on Face Detection and Locations as well as in a group photo, detect the face and mark with rectangle. He discussed about PIL (Python Image Library) and continued the drawing of rectangles and writing text over multiple faces in an image.

DAY 4: The Day 4 concentrated on face encodings techniques where we could find the signature of a face. He also discussed about how two faces are compared to find the resemblance.

DAY 5: The Day 5 concentrated on the Face Distance Function which would compare signatures of two faces which will tell us whether the two faces are of the same person or not.

Overall, the FDP was aimed at enhancing the professional skill set of participants. The Session was very interactive as the participants were given at the end an assignment test.

At the end of the program, participants were awarded with the E-certificates. Session ended with the vote of thanks by Department DBT Star Coordinator Dr. Harita Ahuja who expressed her gratitude towards the resource person Dr. Xavier Chelladurai and also all the participants who sincerely participated in all the sessions. The workshop proved to be extremely informative and was a great success with participation of around 80 faculty and students of various colleges.

How to make a face signature?
The Face image is a large file. But the signature is a smaller file. A vector of (say), 64 or 128 numbers
Each number in the vector is called a feature. Feature Extraction is the key work.
If P1, and P2 are two photos of the same person, the signatures s1 and s2 are almost same. d(s1, s2) is very small.

(Foss Club Convener)

Dr. Sunita Narang
(Teacher-In-Charge)

Ms. Priyanka Sharma
(Event Convener)

Mr. Mahesh Kumar
(Event Co-Convener)

Workshop Schedule

11th March (Friday)

1. DevOps Overview
2. Linux Fundamentals
3. Virtual Machines
4. Cloud Overview
5. SCM Fundamentals
6. Setting up playing Environment
7. Create your first project
8. Containers Overview
9. Virtual Machines and Containers
10. Introduction to Linux Containers

12th March (Saturday)

1. Demo on Linux Containers
2. Setting up play with Docker
3. Getting used to Docker
4. Create a sample app in any language
5. Host your application in Docker
6. Introduction to Configuration Management
7. Ansible Overview
8. Create a sample play in Ansible

13th March (Sunday)

1. CI/CD
2. Jenkins Overview
3. Monitoring Overview
4. Logging Overview
5. Kubernetes Intro
6. Intro to k3s
7. Create Pods and Deployments
8. Introduction to Iaac
9. Wrap up the talk !!!!

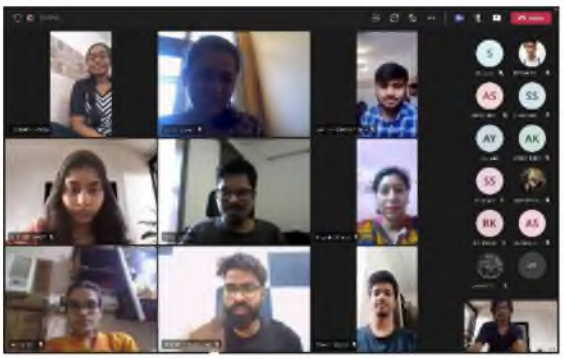
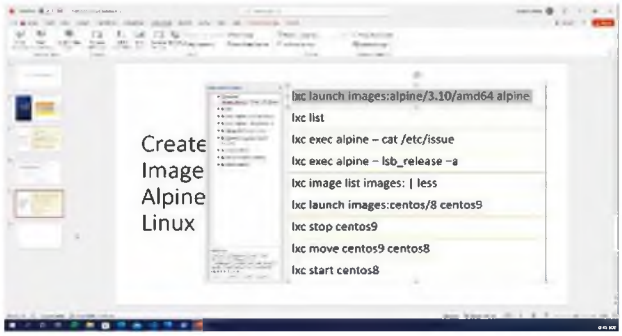
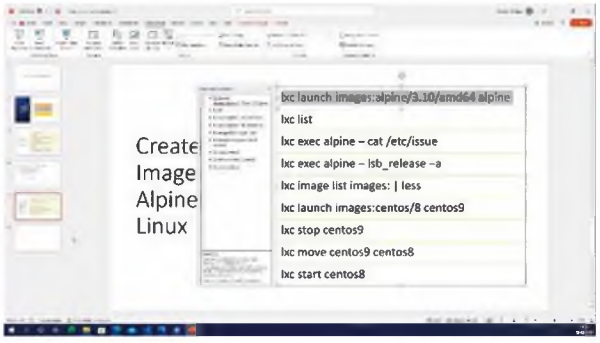
REPORT



FOSS Club of Department of Computer Science with Internal Quality Assurance Cell, Acharya Narendra Dev College under the aegis of DBT Star College Scheme 2021-22 organized a 3-day workshop titled "Let's Talk DevOps" from 11th-13th March 2022. This workshop was planned to introduce the students to practices and tools that enable Software Development, IT Operations and Deployment in the Software Industry. This gentle introduction can pave way for students to explore tools and technology used in DevOps environment. With the support of Prof. Ravi Toteja (Officiating Principal and Coordinator DBT Star Scheme), Dr Harita Ahuja (Department DBT Star Coodinator) and Dr Sharanjit Kaur (FOSS Club Convener), this workshop was convened by Ms Priyanka Sharma along with Co-Convener Mr. Mahesh Kumar. The workshop was attended by the students and faculty members of Acharya Narendra Dev College. Mr. Shailesh Thakur, a Senior DevOps Engineer at o9 Solutions Inc. was the resource person for this workshop. The workshop started with the encouraging words and warm welcome by the Teacher-in-Charge; Dr. Sunita Narang and FOSS Club convener Dr. Sharanijt Kaur.

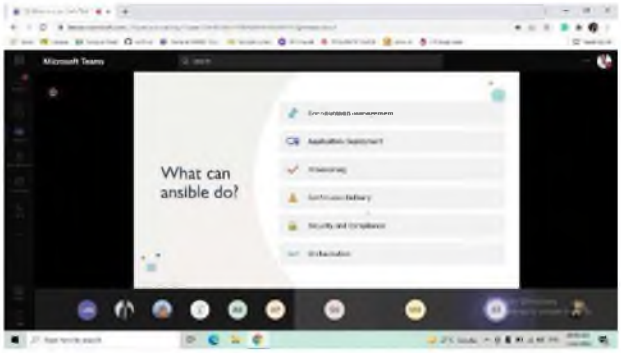
11th March, 2022 (Day 1): The first day was an interactive session which covered a review of various Linux commands, like to find IP address, OS version, set paths and directories, etc. An introduction to Virtual Machines, Clouds and Cloud computing, source control management was covered next. The importance of VMs and Clouds in SCM was highlighted in depth. The speaker then introduced the students to git(hub) and how it can be used SCM. A task to create github accounts and creat git projects was assigned to the participants.



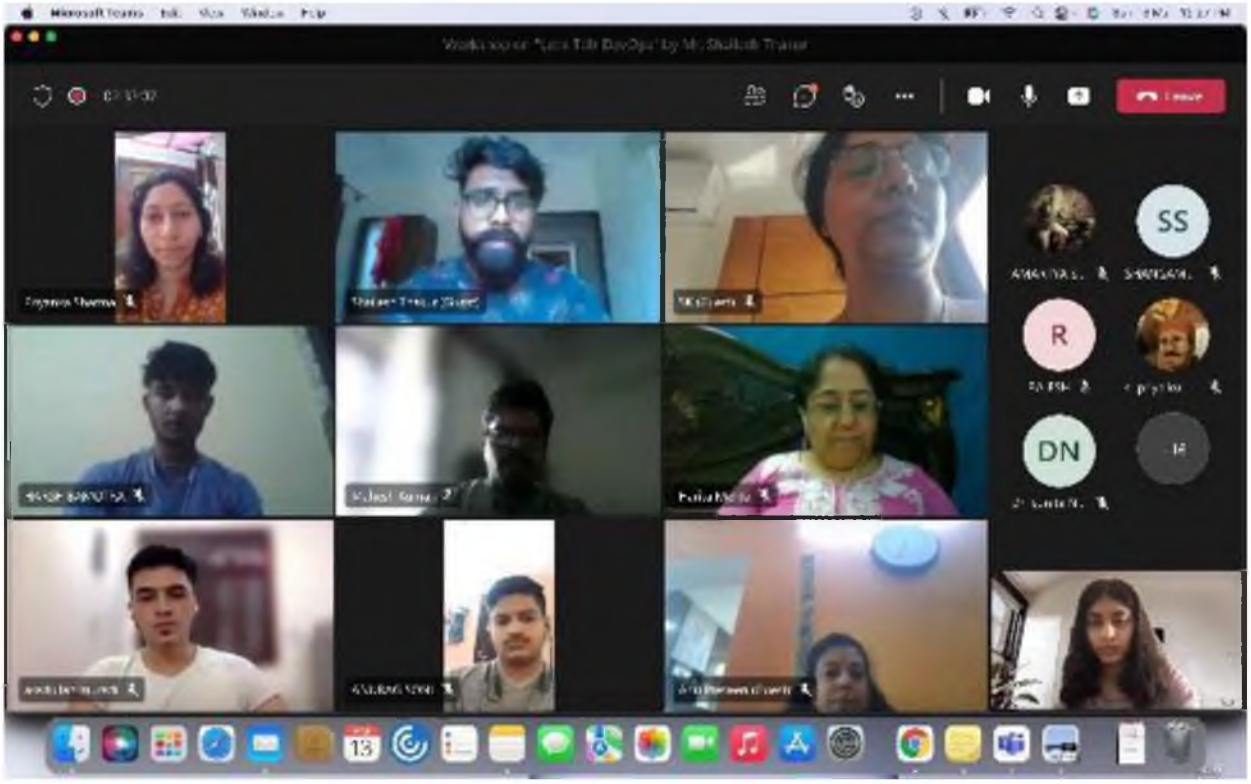


12TH MARCH, 2022 (DAY 2):

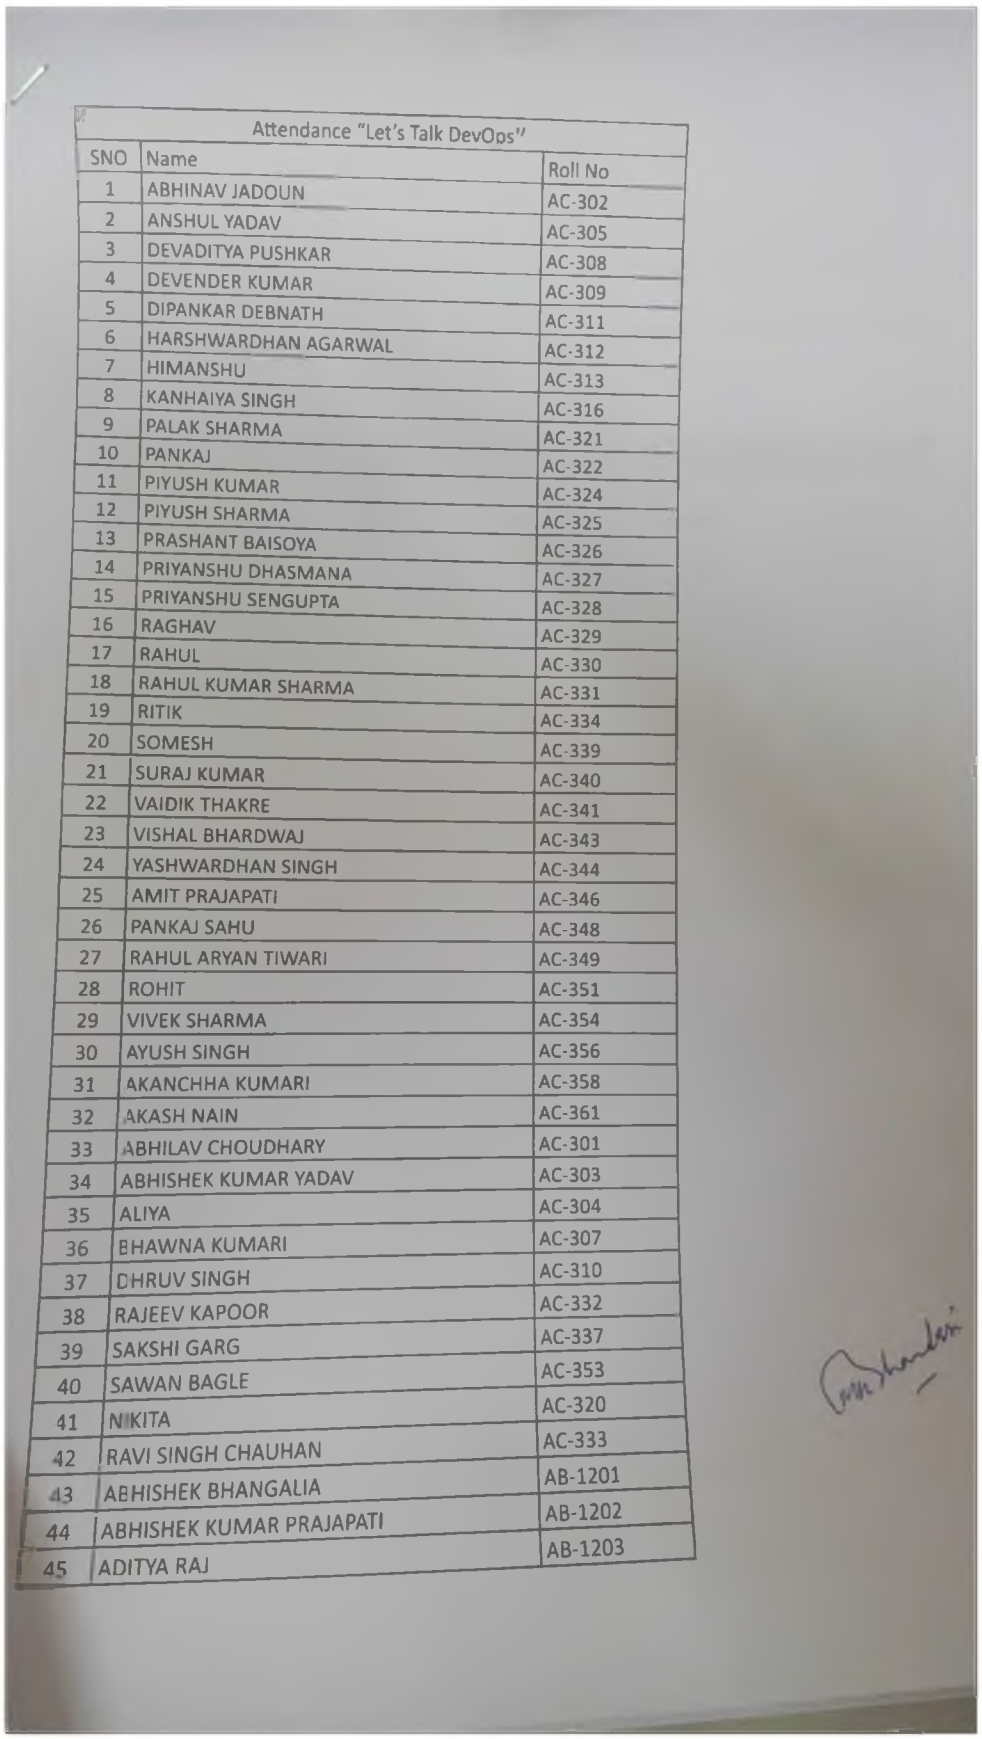
Day 2 was a hands-on session where the participants presented their work and discussed issues encountered. The resource person then talked about Containers and Virtual Machines. The session then moved to a discussion on usage of Docker Containers. Live walk-through of creating image on Alpine Linux, installation and set-up of LXD, installation of ngix was conducted by the resource person. Participants also demonstrated the experiments they conducted on the system alongwith the basics of LXD.



13TH MARCH, 2022 (DAY 3):



Day 3 continued to be a hands-on session with students presenting their experiments and discussing the issues faced. Docker installation and usage was also completed. Demonstrations on how to connect other machines using LXD docker, creating docker repositories were conducted. The speaker delved into Configuration and related Management followed by discussion on Ansible and its advantages. A walkthrough of how to run commands on other machines using Ansible was also



conducted. The session also covered a broad overview of Kubernetes, K3S setup and deployment.

The workshop concluded with a vote of thanks from the event Convener **Ms. Priyanka Sharma** who expressed her gratitude towards the resource person **Mr. Shailesh Thakur** and the entire team for the smooth conduct of the workshop. She also thanked the participants for energetically participating in the workshop and discussing their queries.

What can
ansible do?

REPORT

The Department of computer science in collaboration with Department of Commerce organised a webinar on the topic 'Role of IT in Indian Banking system' on July 14, 2021

under the DBT star scheme. The speaker was Professor Madhu Vij, Former Professor in Finance, Faculty of

Management Studies, University of Delhi. She is a well known academician with a corporate vision and an expert in the area of International Finance, Risk Management, Banking and Financial Services and Corporate finance and accounting. Currently she is Academic Council Chair and President at Global Risk Managment Institute, Gurugram.

The Webinar was well attended by faculty as well as students. Dr. Sunita Narang welcomed the guest and introduced her to the participants.

Prof. Vij delivered a very informative and enlightening talk on the topic. She talked about the growth of Indian banking sector in depth and described how banks have evolved from Arm chair banking to lazy and then crazy banking and post Covid, it is going to be super crazy banking. Whereas traditional banking ensure close connect between bank and customers, the modern era is about faceless banking. She also talked about the transformation, reinvention and future of Indian Banking. Infact it is important for banks to innovate or else they will perish keeping in mind the dynamic environment. The growing NPAs are posing a biggest challenge for the Indian Banking system. She suggested that future of Indian Banking is about artificial Intelligence, Big data analytics and cyber security for solving problems pertaining to banks. She tried her best to answer all the queries asked by the inquisitive students.

Prof. Ravi toteja thanked Prof Madhu vij and both computer Science as well as Commerce Department for organising the webinar. Finally, Dr. Shalu Mahajan delivered the Vote of Thanks.

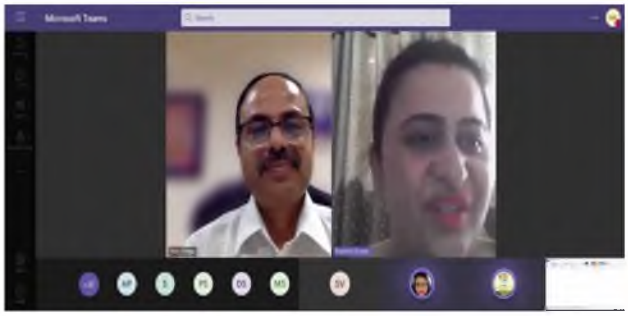
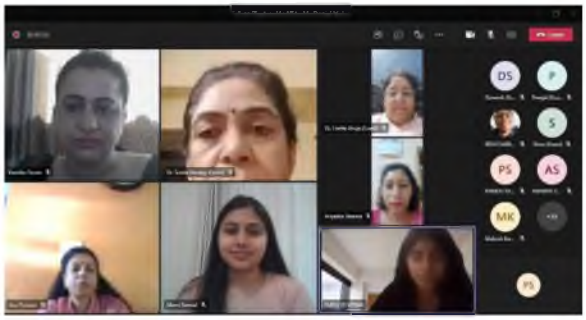
REPORT

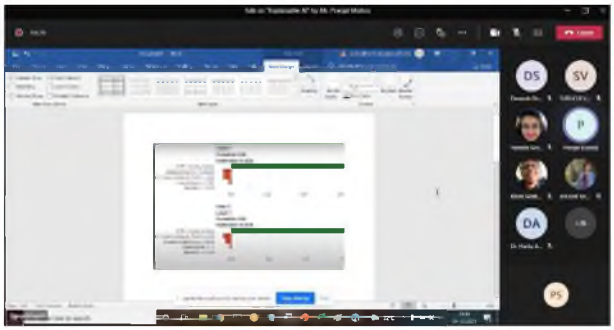


Turing Society of Department of Computer Science of the Acharya Narendra Dev College under the aegis of DBT Star College Scheme 2021-22 organized an online technical talk on the topic "Explainable AI" on 4th October 2021. The Talk was convened by Ms. Vandita Grover along with Co-Convener Ms. Priyanka Sharma. It was attended by the students of the Computer Science Department. We had Mr. Pranjal Mishra as our eminent guest speaker. He is working as a Lead Data Scientist at CIMB Bank, a leading global bank. Mr. Mishra is also a Data Science Trainer since 2019.

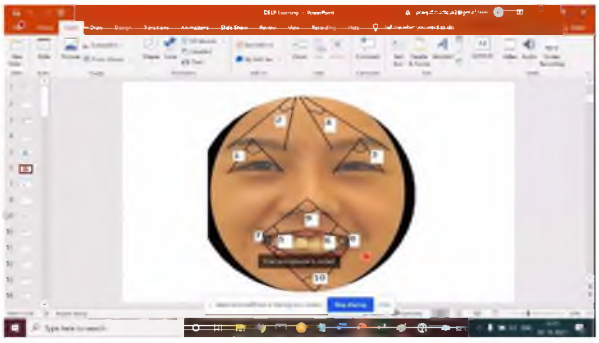


The session started with the encouraging words of the respected Officiating Principal; Prof Ravi Toteja followed by a welcome note by the convener.

The session started with a discussion on what is AI and how various sub-fields like Machine Learning, Neural Networks, Deep Networks etc. use different features and determine mathematical combinations to enable computers (machines) to make intelligent decisions. The speaker highlighted the present challenges in AI - performance and interpretability. And stressed on the need to make AI more explainable in order to justify why a decision was made. For instance, which feature had the most impact, the order of importance of different features while predicting the results.



As machines are trained on various examples, some inherent bias may get introduced based on the kind of examples it is trained on, thus explain-ability is crucial to ensure transparency, build trust for the design of interpretable AI. The students were also introduced to to Root-Cause analysis, What-if tools and LIME for better understanding of interpretable AI.



Towards the end, Dr. Harita Ahuja, the Department DBT-Star Scheme coordinator delivered a vote of thanks to Speaker and concluded the session. The participants were interactive and the talk was successful in piquing interest in the field of Explainable AI.

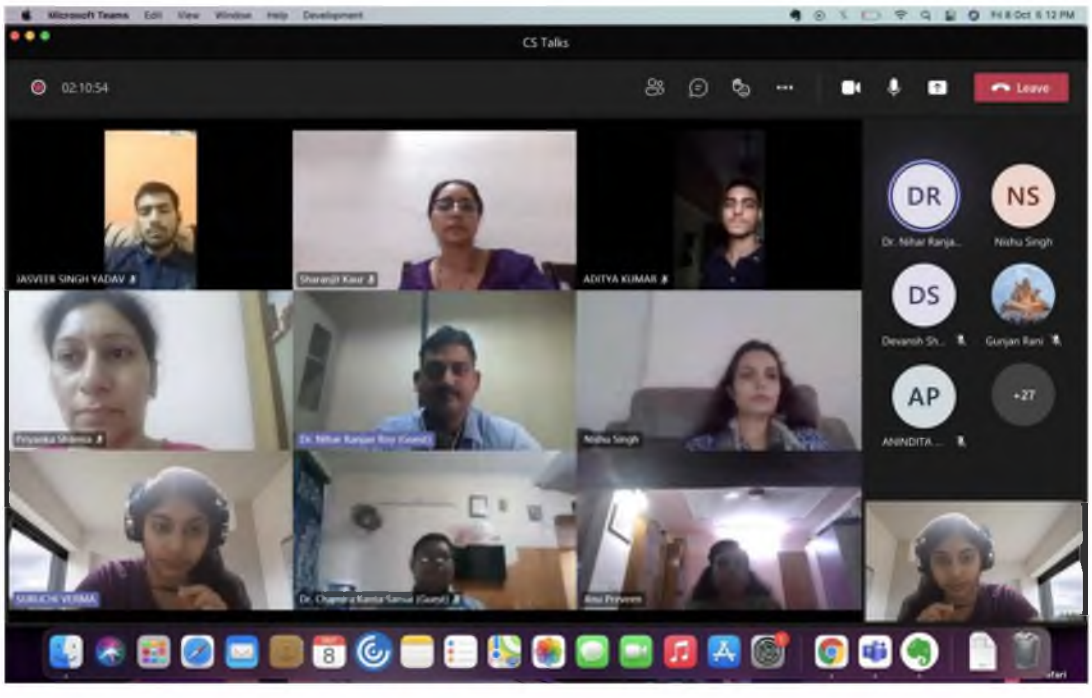
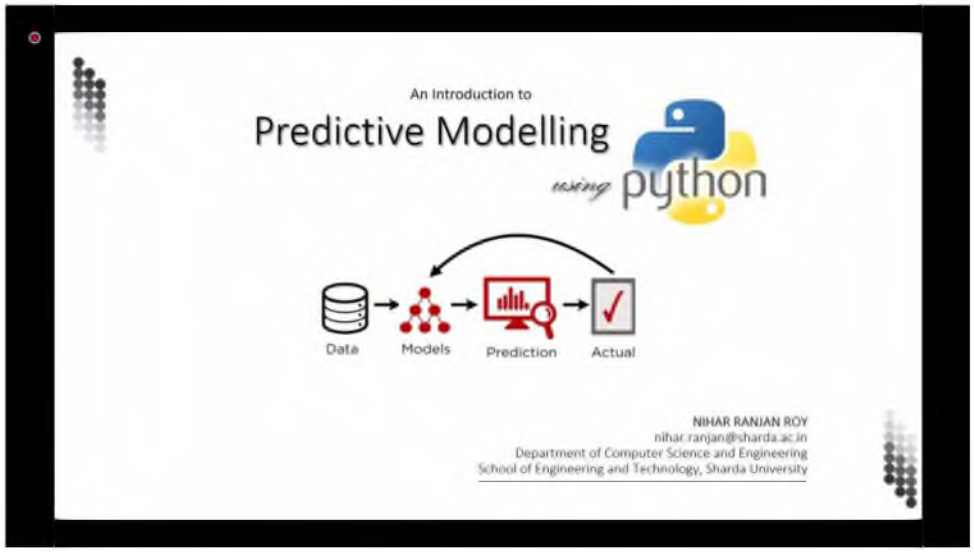
REPORT

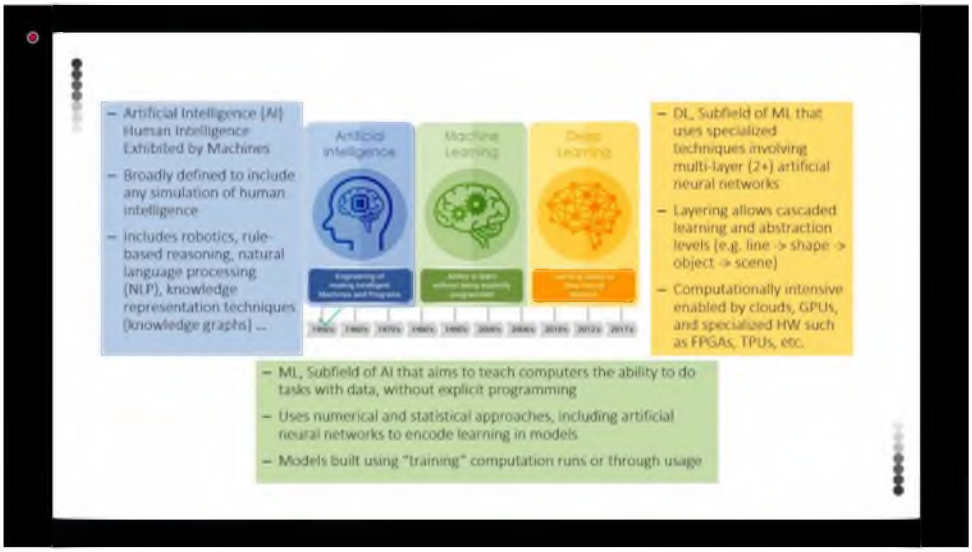
Turing society of Department of Computer Science in collaboration with Internal Quality Assurance cell under the aegis of DBT Star College Scheme 2021-22 of the Acharya Narendra Dev College organized an on-line technical talk on the topic of "Predictive Modelling using Python" on 8th October 2021 at 3:00 PM - 5:00 PM on Microsoft Teams. The Talk was convened by Dr. ChandraKanta Samal. It was



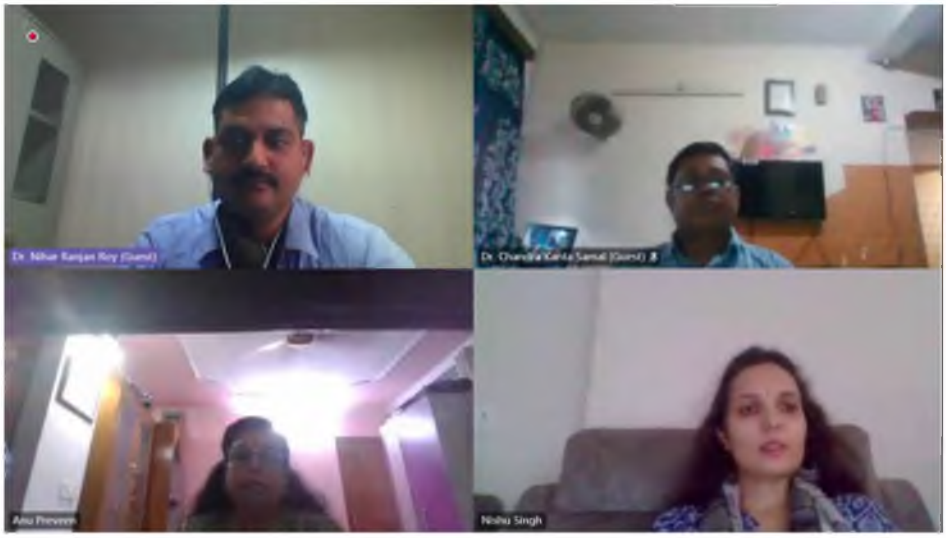
attended by the students and faculty. We had Dr. Nihar Ranjan Roy as our eminent guest speaker. He is working as an



Associate Professor in Department of Computer Science & Engineering, Sharda University, Greater Noida, UP.



He had started the session with a talk on **Predictive Modelling, an application of Data Science.** It is a mathematical process that seeks to predict future events or outcomes by analyzing patterns that are likely to forecast future results. This is also known as predictive analytics. Data analysts do modelling with statistics and other historical data. It tries to help you understand why the models gave different weighted scores.



He discussed why we should use Python Language as well as clears the confusion between Artificial Intelligence, Machine Language and Deep Learning. He also discussed the various types of Machine Learning algorithms e.g. supervised, unsupervised and Reinforcement Learning. He discussed the difference between Correlation and Causation. He discussed the Linear Regression and its two types e.g. Simple Linear Regression and Multiple Linear Regression.

At the end, Ms. Anu Preveen delivered a vote of thanks to Speaker and concluded the session. All Participants were interactive and shown keen interest in the topic of the talk. The talk was a great success.

NIHAR RANJAN ROY
nihar.ranjan@sharda.ac.in
Department of Computer Science and Engineering
School of Engineering and Technology, Sharda University

– Artificial Intelligence (AI)
Human Intelligence Exhibited by Machines
– Broadly defined to include any simulation of human intelligence
– includes robotics, rule-based reasoning, natural language processing (NLP), knowledge representation techniques (knowledge graphs) ...
Artificial Intelligence
Machine Learning
Deep Learning
– DL, Subfield of ML that uses specialized techniques involving multi-layer (2+) artificial neural networks
– Layering allows cascaded learning and abstraction levels (e.g. line -> shape -> object -> scene)
– Computationally intensive enabled by clouds, GPUs, and specialized HW such as FPGAs, TPUs, etc.
– ML, Subfield of AI that aims to teach computers the ability to do tasks with data, without explicit programming
– Uses numerical and statistical approaches, including artificial neural networks to encode learning in models
– Models built using "training" computation runs or through usage

REPORT

Turing society of Department of Computer Science in collaboration with Internal Quality Assurance cell under the aegis of DBT Star College Scheme 2021-22 of the Acharya Narendra Dev College organized a technical talk on the topic of "Cisco Network Administration" on 3rd & 4th March 2022 at 10:00 AM-12:00 PM in Seminar Hall. The Talk was convened by Dr. ChandraKanta Samal. It was attended by the students and faculty. We had Mr. Bineet Kumar Joshi as our eminent guest speaker. He is working as an Assistant Professor in Department of Computer Science, Swami Rama Himalayan University.

Day 1: Mr. Bineet Joshi gave an overview of Cisco Network and Company. He taught students the importance of CCNA and CCNP certification. He then taught various topics related to Computer Networks like types of Networks etc. Important topics like what are Switches, Hubs, and Routers were covered in detail. The basics of Networks were covered on first day.

Day 2: On day 2 Sir presented how networks can be created by online simulation using Cisco Packet Tracer. He created various networks using first only Hubs, then Switches, then Routers. He gave a contrast of how connecting devices like PC and Laptop using Switches differ from Routers or Hubs. Sir, enunciated how various network devices are configured. He also explained the advantages and disadvantages of Hubs, Switches, and Routers. The simulation was highly interactive and by the end we had a doubt session.

At the end, Dr. Chandrakanta Samal delivered a vote of thanks to Speaker and concluded the session. All Participants were interactive and shown keen interest in the topic of the talk. The talk was a great success.

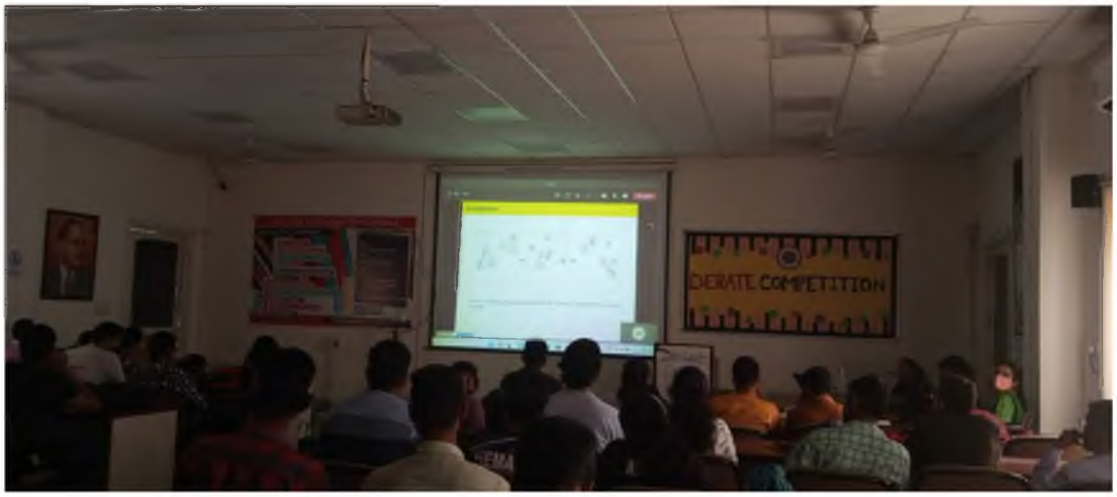
REPORT

Turing society of Department of Computer Science in collaboration with Internal Quality Assurance cell under the aegis of DBT Star College Scheme 2021-22 of the Acharya Narendra Dev College organized a technical talk on the topic of "Wireless Security Network " on 4th March 2022 at 02:00 PM-04:00 PM in Seminar Hall. The Talk was convened by Dr. ChandraKanta Samal. It was attended by the students and faculty. We had Prof. Sanjay Kumar Dhurandher as our eminent guest speaker. He is working as an as Professor and Head in the Division of Information



Technology, Netaji Subhas Institute of Technology (NSIT), University of Delhi, India.

Prof. Sanjya Stated the talk with brief introduction about Opportunistic networks and explained the concept of Opportunistic networks and how they are different from normal ones. He explained various advantages and disadvantages of the same. He also explained about all the areas the Opportunistic Networks are in widely use. He taught about 6 models based on Opportunistic Networks and explained their strengths and weaknesses. He also explained algorithms of all models. He also taught students the various research area for future related to Opportunistic Networks and how students who are interested in this field can proceed in future. In the end he took doubts of students.

At the end, Dr. Chandrakanta Samal delivered a vote of thanks to Speaker and concluded the session. All Participants were interactive and shown keen interest in the topic of the talk. The talk was a great success.

REPORT

FOSS Club of Department of Computer Science, Acharya Narendra Dev College organized a one day workshop on Google Classroom for first year students of Acharya Narendra Dev College. The workshop was of 4 hours duration, it started at 1:00 PM and ended at 4:00 PM.

The workshop was organized keeping in mind the need of making new students familiar with the ongoing means of online teaching. The workshop was conducted under FOSS Club convener Dr. Sharanjit Kaur, and Members, Dr. Harita Ahuja and Ms. Gunjan Rani where Dr. Sharanjit Kaur and Ms. Gunjan Rani were the resource persons for the same. The workshop was attended by more than 50 students.

The workshop introduced various functions of the Google Classroom to the students like how can they join a Google Classroom, how can they view and submit any assignment assigned to them by their teacher, how can they post any query, or how they can check the notes posted on the Classroom. The teachers also demonstrated

the students how their attendances and assignments will be tracked throughout the semester. They were also shown how late submission of assignments will be tracked and thus motivated them to be on time on their assignment submissions. In the end students were asked to share their doubts which were further solved by the teachers.

Conferences/Workshops/Seminars for the year 2019-20

e

REPORT

Acharya Narendra Dev College is a pioneer within the University in exclusive use of Linux Operating System and other Free & Open Source Software (FOSS) on its PCs. It adopted FOSS in the year 2007 to provide great learning and sharing opportunities to its students. Under this initiative Department of Computer Science of the college organizes an Introductory workshop every year to welcome freshers into the world of FOSS. It is mandatory for all the freshers of the thirteen courses, that college offers, to attend the workshop whether they have taken computer science course or not, as Linux is the only operating system available on its laptop and desktop machines unless other proprietary software is dictated by the syllabus. This year too a four day workshop was organized from 16th Sept., 2019 to 19th Sept., 2019 to familiarize the incumbents of various courses with FOSS concepts

Senior students of B.Sc. (H) Computer Science and B.Sc. Physical Science (Computer Science) were roped in as volunteers for the workshop. They are the ideal candidate for this purpose as they attended this workshop as freshers and then they have been extensively trained through the year on various Linux platforms. Each session was divided into three parts. The first part covered introduction to FOSS and salient features of Linux operating system including why it comes under the category of open source software. Second part gave a contrast between Linux & Windows operating system. And third part introduced Libre Office which included LibreOffice Writer for writing text, LibreOffice Calc for working on spread sheets and LibreOffice Impress for preparing presentations. To impart functional knowledge a practice session was also given to the students. The workshop was a great success. Most of the students of each course could attend it and it turned out to be a great learning experience for all the participants as well as volunteers. The enthusiasm and passion of the new students and volunteers was commendable all through the workshop. Participants were interactive and showed keen interest in the hands-on sessions of the workshop.

REPORT

Department of Computer Science of the Acharya Narendra Dev College under DBT Star Scheme organized a one day workshop on the topic of "Machine Learning" on 4th March 2020. The Talk was convened by Dr. Sharanjit Kaur and Dr. Harita Ahuja. It was attended by all the students and faculty of the computer science department. We had

(Prof.) Dr. Ramesh Aggarwal as our eminent guest speaker. He is working as a Professor in Jawahar Lal Nehru Univeristy . He had started the session with a talk on Machine learning, an application of Artificial Intelligence (AI). It provides systems the ability to automatically learn and improve from experience without being

explicitly programmed. It focuses on the development of computer programs that can access data and use it to learn for themselves. He also discussed the applications and types of Learning. There are various types of Learning e.g. supervised, unsupervised, Reinforcement Learning, etc.

At the end, Dr. Sharanjit Kaur delivered a vote of thanks to Speaker and concluded the session. All Participants were interactive and shown keen interest in the topic of the talk. They were provided with the certificates after the sucessful completion of the workshop.

REPORT

The Turing Society of Computer Science Department of Acharya Narendra Dev College under DBT Star Scheme 2018-19 organized a Technical Talk on System Automation and HA clustering on 7th November, 2019. Our eminent Speaker was Mr. Manish Bansal, Principal System Engineer, Altran Technologies. It is the technology by which a process or procedure is performed with minimal human assistance. Mr. Bansal also discussed the advantages and uses of Automation or automatic control in various control systems for operating equipment such as machinery, processes in factories, boilers, heat treating ovens, aircraft, and other applications and vehicles with minimal or reduced human intervention.

At the end convener of Turing society Dr. Chandra Kanta Samal delivered a vote of thanks and concluded the session. The enthusiasm and Passion of the students and volunteers was commendable all through the talk. Participants were interactive and showed keen interest in the topic of talk. The talk was a great success.

Event Name: System Automation & HA clustering
Date : 7th Nov, 2019
No. Of Beneficiaries: 63

REPORT

Department of Computer Science of the Acharya Narendra Dev College under DBT Star Scheme organized a webinar on the topic of " Unravelling the Social Network of Covid-19 in India from 30th Jan to 6th Ap, 2020" on 15th June 2020. The webinar was convened by Dr. Sharanjit Kaur and Dr. Sunita Narang. It was attended by all the students of the computer science department. We had Dr. Satita Azad as our eminent guest speaker. She is working as an Assistant Professor in IIT Mandi, Himachal Pradesh, India.

She started session with how the network of Covid spread in India from time period 30th January to 6th April 2020 and the use of tool Social Network analysis to map and measure the relationship among people and organisations. She further explained various kinds of networks and gave an example of Mumbai attack 26/11 and also discuss how these studies are beneficial in taking out the major factor of spreading such viruses.

At the end, Dr. Sharanjit Kaur delivered a vote of thanks to Speaker and concluded the session. All Participants were interactive and shown keen interest in the topic of the talk. The talk was a great success.

Event Name: Webinar on "Unraveling the Social Network of Covid-19 in India from 30th Jan to 6th Apr, 2020"
Date : 15th June, 2020
No. Of Beneficiaries: 76

REPORT

Acharya Narendra Dev College is a pioneer within the University in exclusive use of Linux Operating System and other Free & Open Source Software (FOSS) on its PCs. It

adopted FOSS in the year 2007 to provide great learning and sharing opportunities to its students. Under this initiative Department of Computer Science of the college organizes an Introductory workshop every year to welcome freshers into the world of FOSS. It is mandatory for all the freshers of the thirteen courses, that college offers, to attend the workshop whether they have taken computer science course or not, as Linux is the only operating system available on its laptop and desktop machines unless other proprietary software is dictated by the syllabus. This year too a four day workshop was organized from 28th Aug, 2018 to 04th Sep, 2018 to familiarize the incumbents of various courses with FOSS concepts. Senior students of B.Sc. (H) Computer Science and B.Sc. Physical Science (Computer Science) were roped in as volunteers for the workshop. They are the ideal candidate for this purpose as they attended this workshop as freshers and then they have been extensively trained through the year on various Linux platforms. Each session was divided into three parts. The first part covered introduction to FOSS and salient features of Linux operating system including why it comes under the category of open source software. Second part gave a contrast between Linux & Windows operating system. And third part introduced Libre Office which included LibreOffice Writer for writing text, LibreOffice Calc for working on spread sheets and LibreOffice Impress for preparing presentations. To impart functional knowledge a practice session was also given to the students. The workshop was a great success. Most of the students of each course could attend it and it turned out to be a great learning experience for all the participants as well as volunteers. The enthusiasm and passion of the new students and volunteers was commendable all through the workshop. Participants were interactive and showed keen interest in the hands-on sessions of the workshop

REPORT

DEPARTMENT OF COMPUTER SCIENCE OF ACHARYA NARENDRA DEV COLLEGE ORGANIZED A WORKSHOP (UNDER THE STAR COLLEGE SCHEME) ON DIGITAL INDIA INITIATIVE IN COLLABORATION WITH CSC E-GOVERNANCE SERVICES INDIA LTD. ON 18TH SEPTEMBER, 2018.

CSC e-Governance Services India Limited is a Special Purpose Vehicle (SPV) set up by the Ministry of Electronics & IT to oversee the implementation of the

scheme. CSC SP
provides a centralized collaborative framework for delivery of services through Common Services Centers (CSCs).

CSCs are the last mile access points for delivery of various e-governance and public services such as PAN card, Election ID, UID etc. to citizens. They are also focused on employment generation through e-learning and skill development for rural communities.

About 150 studenrs from Department of Computer Science, Electronics and Zoology attended the workshop. The workshop was a great success. Participants were interactive and showed keen interest in the services offered by CSCs. Their enthusiastic participation led to greater awareness about the courses offered through the CSCs.

Introduction to New Experiments

Report of workshop

A one day Hands-on workshop on "Introduction to New Experiments" was organized by ANDC, under the aegis of DBT star scheme and IQAC on 21st April 2022 from 9:30 PM to 4:30 PM in Chemistry Laboratory IV of Acharya Narendra Dev College, University of Delhi. Dr Neeti Misra (Associate Professor, ANDC) and Dr Pragati Malik (Assistant Professor, ANDC) were the resource persons in the morning session. Students were taught Basics of Molecular Modelling and a detailed description of the Avogadro Software and Argus Lab Software was given. 38 students from different courses and Universities attended the workshop. Resource Persons gave an introduction of Computational Chemistry, Difference between Quantum Chemical Calculation and Molecular Mechanical Calculation, Density Functional Theory, Basis Sets and Functionals, Molecular Structure Building, Geometry or Structure Optimization, stability.

During the afternoon session, from 1:00 PM to 5:00 PM, Dr. Pooja Bhagat (Associate Professor, ANDC) and Dr. Kavita Mittal (Assistant Professor, ANDC) were the resource persons. Total participants including 10 students, 03 faculty and 02 lab-staffs from college attended the event. A manual of the topic "Thin Layer Chromatography" was given to the students for their future consideration. Later on, report showing the "Optimization of solvent system for the separation of components using thin layer chromatography" was submitted by the students along with the sequenced pictures of TLCs.

There was question answer session after each session. Participants were quite satisfied with the information given and we got positive response from them.

Resource Persons:

Dr Neeti Misra (Associate Professor, ANDC), 9810276577, neetimisra@andc.du.ac.in

Dr Pragati Malik (Assistant Professor, ANDC), 9910517371, pragatimalik@andc.du.ac.in

Dr. Pooja Bhagat (Associate Professor, ANDC), 9311402302, poojabhagat@andc.du.ac.in

Dr. Kavita Mittal (Assistant Professor, ANDC), 9810940472, kavitamittal@andc.du.ac.in

Report of Workshop on Analytical Laboratory Techniques

Four days work shop on **Analytical Laboratory Techniques** was carried out from 25th to 29th Oct 2021. Various analytical techniques were explained to students like UV – Visible Spectroscopy Shaker and Vacuum Rotary vapor Ultrasonicator and pH-meter, Nuclear Magnetic Resonance Spectroscopy, Infrared spectroscopy, Gravimetric Analysis and Weighing Instrument, Thin Layer Chromatography, Column Chromatography. Theory, Instrumentation, Application of various instruments to Industrial problems and Hands-on training on various equipments were also given to students so that they can have handle these equipments independently. The four day workshop was culminated by the talk on "Development of TL detectors for medical applications" By Aayushi Jain.

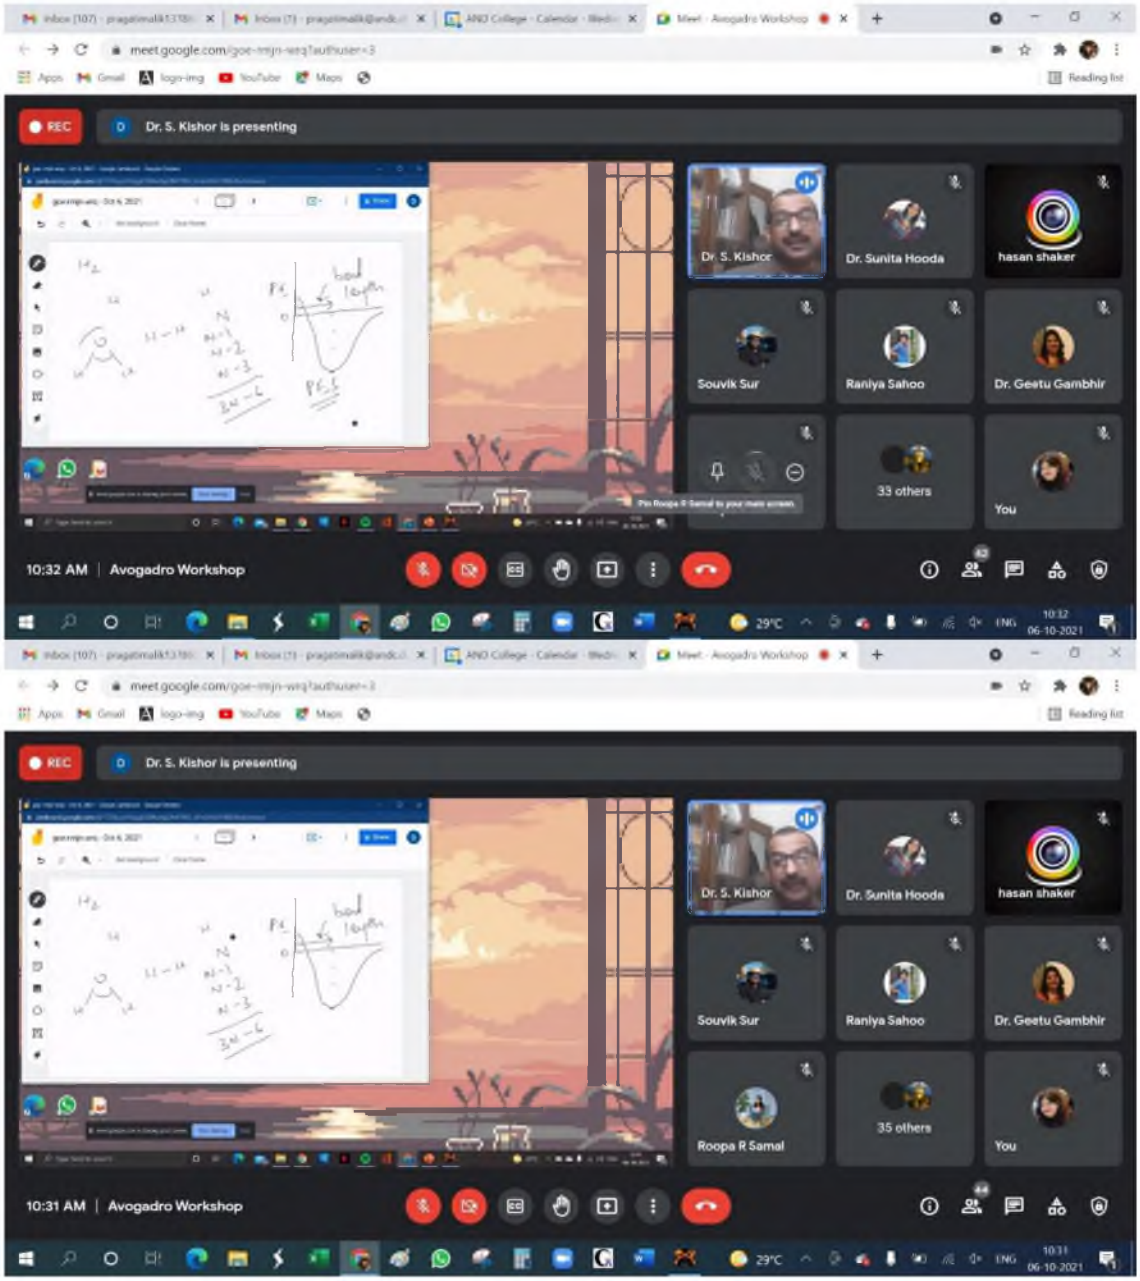
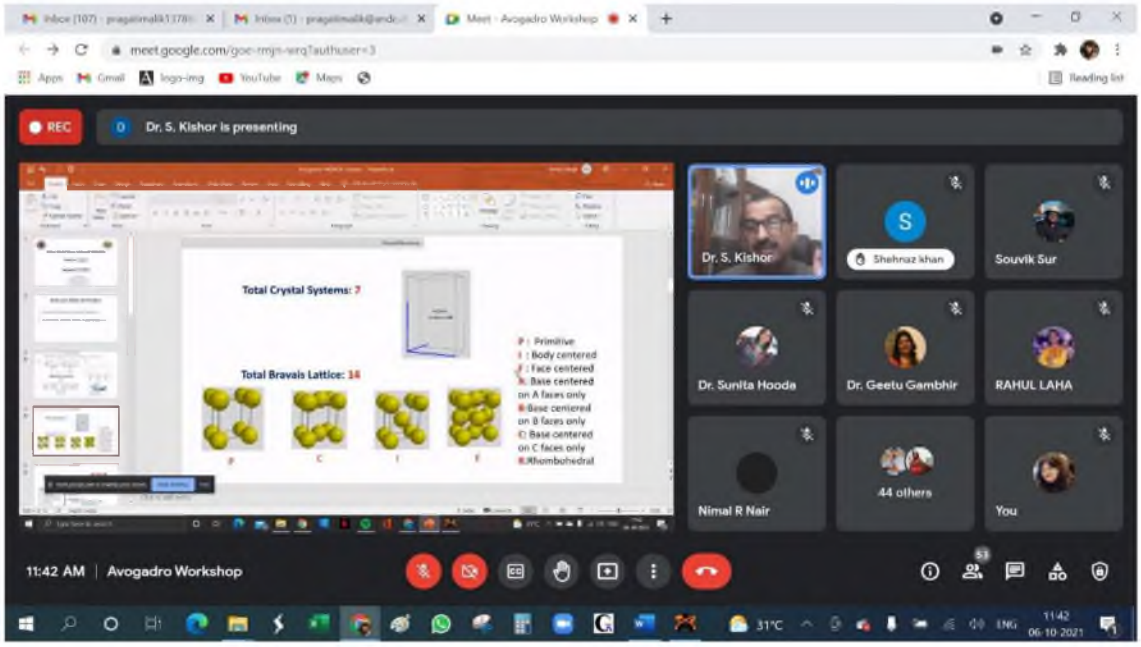
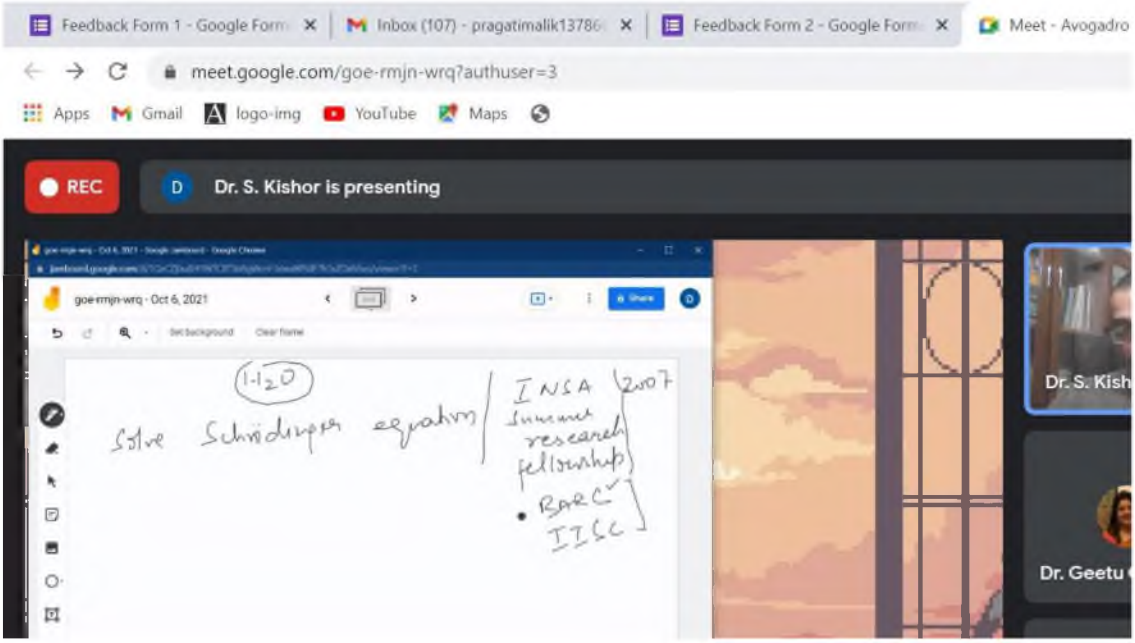
Computational Chemistry Workshop : A New Approach to Understanding & Solving Chemical Problems



Report of the Workshop



A two day workshop on "Computational Chemistry Workshop : A New Approach to Understanding & Solving Chemical Problems" was held by Abhikriya, The Chemical Society of ANDC, under the aegis of DBT star scheme and IQAC on 6-7 October 2021 from 10:00 AM to 4:00 PM on Google Meet. Dr Shyam Kishor, Associate Professor, Janta Vedic College, Baraut, Uttar Pradesh was the speaker. He gave detailed description of the Avogadro Software. Around 60 participants from different Colleges and Universities attended the Event. On first day, Dr Shyam Kishor gave an introduction of Avogadro, building molecules, carbon



nanotubes, biomolecules and supercell and performing geometry optimization calculations, various Quantum Chemistry packages and installation of ORCA. On second day, he taught DFT calculations, generate and visualize Molecular Orbitals and uv-vis spectra of a molecule. Participants were quite satisfied with the information given and got positive feedback.

Basics of Photoshop and it's applications for poster making, reports, photo editing and social media

Report of the Workshop

A two day workshop on "Basics of Photoshop and it's applications for poster making, reports, photo editing and social media" was organised by Abhikriya, The Chemical Society of ANDC, under the aegis of DBT star scheme and IQAC on 30 September to 1- October 2021 from 04:00 PM to 7:00 PM on Google Meet. Ms. Sonalika Arora, Digital marketing designer from Facebook was the speaker. She gave detailed description of the software. Around 70 participants including students and faculty from the Colleges attended the event.

On first day, she explained the pixels and explained the making of poster. On second day, photo editing was explained. Participants also submitted their own work as assignment.

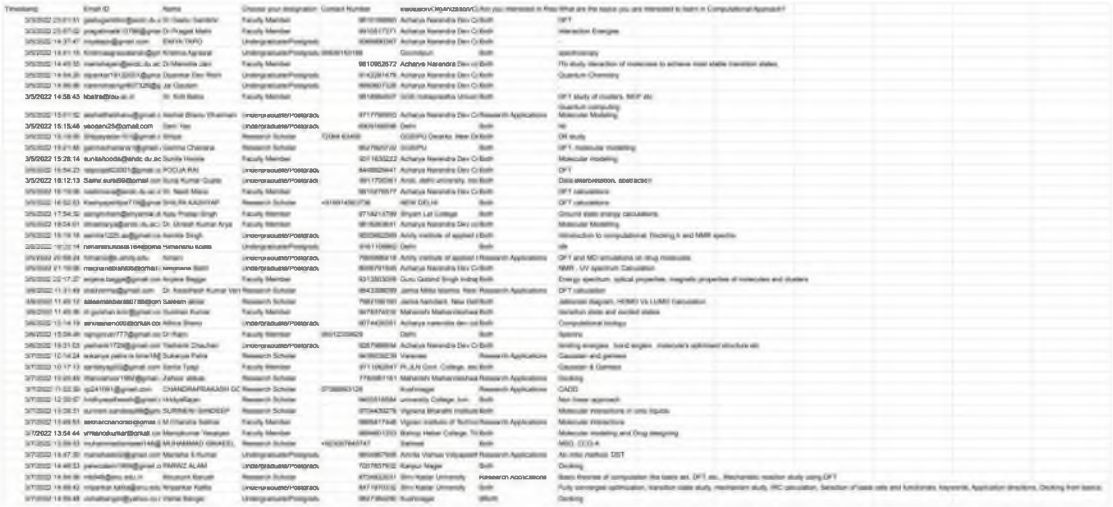
Hands-on workshop (online mode) on "Exploring and Understanding Computational Chemistry Using Gaussian:

Report of the Workshop



A four day workshop on "Exploring and understanding Computational Chemistry using Gaussian: molecular builder and visualization tool" was held by Abhikriya, The Chemical Society of ANDC, under the aegis of DBT star scheme and IQAC on 7-10 March 2022 from 1:00 PM to 3:00 PM on Zoom. Dr Nikhil Aggarwal, Director, Centre for Advanced Computational Chemistry Studies, New Delhi was the speaker. He gave detailed description of the Gaussian Software. Around 20 participants from different Colleges and Universities attended the Event. On first day, Dr Nikhil Aggarwal gave an introduction of Introduction to Computational Chemistry, Difference between Quantum Chemical Calculation and Molecular Mechanical Calculation, Density Functional Theory, Molecular size vs. accuracy vs. Time factor, Basis Sets and Functionals, Equilibrium and Non-equilibrium Properties calculation, Solvent effect: Implicit model vs. explicit mode, Molecular Structure Building, Pre-optimization. On second day, he taught Geometry or Structure Optimization: stability, Dipole Moment & Solubility, Frequency (IR Spectrum), Visualization of Types of Vibrational Modes (Stretching vs Bending), Raman Spectrum Calculation, NMR Spectrum Calculation, Excited states and UV spectrum Calculation, Visualization of Types of Molecular Orbitals: HOMO vs. LUMO. On third day, Single-Point Energy, Reaction mechanisms, Emission Spectrum: Fluorescence and Phosphorescence property Simulation Potential Energy Diagrams, Interaction Energies, Equilibrium and Transition State Structures, Excited States (Singlet and Triplet) Calculation: Jablonski Diagram, Orbital Contribution, Electron & Hole Density Distribution Maps, Charge Transfer: LMCT or MLCT. On fourth day, Basics of Molecular Docking, Software's Installation on Windows, Online Database Exploration, Docking studies: Protein-Ligand interaction (Docked structure, Binding Energy) using Autodockwise software. There was question answer session after each session. Participants were quite satisfied with the information given and got positive feedback.

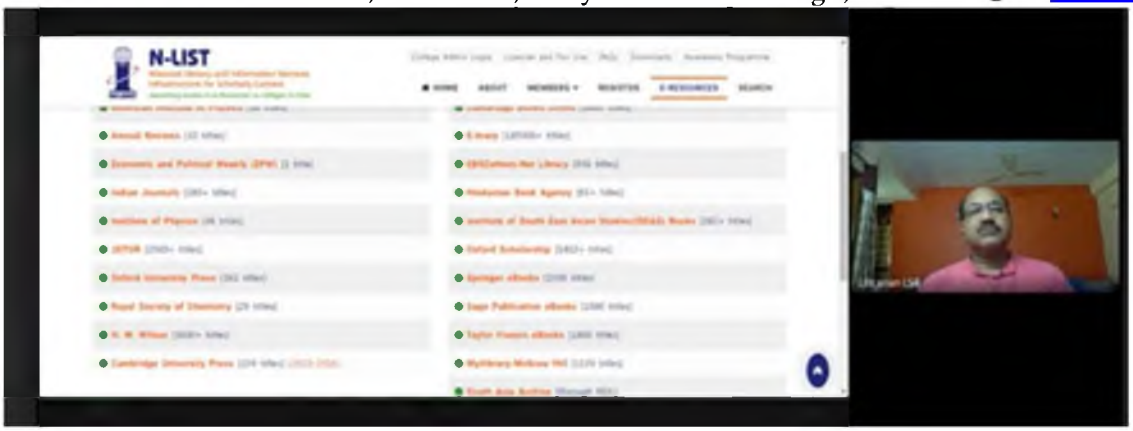
Report of Webinar on Ethics of Paper Writing

A webinar was organized on "Ethics of Paper Writing" on 19th April 2022. Ms. Shreya Arora, Reviewer Selection Lead at Taylor Francis, deliver a talk of paper writing. The

lecture was quite informative and students were very much interested in understanding the pattern of paper writing. They were explained about literature survey, introduction writing part, references arrangement etc. Patent filing was also explained in detail.

An online webinar on "e- resources of Delhi University and Inflibnet NList"



Brief description of the Event

Acharya Narendra Dev College Library organized the Webinar on 31st July 2021 at 3.00 pm on electronic resources available for the students and faculty. Dr. Rajesh

Singh, Librarian, Delhi University Library System delivered the talk on "E-resources
& Facilities Available through DULS". The talk by Mr. Anand Prakash Yadav, Librarian, Lady Shri Ram College (University of Delhi) made the participants aware about the "E-resources of Inflibnet N-List (National Library & Information Services Infrastructure for Scholarly Content)". More than 100 students and faculty members attended the webinar.

Contact Details of Resource Persons:

Report of an Alumni Lecture Series

An Alumnus Talk on "**Journey of an Alumni Episode -1 The Rise**" was successfully organized by Department of Chemistry, Acharya Narendra Dev College under the aegis of DBT star scheme and IQAC on 16th October 2021 from 12:30 PM to 2:00 PM on Google Meet. Mr. Rahul Giri from Katayev Lab, University of Fribourg, Switzerland was the speaker. He is our Alumni form BSc. (H) Chemistry, Batch 2013-16. He presented his work on the topic "Nobel prize in chemistry 2020! Organocatalysis before 2000" and gave information about chirality and history of organic synthesis. Participants including students, faculty from college and around 10 other alumni placed internationally attended the event. All students and faculty members enjoyed the program. At the end, wonderful responses received through Feedback form.

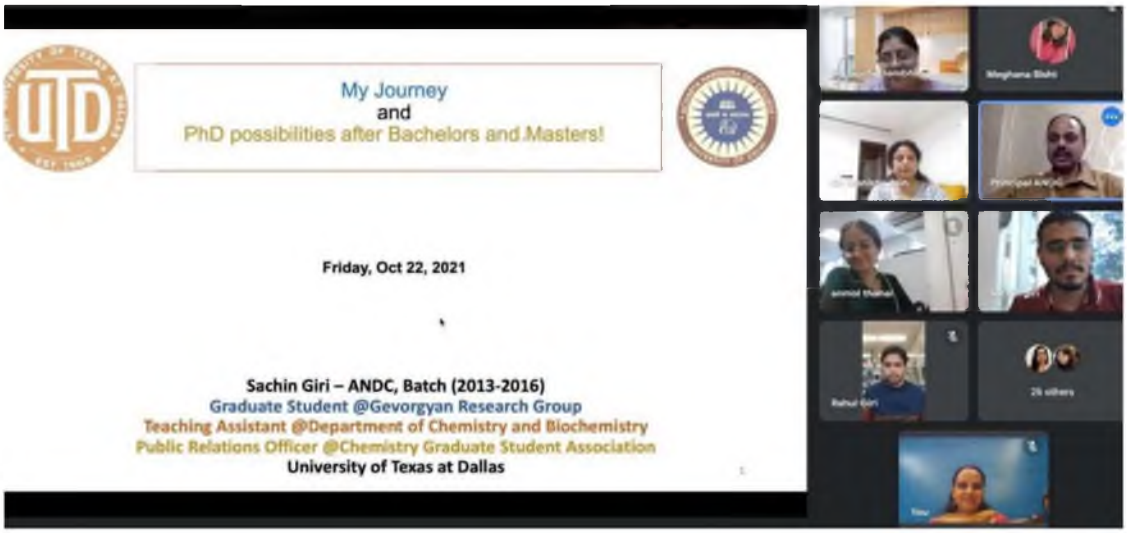
Report of an Alumnus Talk Series

An Alumnus Talk on "Journey of an Alumni Episode -2 The Rise" was successfully organized by Department of Chemistry, Acharya Narendra Dev College under the aegis of DBT star scheme and IQAC on 22nd October 2021 from 6:30 PM to 8:00 PM on Google Meet. Mr. Sachin Giri from Gevorgyan Research Group, University of Texas, Dallas, United States was the speaker. He is our Alumni form BSc. (H) Chemistry, Batch 2013-16. He presented his work on the topic "My journey and PhD possibilities after Bachelor's and Master's!" Around 50 participants including students, faculty from college and around 10 other alumni placed internationally attended the event. All students and faculty members enjoyed the program. He showed virtual tour of his working laboratory. His lecture was based on the various career options available abroad for the students.



At the end, wonderful responses received through Feedback form.

Career prospect at each stages
Stage 1: Postgraduate degree.
With a postgraduate degree in Science, we can:
1. Continue academic journey and undergo a PhD program.
2. Work in any R&D companies like Pharma, chemical synthesis
3. Many govt. bodies recruit science postgraduates as scientist. Like ONGC, IOCL, HPCL
Stage 2: Pursuing PhD degree.
What a PhD in science can offer:
1. Supported by fellowship which is sufficient to manage financial needs.
2. After getting a PhD working as an independent scientist in any R&D companies, govt agencies, etc.
3. Eligibility for Assistant professor.
4. Eligibility to enter post-doctoral training.
Stage 3: Post-doctoral training.
Career prospect after post-doctoral training:
1. As a lead of a research team in any R&D setting like CROs, Pharma or relevant companies.
2. Open a laboratory to carryout research on your area of interest.
3. Specialist/scientist/expert in a govt. agencies e.g., DST, DBT, CSIR etc

श्री संजय वोहरा
उद्यमिता सेल समन्वयक

Report

UBA@ANDC organised 'Hands on training' for skill development of the interested residents of the adopted area, Govindpuri on March 1st-2nd, 2021.

During recent visits to the area by UBA volunteers, they discussed the problems faced by the residents to which most of the residents informed that they are struggling for their livelihood as due to corona they do not have any more paid jobs. The purpose of the training program was to help them be self reliant.

In the training program, UBA@ANDC along with the Entrepreneurship Cell of the college, trained them in the preparation of different types of Hand Washes (Liquid Soap). During the program participants were given motivational talk and were also groomed with marketing skills. The participants were also given the set of material required for the preparation of these liquid soaps.

Report of Webinar on **Career Opportunities After Graduation**

Abhikriya, a chemical society was inaugurated on 12th Nov. 2020 and a webinar on

"**Carrier Opportunities After Graduation**" was organized. The speaker was Ms. Kanchan Nanda Balhan. Students were informed about various carrier options which they can have after completion of graduation. Students participated in large numbers to discuss about their career option that they can choose after their degree.

One Day Seminar on Intellectual Property Rights

Report

The Chemistry Department's Society, Abhikriya, organised a One Day Seminar on 'Intellectual Property Rights' under the aegis of the Star College Scheme, on 7th November, 2019. The seminar comprised of talks by Dr Nidhi Sandal, Additional Director and Scientist E, INMAS DRDO (Patents), Dr Arul George Scaria, Assistant Professor, National Law University
(Copyright) and Mr Ravi Chadha, Partner Trademarks- Rahul Chaudhry Partners (Trademarks). The program provided the holistic familiarity of the three IPRs to the students and faculty alike and was well appreciated by them.

Report

Workshop on

"Empowering Teachers: Current Technology based Educational Contents Creation and Delivery" (Using open source free software)

December 2-6, 2019.

Day 1 (December 2, 2019, Monday)

The first session started with welcome address by the Principal, Dr. Ravi Toteja and IQAC Coordinator, Dr. Yasheshwar and self-introduction of the participants. It was followed by a small presentation by the resource person, Mr. V. Krishnamoorthy on the objective of the workshop and the various techniques that would be discussed during the workshop for development and delivery of educational content. The purpose of the workshop was to introduce the participants to various open source and free software rather than focussing on expertise in few software. It was highlighted that the workshop will focus on creating and delivering educational content and the choice of software depends upon requirements of the content and the availability of funds. The participants were also introduced to the concept of Flipped-classroom.

The Day progressed with distribution of important software to be used during the workshop, to all the participants. Mr. Tarun and Mr. Sanjay Sangwan, the technical staff of the college, helped the participants in installing different softwares on their laptops. The session then focussed on overview of software *Balabolka*. Various ways in which this can be used to create audio content, was demonstrated by the resource person to the participants. The participants were also introduced to the concept of *silent classroom* and how it works using ***stream what you hear***.

The participants were asked to use the *Balabolka* software on the written educational content with them to prepare an audio file.

Day 2 (December 3, 2019, Tuesday)

The second Day began with the introduction of Audacity Software to create and edit audio files of the educational content. Participants created audio files of their content using *Balabolka,*

which is a text-to-speech software and recorded the audio with the help of Audacity software. Mr. Moorthy taught the participants how to edit the audio file using Audacity for producing a finished product. Throughout the day the participants edited their content and also learned the streaming of audio content in the concept of silent classroom.

The resource person also introduced the concept of wifi server on pen drive which is useful for lacal streaming of educational content.

Day 3 (December 4, 2019, Wednesday)

On third day participants were introduced to image editing tool-GIMP. The participants learned importing photographs in GIMP, editing their backgrounds, making gif animations, adjusting the picture size based upon final usage etc.

Participants were also taught the conversion of one video file format to the other, using the software *Handbrake*. The software is utmost useful in assisting the content creator to have a compatibility across various platforms.

A third software introduced to participants was a screen recording tool – Hypercam. This is useful for capturing screen activities in a video format. It was suggested by the resource person that this method in conjunction with audacity and webcam can be used for live capturing of classroom teaching.

Photos, an application of Microsoft available in windows, was also introduced to the participants to enable them to create videos using images and previously recorded audio files.

Day 4 (December 5, 2019, Thursday)

The fourth day concentrated on practicing the video editing of videos prepared in earlier sessions. For this the participants were introduced to software Openshot. Mr. Moorthy demonstrated correct handling of mobile phone to shoot classroom lecture by shooting few minutes lecture of some participants. He then explained the enriching of this video using Openshot software. He compared the two applications – Photos and Openshot for creating and editing videos.

For the remaining day, the participants prepared their educational videos based upon their own choice and understanding of various softwares introduced to them.

Day 5 (December 6, 2019, Friday)

On request of participants, the final Day of the workshop began with recapitulation of GIMP software. The participants also learned the video streaming. The participants were taught the live streaming using VLC.

An introduction about QR Codes, their generation and use was also given to the participants. This enables a user to encrypt any information in the QR Code and make it available for faster access to other user.

Participants presented their prepared videos and got their problems solved individually.

The Day ended with a verbal feedback session about the workshop from all participants and Vote of thanks to the resource person by the Workshop coordinator.

Tinkering for Scientists

Report

The Department's Society, Abhikriya organised its annual festival, Synergia 2019, on 13th

February 2019. The day started with the Inaugural Lecture, under the aegis of the Star College Scheme, by Prof. Dhananjay V. Gadre, NSUT, on "Tinkering for Scientists,". He is a Director of two open access laboratories at NSUT, namely Centre for Electronics Design and Technology (CEDT) and TI Centre for Embedded Product Design (TI-CEPD). The talk comprised of demonstrations of the devices relating to various principles of Science and was highly appreciated in-sync by the students and faculty of the college. Further program included various co-curricular activities like Chemistry Quiz, poster making and chemistry related fun games.

Workshop on 'Systematic Use of Digital Information in Academic Activities'

Report

Acharya Narendra Dev College
(University of Delhi)
Department of Chemistry

A workshop was organised by the Department of Chemistry, under the support of DBT Star College Scheme, on 10th November 2017 at the Web Centre. The workshop, with the theme of 'Systematic Use of Digital Information in Academic Activities', had an esteemed presence of Dr Tariq Ashraf (Deputy Librarian, University of Delhi) as the resource person. More than seventy students and faculty members participated in the workshop.

Dr Ashraf highlighted various aspects of Digital Information starting with various possible resources for the same. He then deliberated on the University of Delhi Library System in detail. The focus here was to let the students understand different e-resources such as books, journals and articles and ways to search them under varied criteria viz. author, year of publication. The hands-on mode at the web centre of the college helped the students to learn the techniques upfront and clear their doubts. The discussion was taken to the next level by including the concepts of Plagiarism and publication ethics.

The workshop was well attended by the students as well as faculty and was a great success and learning experience.

National Symposium on

Contemporary Environmental Concerns – 2018

Awareness, Assessment, Mitigation, Public health and Socio-cultural aspects

Day 1-Thursday March 15 , 2018	
08:30 -10:00	Registration
10:00-10:30	Inaugural Function
10:30-11:30	Keynote address Dr. B.C Sabata Sr. Scientific Officer, Department of Environment, Govt. of NCT of Delhi on "Youth and Environment"
11:30-12:00	Tea
12:00-1:00	Dr. R. Gopichandran Director,Vigyan Prasar, New Delhi
01:00-01:45	Lunch
01:45-02:45	Dr. Govind Singh Assistant Professor, Indraprastha College for Women, University of Delhi "Delhi at the Crossroads of Sustainable Development"
02:45-4:30	Oral/Poster Presentation
Day 2-Friday March 16, 2018	
09:30 -10:30	Dr Vijay Dhasmana Ecologist and Conservationist "Rewilding Aravali Biodiversity Parl"
10:30-11:00	Tea

11:00-12:00	Dr. Anjali Sharma Department of Physics, Atma Ram Sanatan Dharma College, University of Delhi "Gas Sensors for environmental monitoring"
12:00-01:00	Oral presentations
1:00-1:45	Lunch

Acharya Narendra Dev College (University of Delhi)

Govindpuri, Kalkaji, New Delhi – 110 019, INDIA

Venue: Conference Hall, Acharya Narendra Dev College

15-17 March, 2018

Scientific Program

(under the aegis of IQAC and Eco-Club 'Paritantra', ANDC)

Day 3-Saturday, March 17, 2018	
09:30-10:30	Mr. Augustine Veliath Founder-Director, Asian Center for Entertainment Education "5 Ps of Sustainable Development"
10:30-11:00	Tea
11:00-12:00	Ms. Lydia Powell Senior Fellow, Observer Research Foundation "Environmental Externalities of Energy Consumption: Global and Local Challenges
12:00-01:00	Dr. Praveen Saxena (Ex-advisor to ministry of MNRE) CEO, Skill Council for green jobs
01:00-01:45	Lunch
01:45-03:00	Valedictory Vote of thanks

Report

01:45-02:45	Mr. Ananda Banerjee Senior Journalist, Livemint "The Great Migration and Sixth Extinction"
02:45-4:30	Oral/Poster Presentations

A Clean environment is considered to be a basic requirement for Human Health and is included by the United nations as one of the Sustainable Development Goals. However, pollution in the Environment continues to pose a significant threat to well being of humans and is a critical issue the world over. Scientific findings indicate urgent need to undertake pre-emptive action as a panacea to control this gigantic problem. Acharya Narendra Dev College took a lead in this Endeavour by holding a three day National Symposium from March 15-18, 2018 on 'Contemporary Environmental Concerns 2018' under the aegis of IQAC and the Eco Club of the college. The main idea behind the symposium was to generate awareness about the rising environmental issues, their assessment, mitigation and socio-cultural aspect. The emphasis was on dwindling public health in wake of the current situation. A good number of undergraduate students, research scholars and teachers from various colleges and Universities participated in the symposium. Many undergraduate students and Ph.D scholars presented their research work in the form of Oral or Poster presentations.

The symposium was inaugurated by the principal of the college, Dr. Savithri Singh. The Key note address was delivered by Dr B C Sabata, Department of Environment, Govt of NCT of Delhi. He motivated the youth to realize the importance of environment and work towards its betterment.
The Director of Vigyan Parisar, Dr R Gopichandran enlightened the audience about article 51 A(H) of the Indian constitution which focuses on Science as a duty of every citizen.

Importance of Sustainable Development was highlighted by Dr Govind Singh, Associate Professor, IP College, University of Delhi. The participants also had the privilege of listening and interacting with Vijay Dasmana, a noted ecologist and conservationist working and reclaiming the Aravali Biodiversity park, Gurugram. He emphasized on the importance of the native species and the importance of restoration work done by him and his team.

Dr Anjali Sharma, ARSD College, University of Delhi spoke on the importance of wearable gas sensors in environmental monitoring and assessment

A senior journalist of the 'Livemint' magazine, Mr Aananda Banerjee spoke about the great migrations and the sixth extinction which is probably occurring because of anthropogenic interference.

Two of our own Associate Professors Dr Manoj Singh and Sumit Sahni presented an elaborate account of Waste Management and Strategies: implications in Indian Scenario. Implications of unsegregated waste disposal and the ever increasing Landfills were discussed

Mr Augustine Veliath, Founder director of Asian center for Environment Education spoke about the 5P's of sustainable development. He encouraged the students to take up the cause of sustainable development.

Ms Lydia Powell, Senior fellow of Observer Research foundation presented a brief account on environmental Externalities of energy consumption- The local and Global challenges of the same.

Dr Praveen saxena, Ex advisor to Ministry of MSME spoke on India's approach towards sustainability.

The three day Symposium was concluded by a Valedictory function where the best Oral and Poster Presentations were awarded and all participants were given a certificate of attendance.

Department of Electronics and Student Chapter at Acharya Narendra Dev College, Universityof Delhi partnered yet again with Brain Mentors Pvt. Ltd. to organize an online workshop focusing on Web Development using the latest industry-ready tools.

Approximately 25 chapter members alongwith other students from different departments joined in to attend the virtual workshop through the online conference portal, Google Meet. The workshop started with cordial greetings and an introduction to Mr. Amit Srivastava, Founder-CEO of

Brain Mentors Pvt. Ltd. Mr. Srivastava went over the introduction and basics of the tools required and the essence and industry necessities for web development.

The workshop went on for 5 days, spanning 2 hours for each session as the students learned the basics of front-end and back-end web designing. The workshop concluded on March 9th with Mr. Srivastava sharing the contact details to help the students with any further queries

Number of Participants: The talk was attended by 86 students from various departments

Department of Electronics and SPIE Student Chapter organized a One-Day Offline Workshop on Holography, instructed by Dr. Sanjay Kumar, Department of Physics, Acharya Narendra Dev College, University of Delhi.

Holography is a technique that enables a wavefront to be recorded and later reconstructed. Holography is best known as a method of generating three-dimensional images. This workshop was held on March 14, 2021 in the SPIE Lab at Acharya Narendra Dev College.

A group of around 69 students participated in it. Students were divided into seven batches, with five in each session.

Each session lasted around 1.5 hours, and a real hologram image was brought out at the end. The hologram was also cut into four pieces and distributed among the students as a token of learning and experience. The sessions were profoundly amazing and real learning.

Number of Participants: The talk was attended by 69 students from various

Department of Electronics under the aegis of DBT STAR College scheme and ANDC SPIE Student Chapter, organized a hands-on workshop on Arduino and Sensor Interfacing intechnical collaboration with industry partner Touch Techno Pvt. Ltd.

Key Learning Objectives included an introduction to Arduino UNO, bitwise operation of gates, controlling the timing and brightness of LEDs, controlling the rotation and speed of servo motors, controlling the sound of buzzers, and Detection of distance using SONAR.

The workshop proved to be highly productive, knowledgeable, and worthy and provided students with an opportunity to learn about the technical world and its future aspects.

Number of Participants: The talk was attended by 58 students from various departments

Digital Transformation and its impact on the future after COVID-19
WEDNESDAY
07
JULY
4:00 to
5:00 p.m.
Dr. Amita Kapoor
ASSOCIATE PROFESSOR
SHAHEED RAJGURU COLLEGE OF APPLIED SCIENCES
Meet : http://meet.google.com/vhf-ikng-stx

An Invited Talk on 'Digital Transformation and its Impact on the Future after Covid-19 was delivered by Dr. Amita Kapoor, Associate Professor, Shaheed Rajguru College of Applied Science cope up on July 07, 2021.

The speaker discussed in detail on how Covid-19 pandemic has forced the world to very rapidly move towards digitization and the kind of impact it will have on the future. In education and academic sector, the teaching and learning process has very quickly shifted to online mode. Teachers as well as students are using innovative techniques and virtual lab tools to cope up in the best possible manner

Participants truly enjoyed this very insightful and informative talk on how to be future ready
in today's time when we are very rapidly moving towards digitisation.

Number of Participants: The talk was attended by 63 students from II and III year of B.Sc.

UNIVERSITY OF DELHI AT ACHARYA NARENDRA DEV COLLEGE

SPIE Student Chapter University of Delhi at
Acharya Narendra Dev College
with DBT STAR College and IQAC
is organizing a
WORKSHOP

CLOUD COMPUTING

A five day Hands-On Workshop with a two hours session each day

Scan QR & register !

Date:
6-9 & 11 Sep.
3:30 P.M. - 5:30 P.M.

The participants will get to learn about :

- Fundamental of Cloud Computing
- Understanding the Core Services of AWS
- Billing and Support Services
- Security Aspects

Teacher Coordinators:
Dr. Amit Garg
Dr. Ravneet Kaur

Student Coordinator:
Ms. Shruti Yadav
(85778 27574)

E-Certificates will be provided after
the successful completion of the workshop

Industry Partner - **Brain Mentors Private Limited**

Cloud computing is the delivery of computing services including servers, storage, databases, networking, software, analytics, and intelligence over the internet (the cloud) to offer faster innovation, flexible resources, and economies of scale. Acknowledging the importance of these services in the current technological world, the SPIE chapter in collaboration with BrainMentors Pvt. Ltd. (industry partner) organized an online workshop on 'Cloud Computing' from September 06-09, 2021 and September 11, 2021 on Google Meet.

The key learning outcomes included: understanding the fundamentals of cloud computing, anintroduction to core services of AWS (Amazon Web Services), billing and support services, and the security aspects of cloud computing. About 50 students participated with enthusiasm and the workshop was highly productive as per the feedback obtained.

Number of Participants: The talk was attended by 50 students from various

Workshop: Career Opportunities in Publishing

Date: February 4, 2022

Faculty Advisor (ANDC SPIE Student Chapter): Prof. Amit Garg

Event Convenor (DBT STAR Coordinator): Dr. Ravneet Kaur

Resource Person: Mr. Sahil Gupta, pulbishingconsultant.in

The world today is consuming media at a rate higher than ever before. Content creation is now a viable career path for aspiring students. But since it is such a new, different and rather diverse fields, many aspirants are justifiably confused as to how they go about to pursue this.

Department of Electronics under the aegis of DBT STAR College scheme and in collaboration with SPIE Student Chapter at Acharya Narendra Dev College, University of Delhi, teamed up with Mr. Sahil Gupta, founder at pulbishingconsultant.in to shed some light at this largely underdiscussed field.

In today's time of smart phones, knowledge of Flutter programming which has become one of the most popular programming language for mobile application development is a must. The workshop was attended by students as well as faculty members of different departments from various colleges. During the five day workshop, the participants were given a very comprehensive understanding of various aspects of flutter programming including: a) Basic Flutter architecture, Flutter and Dart Set-up b) Building simple applications on real device and emulator c) Flutter Navigators & Routes and event handling Integrating Flutter with fire base At the end of the workshop, the participants were able to build simple mobile applications and demonstrate their successful implementation on a real device.

Number of Participants: 13 students from I, II and III year of B.Sc. (H) Electronics participated in the event in the online mode. The complete list of students is given below:

Workshop: Data Science with Python

Date: March 3-7, 2021

Faculty Advisor (ANDC SPIE Student Chapter): Prof. Amit Garg

Event Convenor (DBT STAR Coordinator): Dr. Ravneet

KaurResource Person (Industry Partner): Brain

Mentors Pvt. Ltd. SPIE ANDC Office Bearers & Student

Coordinators

President	Aman Tyagi	B.Sc.(H) Electronics V Sem
Vice President	Shruti Yadav	B.Sc.(H) Electronics III Sem
Secretary	Prahlad Prajapat	B.Sc.(H) Electronics V Sem
Treasurer	Phulender Singh	B.Sc.(H) Electronics V Sem

A five day workshop (with two hours session each day) on implementation of various algorithms of Data Science with Python programming was organized by the department from March 03-07, 2021, under the aegis of SPIE ANDC Student Chapter and DBT Star College Scheme in technical collaboration with industry partner M/s Brain Mentors Pvt. Ltd.

The workshop was found to be very beneficial and informative by all the participants as Data science is emerging as one of the most rapidly growing fields of technology. Extensive hands-on training and exposure was provided to the participants during the five days of the workshop on implementing Data Science algorithms using python programming.

At the end of the workshop, participants got to learn and implement various aspects of data science including:

- Data analysis on Covid-19 and IPL
- Face detection and Recognition
- Face Mask detection using machine learning

An assignment/task was given at the end of each day of the workshop. E-certificates were provided to all the participants who attended all the five days of the workshop and were able to successfully complete the assignments given.

Number of Participants: 31 students from I, II and III year of B.Sc. (H) Electronics participated in the event in the online mode. The complete list of students is given below

Invited Talk: All You Need to Know About Writing a ResearchPaper

Date: Feb 28, 2021

Faculty Advisor (ANDC SPIE Student Chapter): Prof. Amit Garg

Event Convenor (DBT STAR Coordinator): Dr. Ravneet Kaur

SPIE ANDC Office Bearers & Student Coordinators

President	Aman Tyagi	B.Sc.(H) Electronics V Sem
Vice President	Shruti Yadav	B.Sc.(H) Electronics III Sem
Secretary	Prahlad Prajapat	B.Sc.(H) Electronics V Sem
Treasurer	Phulender Singh	B.Sc.(H) Electronics V Sem

On the occasion of National Science Day, SPIE ANDC Student Chapter AND Electronics department organised an illuminating talk on the topic 'All You Need to Know About Writinga Research Paper' on February 28, 2021.

Prof. Amit Garg, Faculty Advisor, SPIE ANDC Student Chapter delivered a very insightful and engaging talk on how to write and present research work in an

effective manner which make suitable for publication

Number of Participants: The talk was attended by 70 students from various departments

DEPARTMENT OF ELECTRONICS

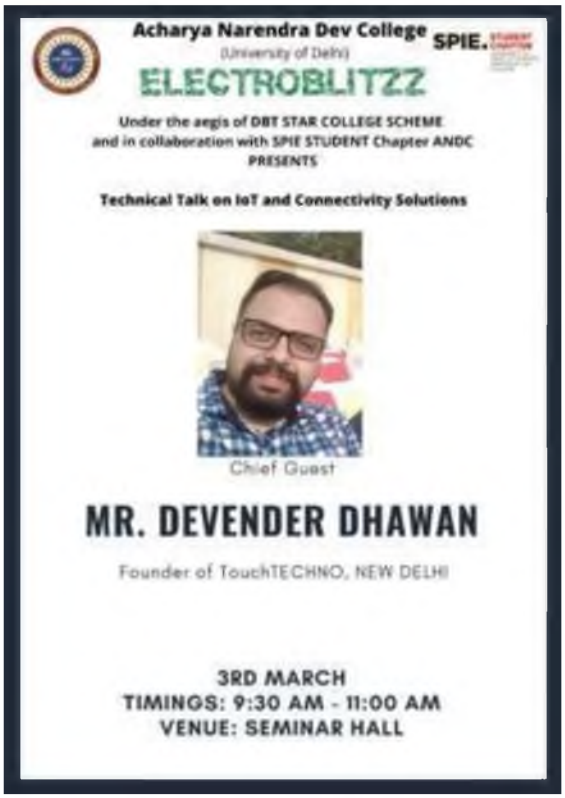
WORKSHOPS & INVITED TALKS ORGANISED BY THE DEPARTMENT(2019-2020)

Invited Talk: IOT and Connectivity Solution

Date: March 3, 2020

Faculty Advisor (ANDC SPIE Student Chapter): Prof. Amit Garg

Event Convenor (DBT STAR Coordinator): Dr. Ravneet Kaur



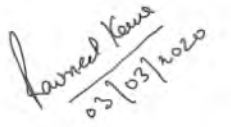
Resource Person: Mr. Devender Dhawan, the founder of „TouchTECHNO" Pvt. Ltd

SPIE ANDC Office Bearers & Student Coordinators

President	Prince Sharma
Vice President	Mallika Yadav
Secretary	Avinash Kumar
Treasurer	Gaurav Lokhna

Department of Electronics in collaboration with the SPIE Student Chapter ANDC and DBT STAR College scheme organised an invited lecture talk on March 3, 2020. The talk was organised as an inaugural event in annual departmental fest „Electroblitzz. Mr. Devender Dhawan, the founder of „TouchTECHNO" and alumni of the college graced the occasion anddelivered a very enlightening talk on „IOT and Connectivity Solution".

He discussed in detail about the recent trends in IOT technology and present challenges with respect to reliable wireless connectivity solutions. The talk was very useful and interactive and generated great interest amongst students in IOT



Technology.

Number of Participants: 79 students from I, II and III year of B.Sc. (H) Electronicsparticipated in the event. The complete list of students is given below

S. No.	Name	Roll No	Course

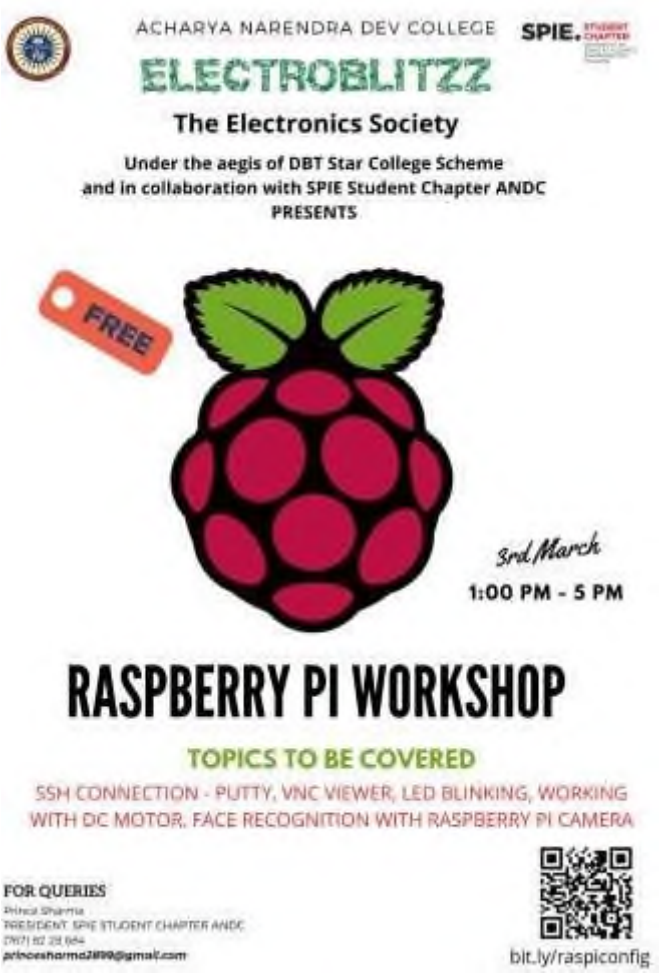
Raspberry Pi Workshop

Date: March 3, 2020, 1:00 p.m. to 5:00 p.m.

Faculty Advisor (ANDC SPIE Student Chapter): Prof. Amit Garg

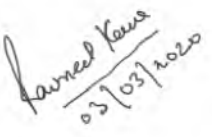


Event Convenor (DBT STAR Coordinator): Dr. Ravneet Kaur

SPIE ANDC Office Bearers & Student Coordinators

President	Prince Sharma
Vice President	Mallika Yadav
Secretary	Avinash Kumar
Treasurer	Gaurav Lokhna

„Electronika" society of the department in collaboration with the SPIE Student Chapter
ANDC and DBT STAR College scheme organised its annual departmental fest



„Electroblitzz" (March 3-4, 2020). One of the major events was „Raspberry Pi" workshop which was organised on 3rd March (day 1 of the fest). The main purpose of the workshop wasto give a general overview about raspberry Pi and also provide hands-on training in designinga simple automation system using raspberry Pi. The workshop was attended with great enthusiasm by students of various departments of the college. The students were able to learn how to use PuTTY (*SSH* and telnet client protocol for windows) and implement simple application such as face

recognition by image processing.

Number of Participants: 41 students from I, II and III year of B.Sc. (H) Electronicsparticipated in the event. The complete list of students is given below:

S. No.	Name	Roll No	Course
1	AASHISH KUMAR	YO-401	B.Sc.(H) Electronics VI Semester
2	ABHAY PATEL	YO-402	B.Sc.(H) Electronics VI Semester

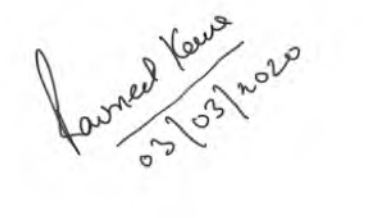
„Electronika" society of the department in collaboration with the SPIE Student Chapter
ANDC and DBT STAR College scheme organised its annual departmental fest

„Electroblitzz" (3rd March to 4th March, 2020). Major highlight of fest was „Robo Race", robotics workshop and competition which was organised on 3rd March (day 1 of the fest). Students from different colleges participated in the event.



There were in total 10 teams, with two students in each team. Each team was provided with a kit containing basic hardware modules required to build a robot. Each of the participating team was asked to assemble the components to build a robotic vehicle. Robotic vehicle was programmed to enable its forward, backward and sideways movement. A fun-filled racing competition was then organised between the robotic vehicles assembled and programmed by participating teams.

Number of Participants: 45 students from I, II and III year of B.Sc. (H) Electronics participated in the event. The complete list of students is given below:

S. No.	Name	Roll No	Course
1	AASHISH KUMAR	YO-401	B.Sc.(H) Electronics VI Semester

Poster/Exhibit Presentation: New Frontiers in Science

Date: October 22, 2019

Patron: Prof. Ravi Toteja (Principal)

Program Coordinators: Dr. Archna Pandey and Dr. Seema Makhija

Program Convenors: Dr. Ravneet Kaur and Dr. Harita Ahuja

Acharya Narendra Dev College under the aegis of DBT Star College Scheme organized a One Day Interdisciplinary Exhibit Presentation on "New Frontiers in Science" in the College premises on 22nd October, 2019. Department of Electronics along with the other departments of the college was actively involved in organising the event.

Various innovative projects of inter-disciplinary nature undertaken by UG students under the following heads were considered for demonstration/exhibition,:

1. Star Projects (2017-2019)
2. ELITE projects (2018-2019)
3. Think Lab (2018-2019)
4. Cube (2018-2019)
5. Extramural projects

Ph.D. students who are registered with the college teachers were also encouraged to present their work.

All the participants were also asked to submit an abstract of the /project/research work they wish to present in the exhibition. After a rigorous review process by the screening committee, 50 projects were shortlisted for poster presentation. The posters/exhibits were judged by subject experts and 3 best projects were rewarded. All the participating students were also awarded certificates of participation.

Total 112 participants presented their research work and projects in the exhibition

13 projects were presented by students of Electronics Department

ELITE project titled „Arduino based Solar Tracking System" presented by Prahlad Prajapat and Ankita Shukla, B.Sc.(H) Electronics III Sem won the BEST PAPER PRESENTATIONaward.

Other Student Coordinators:

Aqil Ali B.Sc.(H) Electronics (VI Sem)

A hands-on workshop on „Arduino" was organized by Department of Electronics under the aegis of DBT Star College scheme and in collaboration with ANDC SPIE Student chapter to familiarise the students with programming and designing of systems using arduino The basic purpose of the workshop was to give a general overview about the basics of programming with Arduino, building an Arduino Instant Messenger and implement simple automated systems such as weather station, disco light and ultrasonic radar. The event witnessed great enthusiasm and curiosty amongst the participants. Students came up their own ideas and tried to realise it. It was attended by over 100 students of various departments.

SPIE ANDC Student Chapter (Workshop): Optical Color Mixing

Date: August 9, 2019

Faculty Advisor (ANDC SPIE Student Chapter): Prof. Amit Garg

Event Convenor (DBT STAR Coordinator): Dr. Ravneet Kaur

SPIE ANDC Office Bearers

President	Prince Sharma
Vice President	Mallika Yadav
Secretary	Avinash Kumar
Treasurer	Gaurav Lokhna

Other Student Coordinators:

Hardik Minocha B.Sc.(H) Electronics (V Sem)

Optical Color Mixing Workshop cum introductory session was organized to give newly joined members of the SPIE society an idea about the recent trends and development in the field of „Optics". A team of SPIE student members led by Mr. Hardik Minocha, gave theoretical explanation of Colors and emphasized on the difference between Optical and Pigment Colors. Students were given the practical overview of how Red, Green and Blue are mixed together to generate different colors. It was attended by 110 students of various departments.

Workshop: NI LabVIEW Online Basic Training

Date: June 23-27, 2020

Faculty Advisor (ANDC SPIE Student Chapter): Prof. Amit Garg

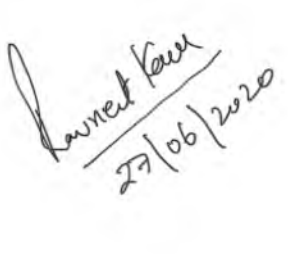
Event Convenor (DBT STAR Coordinator): Dr. Ravneet Kaur

SPIE ANDC Office Bearers

President	Prince Sharma
Vice President	Mallika Yadav
Secretary	Avinash Kumar
Treasurer	Gaurav Lokhna

Resource Person: Mr. Devender Dhawan, the founder of „TouchTECHNO"

Department of Electronics under the aegis of DBT Star College scheme and in collaboration
with ANDC SPIE Student chapter and industry partner „Touch Techno Pvt Ltd", organised a



five day hands-on workshop in the online mode on „NI LabVIEW" to familiarise the studentswith virtual instrumentation using NI LabVIEW from June 23-27, 2020.
Number of Participants: 67 students from I, II and III year of B.Sc. (H) Electronicsparticipated in the event. The complete list of students is given below:

S. No.	Name	Roll No	Course
1	AASHU KUMAR	AB-401	B.Sc. (H) Electronics II Sem
2	ADITI	AB-402	B.Sc. (H) Electronics II Sem

Technical Talk and Interaction
with

Prof. Marija Strojnik

Astrophysicist and Distinguished Professor, Optical Research Center
Leon, Gto., Mexico

(Date- 15th October 2019, Venue- Seminar Hall)

9:15 a.m. – 10:00 a.m.	Registration
10:00 a.m. – 10:15 a.m.	Welcome and Lamp Lighting Welcome address **Dr. Ravi Toteja** Acting Principal, Acharya Narendra Dev College Inaugural address **Dr. Arijit Chowdhuri** Faculty, Department of Physics
10:15 a.m. – 11:30 a.m.	**Lecture on Autonomous Navigation with Intelligent Camera for Space and Earth** **Prof. Marija Strojnik**
11:30 a.m. – 11:45 a.m.	**Tea break**
11:45 a.m. – 1:00 p.m.	**Motivational Interactive Session with Women Students** **Prof. Marija Strojnik**
1:00 p.m. – 1:05 p.m.	Vote of Thanks- **Mr. Prince Sharma**, President, SPIE Student Chapter Memento- SPIE Student Chapter Office Bearers
1:05 p.m. – 2:00 p.m.	Project Exhibition by SPIE Students (Venue: Department of Electronics)
2:00 p.m. – 3:00 p.m.	Guest Lunch

Prof. Marija Strojnik, Astrophysicist and Distinguished Professor at Optical Research Center, Mexico delivered a very insightful talk on Autonomous Navigation System with Intelligent Camera for Space and Earth'

Invited Talk: Current trends in Mobile Application Development

Date: September 20, 2018

Event Convenor (DBT Corodinator): Dr. Ravneet Kaur

Resource Person: Mr. Rohit Gambhir, Lead, Mobile Application Development, QA Infotech

Department of Electronics, under the aegis of DBT STAR College Scheme, organized an inaugural lecture on 20th September, 2018. Mr. Rohit Gambhir, was the key speaker of the function. Mr. Rohit Gambhir is an alumnus of our college and currently the Lead in Mobile Application Development at QA Infotech. He delivered an informative talk on **'Current trends in Mobile Application Development'**. The students were able to learn about Mobile Application Development and some upcoming Applications.

The talk was followed by an interactive session where students queries where answered. Since the speaker was an alumnus of the college, he was also able to share some memories and experience with students.

ACHARYA NARENDRA DEV COLLEGE

(University of Delhi)

NAAC accredited 'A' grade

Department of Electronics

(under the aegis of DBT STAR College scheme)

cordially invites you to a lecture by

Mr. Rohit Gambhir

Lead, Mobile Application Development, QA Infotech

On

Current Trends in Mobile Application Development

Date: 20th September, 2018 (Thursday)

Time: 9:30 A.M.

Venue: College Conference Hall

Number of Participants: 85 students from I, II and III year of B.Sc. (H) Electronicsparticipated in the event. The complete list of students is given below

S. No.	Name	Roll No	Course
1	AASHU KUMAR	ZO-401	B.Sc. (H) Electronics (I Sem)

Invited Talk: Professional Conduct with Positive Attitude

Date: October 4, 2018

Event Convenor (DBT Corodinator): Dr. Ravneet Kaur

Resource Person: Ms. Anju Kumari, Motivational Speaker and Life Skills Trainer, Founder of Crafting Leaders

Department of Electronics organized an invited talk, under the aegis of DBT STAR Scheme, on October 4, 2018. Ms. Anju Kumari was the key speaker of the function. Ms. Anju Kumari is Motivational speaker and life skills trainer. She is also the Founder of Crafting Leaders. She delivered an inspiring talk on „Professional conduct with positive attitude". The speaker interacted with the students and involved them in various confidence boosting activities. She was also able to guide the students in improving their decision making skills and having a more positive outlook towards life.

Number of Participants: 71 students from I, II and III year of B.Sc. (H) Electronics participated in the event. The complete list of students is given below

S. No.	Name	Roll No	Course
1	AASHU KUMAR	ZO-401	B.Sc. (H) Electronics (I Sem)

Invited Talk: Satellite Communication

Date: January 31, 2019

Event Convenor (DBT Coordinator): Dr. Ravneet Kaur

Resource Person: Prof. Mridula Gupta, Department of Electronics, University of Delhi, South Campus

Department of Electronics organized an invited talk, under the aegis of DBT STAR Scheme, on January 31, 2019. Professor Mridula Gupta from Department of Electronics, University of Delhi, South Campus was the key speaker of the function. She delivered an insight talk on "Satellite Communication". The talk was attended by around 68 students from various courses from our college. Through her talk she was able to enlighten the students about various aspects of Satellite Communication. The talk was followed by an interactive session with the students, where students queries were answered.

Induction Workshop (SPIE ANDC Student Chapter)

Date: September 25-26, 2018

Faculty Advisor & Resource Person: Prof. Amit Garg

Office Bearers & Student Coordinators

President	Rohit Saini	B.Sc. (H) Electronics (VI Sem)
Vice President	Chiradeep Das	B.Sc. (H) Electronics (VI Sem)
Secretary	Ritesh Raj	B.Sc. (H) Electronics (VI Sem)
Treasurer	Hardik Minocha	B.Sc. (H) Electronics (IV Sem)

Induction Workshop: - A two-day Induction Workshop was held from September 25-26, 2018 for SPIE members. The workshop had an invited talk by Prof. Joby Joseph, Department of Physics, IIT Delhi on the topic of "Fabrication of Nanophotonic Structures and some Applications". Hands-on sessions were conducted during the workshop on projects like Water drop Microscope, Communication through Fiber-Optic cables, Laser Spirograph, Lissajous light patterns through vibration and Holography. Dr. Sanjay Kumar, Department of Physics was the resource person in setting up and recording the holograms. The workshop convener was Dr. Amit Garg.

Number of Participants: 158 students across different courses in the college participated inthe event.

Python Workshop (SPIE ANDC Student Chapter)

Date: April 3, 2019

Faculty Advisor & Resource Person: Prof. Amit Garg

Resource Person: Mr. Jatin Katyal, Python Mentor, Coding Blocks

Office Bearers & Student Coordinators

President	Prince Sharma
Vice President	Mallika Yadav
Secretary	Avinash Kumar
Treasurer	Gaurav Lokhna

A workshop on „PYTHON" was organized in association with, industry partner Coding Blocks for the students of Electronics on April 3, 2019, 1 p.m. to 3 p.m.

CodingBlocks is an online training institute which offers programming and software related courses like Java, C++, Android, NodeJS and more. 70 students from different courses registered for the workshop. The resource person, Mr. Jatin Katyal, python mentor on behalf of Coding Blocks provided basic knowledge about programming in python

DEPARTMENT OF ELECTRONICS

WORKSHOPS & INVITED TALKS ORGANISED BY THE

DEPARTMENT(2017- 2018)

Invited Talk: A Preface into Wireless Communication and Electronic Warfare

Date: January 29, 2018

Event Convenor (DBT Coordinator): Dr. Ravneet Kaur

Resource Person: Mr. Sourabh Basu, Scientist/Engineer 'SE', at ISRO Satellite Centre, Bangalore

Department of Electronics, under the aegis of DBT STAR College Scheme and on the occasion of annual departmental festival 'Electro Blitz' organised a very informative talk on '**A Preface into Wireless Communication and Electronic Warfare**' on January 29, 2018 which was delivered by Mr. Sourabh Basu, Scientist/Engineer 'SE', at ISRO Satellite Centre,

The speaker also interacted with the students and answered their queries which furtherenriched their knowledge on the topic. The talk was followed by various interactive events like Mini Militia, Mobile Legends, Pac Man by Robots and Electronics Jingle competition which was organised by 'Electronika', student society of Electronics department

Title- The Trending Economic and Business Related Issues

Date- September 27, 2017

Organizing Committee - Department of Commerce, ANDC.

Report

A seminar related to "The Trending Economic and Business related issues" was conducted by the Department of Commerce of Acharya Narendra Dev College on 27 September 2017 inviting CA Rajeev Talwar as the speaker. Various challenges such as Crowdfunding, Impact of Demonetization on businesses and GST, etc. had been highlighted in the event. The session was extremely enlightening from the point of view of students especially for those who were planning to pursue entrepreneurship in future.

Title- Lets Talk Session on "Stock Markets"

Date- January 17, 2020

Organizing Committee – Department of Commerce, ANDC

Report

A session on "stock markets" was organised on 17 January 2020 conducted by the Department of Commerce in the seminar hall of Acharya Narendra Dev College to give the students an insight into stock markets as it has been a trending topic for all age groups, especially among the teenagers. Mr. Neeraj Arora was the eminent speaker throughout the event. It was conducted to help students acquire knowledge about the topic as many didn't have prior experience. The motive was also to have a conversation with those who have already worked on it. Students were made aware of the trading terms like mutual funds, investments, derivatives, forex etc.

Report

"Job vs. Career" by CA Pankaj Goel

A webinar was organised on 'Job vs. Career' with CA Pankaj Goel on August 27, 2020 by the department of Commerce. He described everything with several real-life examples to make a better understanding amongst everyone. He explained the importance of finishing our education and setting our targets before applying for jobs and starting earning. He also informed us about various career opportunities that could be pursued after doing different courses and gave us a wide variety of advice regarding the process of choosing the right path for the future. He stressed more on having greater knowledge and pursuing various courses rather than going for a job and starting earning right away. Audience was given a platform to ask their career related questions or any other problem regarding the webinar. It was an eye opener event for the audience as they received solutions to their problems in very less time. It was an enriching experience for everyone present.

Report

"Top Trends Driving Digital Marketing Strategies" By Dr. Ruchi Gupta

With the increasing significance of Digital Marketing, a webinar by Dr. Ruchi Gupta was organised on the topic "Top Trends Driving Digital Marketing Strategies" via Google Meet on October 9, 2020 by the department of Commerce, Acharya Narendra Dev College (University of Delhi). A multimedia presentation was parted explaining digital marketing and the practical approach to engage the audience. She emphasised on the pace of increasing digitisation and how it helps in growing as an influencer. She explained the concept of micro-celebrity as a micro-influencer who is a person famous within a niche group of users on a social media platform. Micro-celebrities often present themselves as public figures. The webinar was very enlightening.

Title- Webinar on "Insurance for Youth"

Date- November 6, 2020

Organizing Committee

Patron- Dr. Ravi Toteja (Officiating Principal)

Teacher in Charge- Dr. Shalu Mahajan

Convenor – Ms. Sangeeta Relan

Co-Convenor- Dr. Jitender Goel

Student Coordinators- Ms. Tanya Gupta and Ms. Vaishali Bharadwaj

Report

"Insurance for youth" by Mr Rajesh Relan

The Department of Commerce of the college hosted a webinar on the topic 'Insurance For Youth' via google meet. The resource person was Mr. Rajesh Relan (Former C.E.O of PNB met life insurance). The interactive session was aimed at putting light on the importance of considering insurance as a prospective investment. The guest discussed the benefits of insurance and also how it offers a promising career. All the points which he highlighted can indeed benefit the youth of today. The session turned out to be an interactive one.

Co-Convenor -Dr. Jitender Goel

Student Coordinators- Ms. Teesha Rautela and Mr. Aditya Prakash

Report

"E-Filing of ITR1 Workshop" by Dr Surinder Kaur and CA Yask Sain

With the objective of initiating people towards e filing of return, a webinar on was organised on "E-Filing of ITR1 Workshop" November 10, 2020. The webinar followed a two way approach. On one side, the participants were introduced to the process of e filing of returns and other relevant provisions through presentation slides showing step by step procedure of e filing of returns. This made participants comfortable with the Income Tax website and how they can move from one step to another. This was followed by actual filing of returns on the Income Tax India website during the webinar and online payment of taxes. The webinar was a great success and ended with the Q&A session between the resource persons and the audience.

Title- Webinar on "How to Publish Research Papers in Scopus/ Indexed Journals?"

Date- December 12, 2020

Organizing Committee members

Patron- Dr. Ravi Toteja (Officiating Principal)

Convenor - Dr. Sandeep Kumar Goel

Co-Convenor - Dr. Surinder Kaur

Teacher in Charge- Dr. Shalu Mahajan

Student Coordinators- Ms. Mansi Malpani and Ms. Payal Kumari

Report

"How to Publish Research Papers in Scopus/ Indexed Journals?" By Prof. Amit Kumar Singh

Besides writing a good research paper, it is equally important to get the work published in the right journals as it gives academic satisfaction and a sense of recognition. It is also crucial for exchange of ideas globally, fostering community networks, acquisition of research funding, advancement in career. It allows you to become an effective communicator. Therefore a webinar was organised on "How to Publish Research Papers in Scopus/ Indexed Journals?" on December 12, 2020. The webinar threw light on various categories of research journals and their relative importance in academics. Participants were guided through a step by step approach on how to go about for publication in good journals and challenges associated with these.

Title - Webinar on "An Overview of Indian Contract Act, 1872"

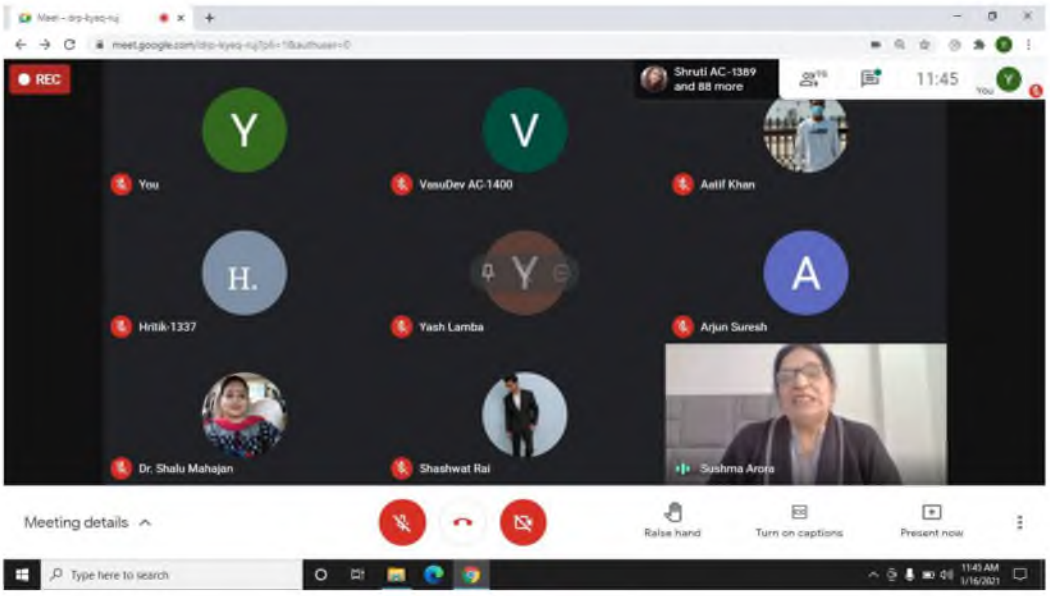
Date- January 16, 2021

Organizing Committee

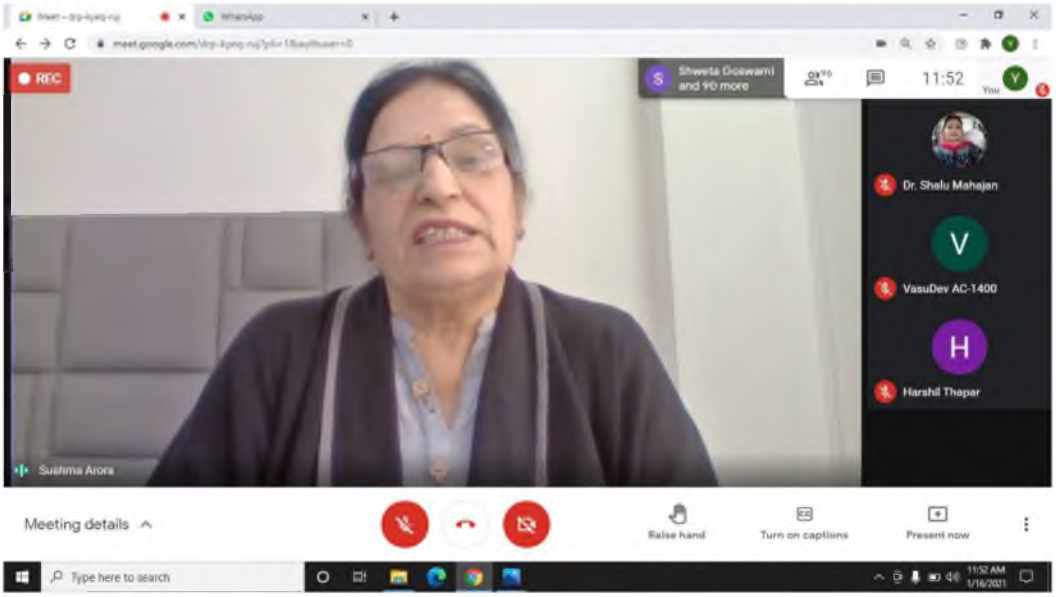
Patron- Dr. Ravi Toteja (Officiating Principal)

Convenor- Dr. Shalu Mahajan

Co-convenor- Dr. Jitender Goel



Student Coordinators- Ms. Pratishtha Bisht and Ms. Teesha Rautel



Report

"Indian Contract Act" by Dr. Sushma Arora

A webinar on the Indian Contract Act 1872 was organised exclusively for the first-year students of the department January 16, 2021. It was conducted by Dr Sushma Arora, Associate Professor, Daulat Ram College, University of Delhi. The webinar was extremely informative and enlightening. The speaker spoke on various relevant topics such as Lawful consideration, Acceptance of contract. Enforcement of contracts as well as the concept of Free consent. She explained the topics by giving examples and case studies which made her talk interesting and engaging. The students also got an opportunity to ask questions and get their doubts clarified.

Title - Talk under the first series "In Conversation with our Alumni" on "Early Investment- Secured Future"

Date- January 28, 2021

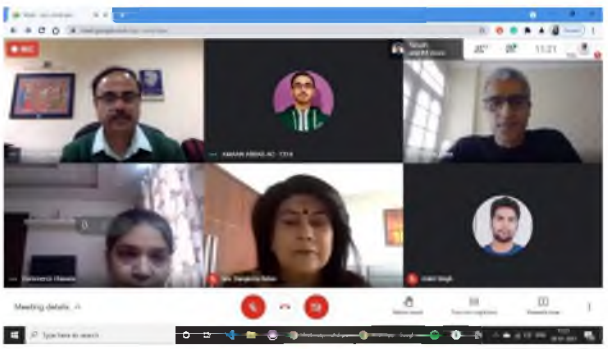
Organizing Committee

Patron- Dr. Ravi Toteja (Officiating Principal)

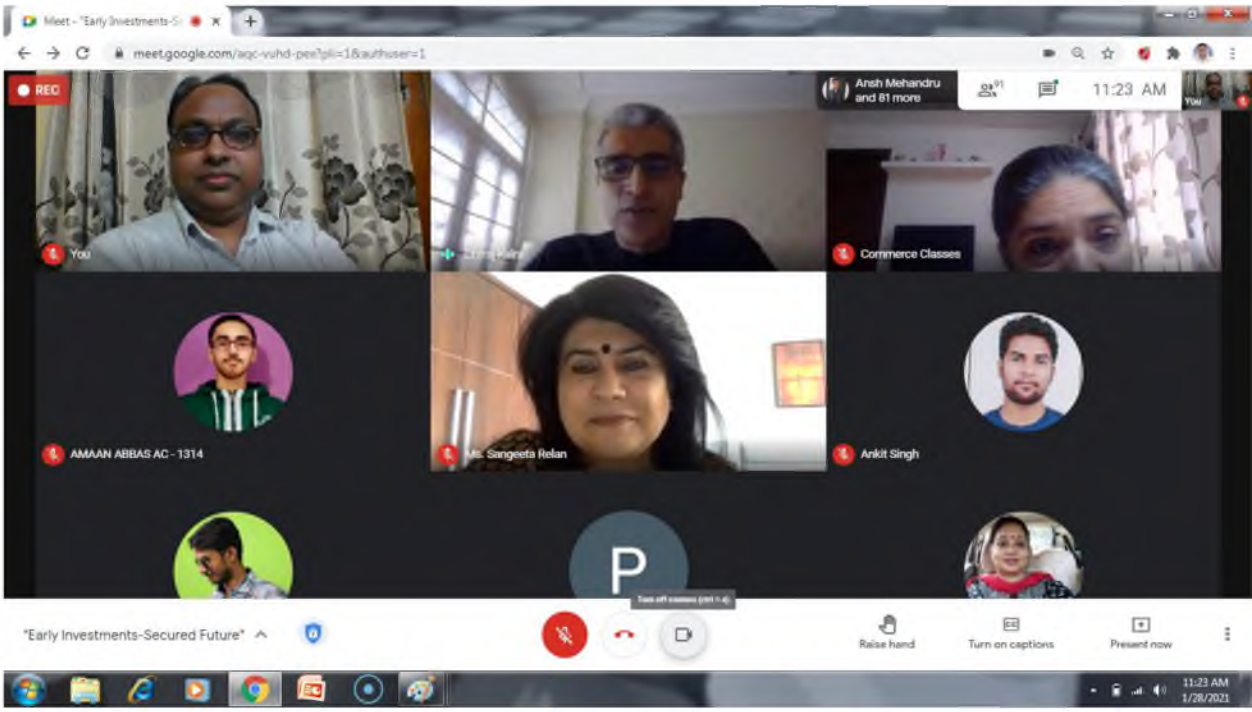
Teacher in Charge- Dr. Shalu Mahajan

Convenor - Dr. Surinder Kaur

Co-Convenor- Ms. Sangeeta Relan



Student Coordinators- Mr. Ankit Kumar and Ms. Niharika Gupta



Report

In Conversation with our Alumni: Mr Dhiraj Kalra (Batch 1996)

The department of Commerce organised its first event and laid the foundation of the series "In Conversation with our Alumni on January 28. 2021. The first Guest in this series was Mr Dhiraj Kalra from the 1996 batch currently working as a Senior Director of Operations at Paisabazaar. He was invited to talk on a highly engaging topic "Early investment- Secured future". The event started with the introduction of newly elected council members of Bodhini through a very intriguing video. After this. Prof. Ravi Toteja, the Officiating Principal welcomed the Guest and graced the occasion with his kind words. Subsequently. Principal Sir, the honourable Guest and Chief editor Dr Surinder Kaur unveiled the newly made Brochure of the Commerce Department. Then the Convenor of the series. After this. Mr Dhiraj took charge and gave us his fruitful insights on the topic by sharing his own experiences and guiding us through his prepared presentation. He very precisely explained the importance of early investment for youngsters like college students Furthermore, there was a live Q/A session with our resource person who cleared the doubts of the participants. The guest was facilitated with the Digital memento as a token of appreciation to the guest. The moment was a bit nostalgic as it was a formal vote of thanks and a reunion of a teachers with the old student.

Title- Two week (online) Interdisciplinary FDP on "From Research to Publication" jointly organized by Department of Commerce, Acharya Narendra Dev College and Mahatma Hansraj Faculty Development Centre, Hansraj College, University of Delhi

Date- April 5-17, 2021

Organizing Committee

Patron- Dr. Ravi Toteja (Officiating Principal)

Convenor- Dr. Surinder Kaur

Co-convenor- Dr. Shalu Mahajan

Member- Dr. Jitender Goel

Member- CA Yask Sain

Report

Two-week long online Faculty Development Programme on "From Research to Publication" 5th April -17th April 2021

The two-week long online Faculty Development Programme on "From Research to Publication" from 5th April -17th April 2021 was organized by the Department of Commerce, Acharya Narendra Dev College. University of Delhi, in association with Hansraj College and the core team of Mahatma Hansraj Faculty Development Centre- Dr Jyoti Bhola, Mr Ashutosh Yadav, Mr Gaurav Bhatt and Mr Amit Chauhan under the aegis of Pandit Madan Mohan Malviya National Mission on Teachers and Teaching. Acharya Narendra Dev College FDP team comprised of Dr Surinder Kaur as its Convener and Dr Shalu Mahajan as coordinator and Dr Jitender Goel and CA Yask Sain from the Department of Commerce as its members, who ensured that the entire programme was carried out smoothly in an seamless manner.

The Inaugural Session was held on 5th April 2021 at 1:00 p.m. Dr Surinder Kaur, Convener of the FDP, welcomed the guests and the participants. The topic of the FDP was introduced and the significance and objectives of the programme were outlined. The session opened with the welcome address delivered by Prof. Ravi Toteja, Chief Patron of the FDP and Officiating principal of ANDC. Prof. Toteja spoke on the increasing relevance of research and publication in the wake of the new education policy (NEP). Prof. Syed Mohd. Anwar Alam. Guest of Honor and chairman of the Governing Body. ANDC also addressed the session and spoke on the relevance of research and publication in the life and career of an academician.

Prof. Suman Kundu. Director. University of Delhi South Campus presided over the inauguration session and delivered the keynote address in the session as well. He highly appreciated the list of topics such as research philosophy, types of research, research methods, analysis and interpretation of data, research paper structure, ethical issues in research and role of mentor included in the FDP and found these highly relevant in the journey of research to publication.

Over 120 participants from across the country attended the two-week programme. Every day there were two sessions of one-hour duration. 24 eminent speakers were invited to discuss a wide array of topics related to the Sampling criteria, Hypothesis Testing, R tool, Research methods, design and problems. How to construct Questionnaire and conduct interviews, Interpretation of data, Research paper Structure, Report Writing, Plagiarism Check and role of mentor.

Report

"An Insight into Currency Derivatives" by Ms. Sugandha Sachdeva, the Vice President of Commodities and Currency Research at Religare Broking Limited

The Department of Commerce, in collaboration with Internal Quality Assurance Cell. AND organized a webinar on "An Insight into Currency Derivatives" on September 11. 2021. The resource person for the event was Ms. Sugandha Sachdeva, the Vice President of Commodities and Currency Research at Religare Broking Limited". The Webinar was extremely illuminating and educative. The speaker verbalised various pertinent topics like Future Contracts, International Finances, Stock Market, Derivatives Market and other relevant concepts. Furthermore, the speaker also presented several research reports. Certificate of participation was provided to all the attendees of the webinar. The esteemed guest speaker also released the second edition of the semi-annual Newsletter of the Department of Commerce "The Chronicles". It was more of an interactive session with the students. The students got an opportunity to clear their doubts and a platform to ask questions and share their ideas related to currency derivatives. The whole session was really captivating and absorbing.

Title- Career Opportunities in MNCs

Date- October 9, 2021

Organizing Committee

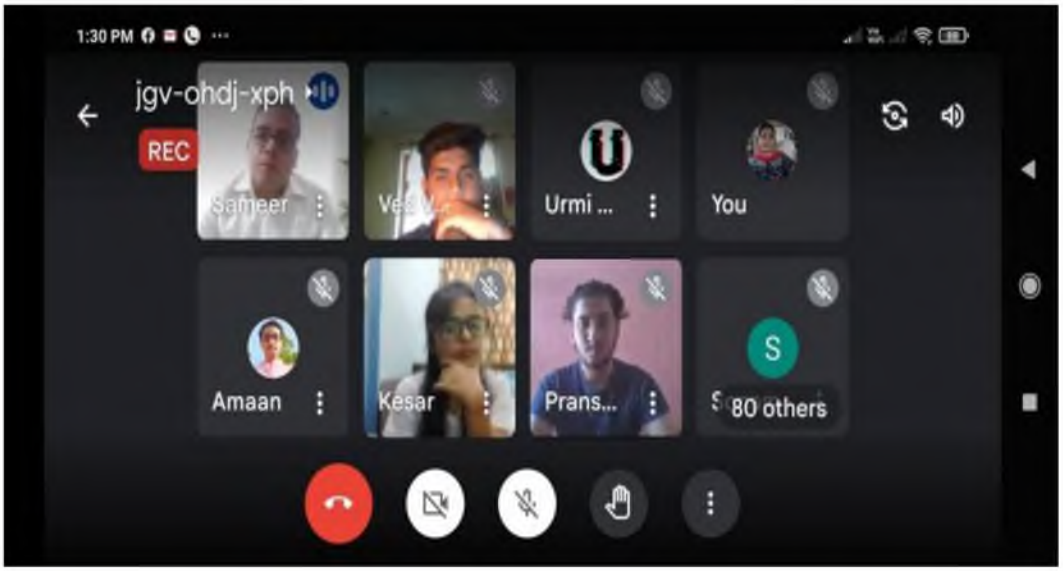
Patron- Dr. Ravi Toteja (Officiating Principal)

Teacher in Charge- Dr. Shalu Mahajan

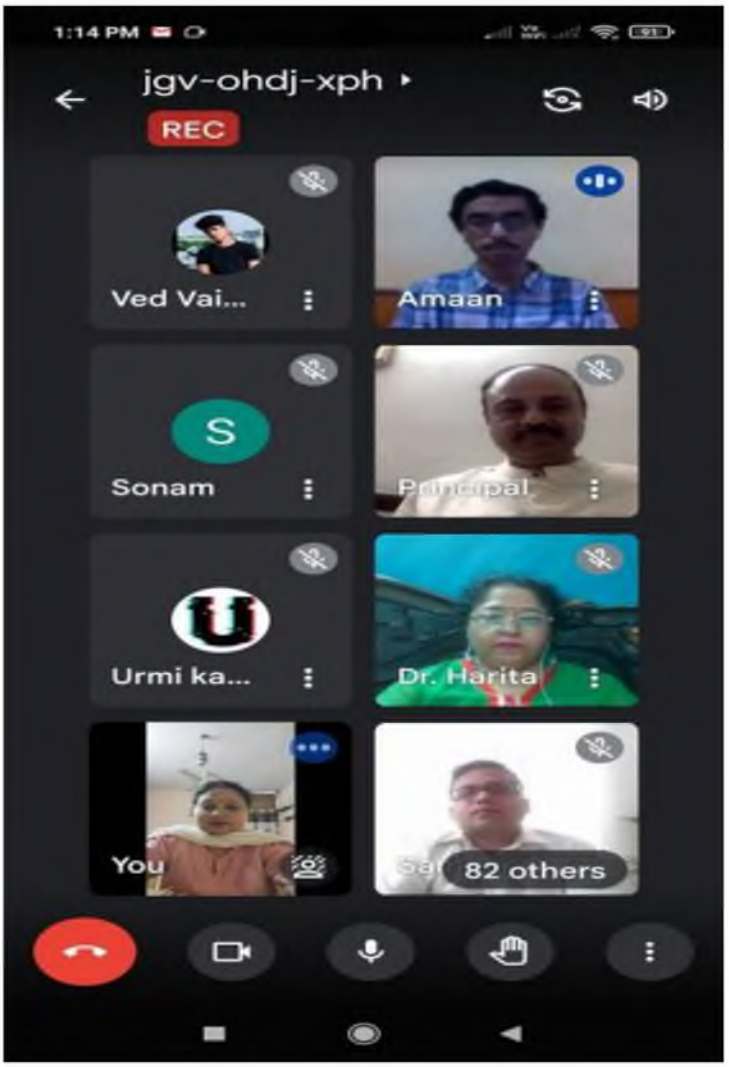
Convenor IQAC- Prof. Sarita Kumar

Convenor- career counselling & placement cell- Dr. Harita Ahuja

Student Coordinator Mr. Ved Vaibhav Deo



Report



"Career Opportunities in MNCs" by CA Sameer Mahajan, Vice President at controller's Division, Goldman Sachs

An interactive session on Career Opportunities in MNC Banks was taken by Guest Speaker CA Sameer Mahajan who is Vice President at Controller's Division, Goldman Sachs. The webinar was conducted on 9th October 2021 at 1 PM on Google Meet platform. The webinar was conducted by Training Learning and Placement Cell of the Department of Commerce in collaboration with IQAC. Career counselling and Placement Cell of Acharya Narendra Dev College. The webinar was hosted by Amaan Abbas, the event commenced with unveiling the logo of Training Learning and Placement Cell and Mr Ravi Toteja, officiating principal of ANDC expressed his views on the occasion. Professor Sarita Kumar, convener of the internal quality assurance cell spoke a few words and appreciated the efforts of TLPC in the areas of participation and opportunities they are providing. Dr Harita Ahuja, Convener of Career Counselling and Placement cell of the college delivered a small speech on how the cell will help the commerce department students. CA Sameer Mahajan started the webinar and talked about MNC Banks and gave a good insight about the opportunities available there. He talked about operations, technology and accounting and taxation and opportunities for various professionals like Chartered Accountant, Company Secretary, lawyers and MBA's etc in these fields. At the end CA Sameer Mahajan answered the queries of the participants and the cell gave gratitude to him. There were more than eighty participants in the meet and many were

attending the webinar from YouTube live. Every participant felt enlightened by attending the webinar.

Title Workshop on "Ace Canva"

Date- February 04-06, 2022

Organizing Committee

Department of Commerce

Student Coordinators- Ms. Malika and Mr. Amandeep

Report

Ace Canva by Dr Surinder Kaur and Mr Ayush Goyal

Bodhini, the Commerce Society of Acharya Narendra Dev College organized various programs and events throughout the academic session 2021-22 with a motive to nourish students' knowledge and intellectual growth. The year 2022 commenced with a workshop series titled Ace the Skill Week to augment the students' performance in a particular skill. Under this program, the first skill considered was Canva, a design software built to create posters. presentations. videos. etc. It was a 3-day webinar held from 4th-6th February 2022 conducted by the joint secretary of Bodhini (2021-2022), Mr. Ayush Goyal. Students from various colleges registered and enthusiastically participated in the skill development course. The webinar covered the basics at the beginning and reached the advanced level in the fullness of the time. E-certificates were provided to all the participants as a token of encouragement. The team of Bodhini feels proud to organize such a successful event and would like to convey thanks to the principal and management for their timely advice and cooperation.

Title - Workshop on "Ace Excel"

Date- March 07-09, 2022

Organizing Committee

Department of Commerce

Student Coordinator- Ms. Anshika and Mr. Kartik

Report

"Ace Excel" by Dr Shalu Mahajan and Mr. Tarush Bajra

Bodhini AERC, the Commerce Society of Acharya Narendra Dev College organized an insightful and comprehensive offline workshop on MS Excel under the academic ambit of "Ace the Skill Week". Mr. Tarush Bajra, member of the Bodhini (2021-2022) core committees, led the three-day workshop that took place from 7th March 2022 to 9th March 2022 in the Seminar Hall. The workshop began with an explanation of the prerequisite understanding of Microsoft Excel and its significance in the modern corporate environment. The technical capabilities and operations of MS Excel were then explained, followed by a brief review of the overall concept before moving on to the advanced features and procedural elements of MS Excel. The doubts of the students were embraced cheerfully and attended to at the end of every session by the chair. Besides, the participants were conferred e-certificates as well. The workshop was flooded with a series of positive and appreciative feedback from the students and faculty members, turning it to be a massive success.

Title - Alumni series on "career options after graduation"

Date- April 01, 2022

Organizing Committee

Patron- Dr. Ravi Toteja (Officiating Principal)

Convenor -Dr. Surinder Kaur

Co-Convenor -Ms. Sangeeta Relan

Teacher in Charge- Dr. Shalu Mahajan

Student Coordinators- Mr. Ankit Kumar and Mr. Yash Lamba

Report

"Career Options after Graduation" by Mr. Nitin Deveshwar, founder of Mantec India Securicor Pvt. Ltd and alumni of the batch of 2001

Students of Acharya Narendra Dev College got an opportunity to attend an extensive and informative session of the series 'In Conversation with our Alumni' on Career options after Graduation on April 1, 2022. The speaker for the session was Mr. Nitin Deveshvar, founder of Mantec India Securicor Pvt. Ltd and alumni of the batch of 2001, Acharya Narendra Dev College. In this session, Mr. Nitin made the students aware of the wide range of employment opportunities available after graduation. He also talked about his life experiences and the road he took to build such a well-known business. In addition to it, he patiently resolved every query the students had. Thereafter, the semi-annual newsletter was unveiled by the respected speaker and he was given a memento and a copy of the newsletter. The event was a huge success because of the hard work of team Bodhini and the cooperation of everyone associated with it.

Report

"Ace Google" by Dr. Jitender Goel and Mr Ankit Kumar

As a part of the 'ACE THE SKILL WEEK workshop series, Bodhini, The Commerce Society of Acharya Narendra Dev College organized a virtual workshop on google workspace on the 7th and 8th of April, 2022. The objective was to make the participants aware of the best tools for communication, collaboration, security and organization. The workshop commenced with inspiring words by our resource person, Dr. Jitender Goel and Mr Ankit Kumar, president of Bodhini The session equipped the students with the knowledge of essential software tools like Google Sheets, Google Docs. Google Forms, etc. The advantage of applying these tools in the real world was also made clear. The students were able to gain practical knowledge from the speaker's experience. Participants were also provided with e-certificates; it was truly an interactive insightful and enlightening session.

Convenor-IQAC- Dr. Sada Nand Prasad

Report

Application of Cost Accounting Standards" by Prof. Rajiv Kumar Goel, Delhi College of Arts and Commerce

The Department of Commerce in collaboration with the Internal Quality Assurance Cell ANDC, organized a workshop on "Application of Cost Accounting Standards in the preparation of cost statement" on 20th April 2022 to familiarize students with the preparation of cost sheets in accordance with Cost Accounting Standards. The resource person for the workshop was Prof. Rajiv Kumar Goel from Delhi College of Arts and Commerce, University of Delhi. In this workshop, Mr. Rajiv covered the relevance of Cost Accounting standards while preparing the cost sheet along with an explanation of the difference between financial statements and cost sheets. Further, he shared the format of a cost statement with the students and gave them some questions for practice. The students were also highly interactive during the entire session. The workshop ended with a vote of thanks.

DEPARTMENT OF PHYSICS

ACHARYA NARENDRA DEV COLLEGE

(University of Delhi)

NAAC accredited 'A' grade

Department of Physics

(under the aegis DBT STAR College scheme)

is privileged to host

Dr. Soumya Mitra

Senior Scientist II, Abbvie Bioresearch Center, Worcester, MA, USA

Former faculty at University of Rochester, Rochester, NY USA

The Department cordially invites all students and colleagues to an interactive session on

"Applications of Biomedical Imaging in Drug Discovery and Treatment Monitoring"

Date: 26 September 2017 (Tuesday)

Time: 1.30 p.m.

Venue: College Conference Centre

Event Photographs

Report

Dr. Soumya Mitra is a Senior Scientist – Grade II, Abbvie Bioresearch Center, Worcester, MA, USA and a former faculty member at University of Rochester, Rochester, NY, USA. He delivered a talk titled "Applications of Biomedical Imaging in Drug Discover and Treatment Monitoring". The talk mainly focused on how molecular imaging has advanced in recent years from providing just anatomical and physiological information to more functional information on disease targets and drug kinetics. This progress has been driven by integrated and innovative research in imaging, sensor technology, miniaturization techniques, chemistry and computer modeling amongst many other subjects. These new advances, particularly in the area of optical molecular imaging, have enabled translation of preclinical findings in cells and animal models to the clinic. Optical imaging is proving to be an attractive imaging modality for drug development as it allows transition of research from bench to bedside without carrying the radioactivity concerns associated with nuclear imaging modalities such as PET or SPECT. SPECT (Single Photon Emission Computed Tomography) is a diagnostic imaging technique used in nuclear medicine to detect and visualize functional abnormalities in organs and tissues. SPECT is particularly useful in imaging the brain, heart, bones, and other organs.

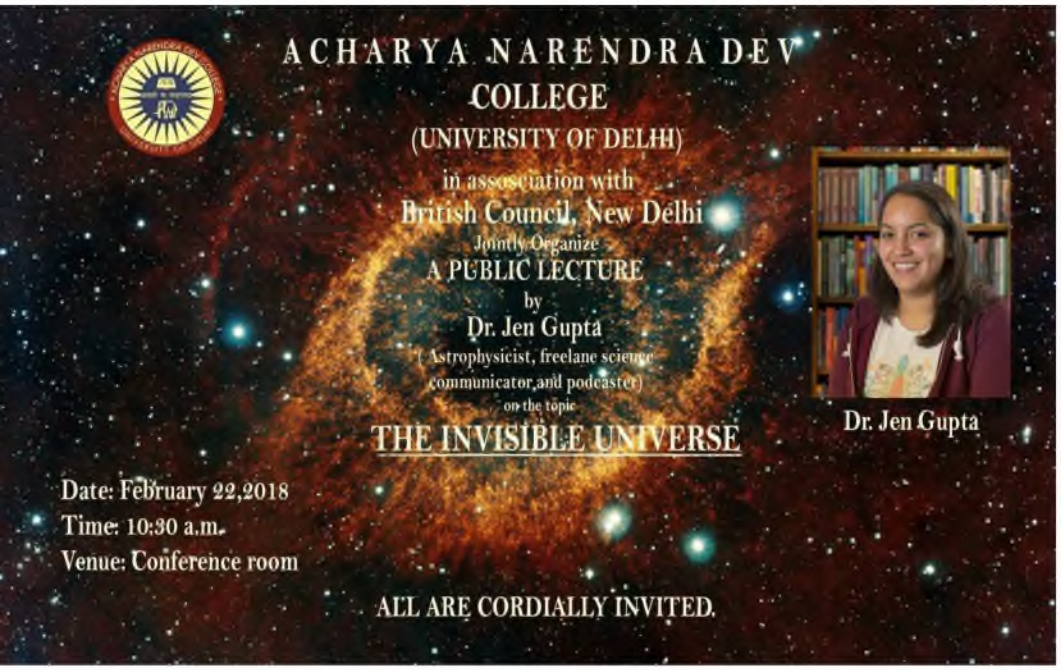
The need for SPECT arises from the limitations of other imaging techniques, such as X-rays, CT (Computed Tomography) scans, and MRI (Magnetic Resonance Imaging). While these techniques provide detailed images of the body's structures, they do not provide information about how organs and tissues function? SPECT is also useful for monitoring the effectiveness of treatments and therapies, as it can show changes in the distribution of the tracer over time. SPECT, on the other hand, can provide functional information by measuring the distribution of a radiopharmaceutical tracer in the body. The tracer emits gamma rays, which can be detected by a gamma camera to create images of the body's functions. These images can help diagnose a range of medical conditions, such as cardiovascular disease, brain disorders, and cancer.

In summary, the need for SPECT arises from the need to diagnose and monitor a range of medical conditions that cannot be diagnosed with other imaging techniques. SPECT provides functional information that can complement the structural information provided by other imaging techniques, leading to more accurate diagnoses and better treatment outcomes. Optical imaging is currently being used in the clinic for guided surgery as well as detection of cancerous tissue. The talk provided the audience a flavor of how advances in optical imaging are being used to drive better patient centric outcomes

Seminar on "Applications of Biomedical imaging in Drug Discovery and Treatment monitoring".

Date :- 26/9/17

Time :- 1:30 pm



Speaker :- Dr. Soumya Mitra.

Report

The North-East Cell at ANDC:

The North-east cell at ANDC had a nascent beginning in the last academic year. However, the cell is already showing signs of maturity and the students of this cell have shown great organizational skills which were amply displayed in the current academic year. To begin with, the cell organized a grand welcome of the new entrants to the college on September 16, 2017. This was an occasion to know each other and breaking barriers. During this event a cultural programme too was organized wherein the students belonging to the North-East states of India displayed the unique and vibrant culture of these states. During this meet, the students also discussed the various activities to be organized throughout the year in the college. For smooth operation of the cell, it was decided to have an elected executive body of the cell. The cell unanimously elected a President, Secretary, Treasurer and three executive members to be their representatives.

The North-East Cell organized a football match in the college on the 26 th September 2017 between the teams from the NorthEast Cell and the rest of the college. It was an exciting match – won by the rest of the college team. This sporting activity was undertaken under the aegis of "Ek Bharat, Shrestha Bharat" scheme of the Govt. Taking forward the emphasis on the state of Assam in the "Ek Bharat, Shrestha Bharat" scheme of the Ministry of HRD, the North- East Cell of the college presented 'Bihu -the group dance' on the occasion of the Alumni meet of the college on February 18, 2018. This was highly appreciated by the Alumni and other audience present in the college. The North-East Cell went on to present a more complex version of the Assam's 'Bihu' dance in the competitive event of the Annual Fest of the College also, which too was highly appreciated.

Public Lecture by Dr. Jen Gupta:

The Department of Physics in Association with the British Council, New Delhi organized a public lecture by Dr Jen Gupta on February 22, 2018 in the conference Hall of the college. Dr Jen Gupta is an astrophysicist and a Science Communicator based in the Institute of Cosmology and Gravitation at the University of Portsmouth, UK where she is the SEPnet/Ogden Physics Outreach and Public Engagement Manager . Her talk titled "The Invisible Universe" was a part of the flagship programme- 'Great talks' of the British Council, New Delhi. Her talk delved into the enormousness of the Universe which can be explored by probing it by the probes other than the visible range viz., x-ray, UV and infrared. Her lecture, which was supplemented by beautiful images of the various astronomical objects, evoked great interest and curiosity among the students, which led to a very intense interaction between the speaker and the students.

Seminar on "The Invisible Universe"
Date:- 22/2/18 ; Time:- 10:30 am Speaker: Dr. Ien Gupta

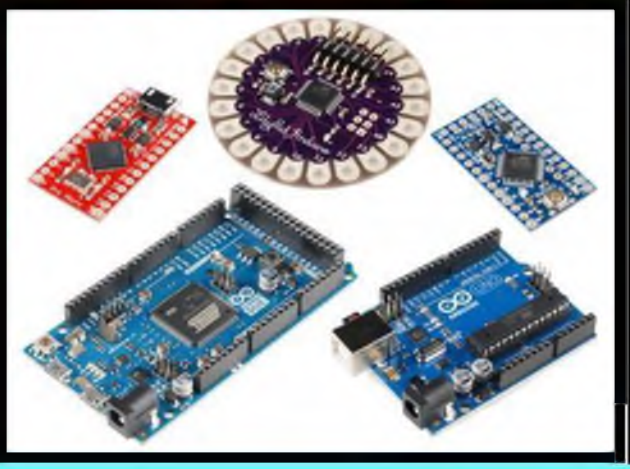
Hands – on workshop on

ARDUINO

Basic Programming & Applications

[under the aegis DBT STAR College scheme]

11 – 12 April 2018



Onsite registration Fee – Rs. 350/-
Limited seats – 20 (first come first serve basis)
Lunch and tea will be provided
Workshop begins at 8:45 a.m.

Requisites

a) Bring your own laptop (Linux/Windows)
b) Active participation on both days
c) USB pen drive for softwares (> 1 GB)

Deliverables

a) Certificate of participation
b) Free software
c) Hands-on Arduino Uno
d) Hard-copy manual

Convener
Dr. Arijit Chowdhuri

Coordinator
Dr. V. Bhasker Raj

Student Coordinator
Jatinder Pal Singh
8745006080

Student Coordinator
Priya Chopra

Report

Arduino is an open-source platform for building and programming electronic devices. It consists of a physical board with a microcontroller and a software development environment for creating and uploading code to the board. The board typically has a variety of inputs and outputs, including digital and analog pins, USB ports, and wireless communication capabilities, making it versatile and customizable for a wide range of applications.

Arduino was developed to make it easier for people to build and prototype electronic devices, even if they have little to no background in electronics or programming. Its open-source nature has also made it a popular tool for makers, students, and hobbyists, as well as professionals in various fields.

The Arduino software development environment includes a code editor, compiler, and libraries that make it easy to write, upload, and test code on the board. The code is written in a simplified version of C/C++ programming language, making it accessible to beginners and experienced programmers alike.

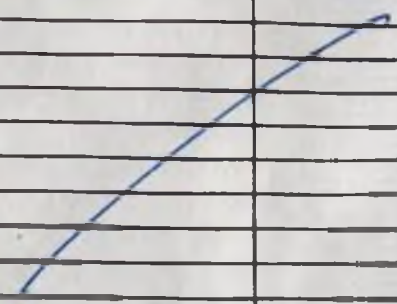
Some of the applications of Arduino include robotics, home automation, environmental monitoring, and wearable technology. Its low cost, ease of use, and open-source nature have made it a popular platform for innovation and experimentation, and it has sparked a growing community of developers and enthusiasts around the world.

Some of the many reasons why learning about Arduino, assumes importance include :

a) Creating electronic projects: Arduino allows you to create a wide variety of electronic projects, from simple LED displays to complex robotics projects. By learning Arduino, you can develop the skills to create your own electronic devices and bring your ideas to life.

b) Advancing your career: If you work in a field related to electronics or programming, learning Arduino can be a valuable skill that sets you apart from others in your industry. It can also help you develop the skills you need to take on more challenging projects and advance your career.

c) Building your knowledge of electronics and programming: Arduino is an excellent platform for learning about electronics and programming, as it provides a practical and hands-on approach to these topics. By learning Arduino, you can gain a deeper understanding of these subjects and apply your knowledge to other areas of your life and work.



Hands on workshop on ARDUINO, Basic Programming & Application

Date:- 11-12 April 2018 ; Time:- 8:45am onwards

List of participants

S. No.	Name	Roll No	Course
1	ANVIKSHA BHARDWAJ	XO-809	BSc (H) Physics 2nd year

Conferences/Workshops/Seminars for the year 2018-19

ACHARYA NARENDRA DEV COLLEGE
(University of Delhi)
NAAC accredited 'A' grade

Department of Physics

(under the aegis of DBT STAR College scheme)

in collaboration with

Joy of Learning Foundation, Delhi

cordially invites students and colleagues to an interactive session on

'Paradigm shift in Physics Education through hands-on techniques in Optics'

Date: 05 & 07 September 2018 (Wednesday & Friday)
Time: 10.00 a.m.
Venue: Seminar Hall (new block)

Patron:	Dr. Savithri Singh
Convener:	Dr. Arijit Chowdhuri
Coordinators:	Dr. Manisha Verma and Dr. Sanjeeta Rani

Event Photographs

Report

The Hands-on workshop involved clearing the concept of Total Internal Reflection (TIR). It is a phenomenon that occurs when light travels from a medium with a higher refractive index to a medium with a lower refractive index, and the angle of incidence is greater than the critical angle. In this case, the light is completely reflected back into the medium with the higher refractive index, rather than being transmitted into the medium with the lower refractive index. The critical angle is the angle of incidence at which the refracted angle becomes 90 degrees. If the angle of incidence is greater than the critical angle, the light is completely reflected back into the medium with the higher refractive index. This phenomenon is useful in a variety of applications, including optical fibers, prisms, and binoculars. One of the most common applications of total internal reflection is in optical fibers. Optical fibers are long, thin strands of glass or plastic that are used to transmit light over long distances. The fiber consists of a core, which has a higher refractive index than the surrounding cladding, and a protective outer coating. When light is introduced into the fiber at one end, it is transmitted through the core by total internal reflection. The light reflects off the boundary between the core and the cladding, which prevents it from escaping the fiber. The light can be transmitted over long distances with little or no loss of signal, making optical fibers ideal for use in telecommunications, medical equipment, and other applications where high-speed, low-loss transmission is critical. Prisms are another example of how total internal reflection can be used. A prism is a piece of glass or other transparent material with flat, polished surfaces that refract and reflect light. When light enters a prism at an angle greater than the critical angle, it is reflected back into the prism and undergoes multiple reflections before exiting at a different angle. This allows prisms to be used to split light into its component colors, as well as for other optical applications. In conclusion, total internal reflection is a useful phenomenon that occurs when light travels from a medium with a higher refractive index to a medium with a lower refractive index at an angle greater than the critical angle. This phenomenon is used in a wide range of applications, including optical fibers, prisms, and binoculars, and plays a critical role in modern technology and communication.

In the workshop TIR was investigated using pen LASERs. LASER stands for "Light Amplification by Stimulated Emission of Radiation." It is a device that emits a beam of light through a process of optical amplification based on the stimulated emission of photons. LASERs produce a coherent and monochromatic beam of light that can be focused into a narrow beam and used for a variety of applications, including cutting and welding, medical procedures, and communication technologies. The properties of LASERs, such as their high intensity and directional beam, make them a powerful tool in many fields of science and technology, and they continue to be an important area of research and development today.

Workshop on "Paradigm Shift in Physics Education through hands on Techniques in optics" ; Date:- 5 & 7 Sept 2018 ; Time - 10 am onwards

	List of participants		
S. No.	Name	Roll No	Course
1	UTTAM SINGH	YO-952	BSc Prog 2nd year

ACHARYA NARENDRA DEV COLLEGE

(University of Delhi)

NAAC accredited 'A' grade

Department of Physics

(under the aegis DBT STAR College scheme)

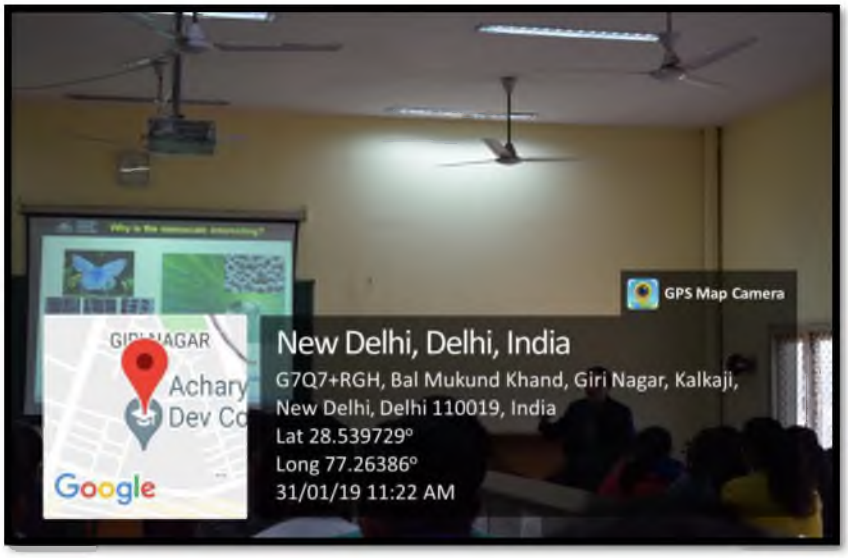
is privileged to host

Prof. Hark Hoe Tan

Professor at Research School of Physics and Engineering,
at Australian National University, AUSTRALIA

The Department cordially invites all students and Colleagues to an interactive session on

"Nanotechnology – applications in Optoelectronics and Renewable Energy"



Date: 31 January 2019 (Thursday)

Time: 10.45 a.m.

Venue: Laboratory 3, Department of Physics

Professor Hark Hoe Tan explained that nanotechnology refers to the engineering of materials and devices on the nanoscale, typically on the order of one to a few hundred nanometers. Optoelectronics is a branch of electronics that deals with the interaction of light and electricity. The combination of nanotechnology and optoelectronics has led to a wide range of new applications and technologies. One major application of nanotechnology in optoelectronics is in the development of new materials with novel optical properties. For example, quantum dots, which are nanoscale particles that emit light at specific wavelengths, can be used to create highly efficient light-emitting diodes (LEDs) and solar cells. Nanoparticles of metals such as gold and silver can be used to enhance the light absorption and emission properties of other materials, leading to improved efficiency and performance. Another area of research is the development of nanoscale photonic devices, such as waveguides, modulators, and filters, that can be used to manipulate light on the nanoscale. These devices can be integrated with electronics to create highly compact and efficient optoelectronic systems for use in applications such as telecommunications and sensing. Nanotechnology is also being used to improve the performance of existing optoelectronic devices, such as photodetectors and lasers. For example, the use of nanoscale structures can improve the sensitivity and speed of photodetectors, while nanoscale coatings can enhance the performance of lasers. Overall, the application of nanotechnology in optoelectronics is an exciting area of research with significant potential for advancing a wide range of technologies and application.

Professor Tan also explained that Nanotechnology has the potential to revolutionize the renewable energy sector by improving the efficiency and costeffectiveness of renewable energy sources such as solar, wind, and hydro power. One key application of nanotechnology in renewable energy is in the development of more efficient solar cells. Nanomaterials such as quantum dots and nanowires can be used to create highly efficient solar cells that are capable of converting a greater percentage of sunlight into electricity. Additionally, nanomaterials can be used to improve the durability and lifespan of solar panels, reducing the need for maintenance and replacement. Nanotechnology can also be used to improve the performance of energy storage devices such as batteries and capacitors. Nanomaterials can be used to increase the surface area of electrodes, which can improve the energy density and charge/discharge rates of these devices. In the wind energy sector, nanomaterials can be used to create stronger and more lightweight turbine blades, improving the efficiency and reducing the cost of wind energy. Nanomaterials can also be used to improve the durability of wind turbine components, reducing maintenance costs and downtime. Finally, in the field of hydro power, nanotechnology can be used to improve the efficiency of water turbines by reducing friction and improving the transfer of energy from water to electricity. Overall, the integration of nanotechnology into renewable energy systems has the potential to make clean energy sources more efficient and cost-effective, helping to reduce our dependence on fossil fuels and mitigate the impacts of climate change.

Seminar on "Nanotechnology applications in optoelectronics & Renewable Energy" — Professor H. Hoe Tan – 31/01/2019

ANU, Australia

10:45 a.m.

ACHARYA NARENDRA DEV COLLEGE

(University of Delhi)
NAAC accredited 'A' grade

Department of Physics

(under the aegis DBT STAR College scheme)
welcomes all students and colleagues at the inauguration of its society function PHYSENTROPY 2019 with Lecture series

Prof. Vinay Gupta - 'Functional Materials for Device Applications'

Dean Examinations & Professor at
Department of Physics & Astrophysics, University of Delhi

Mr. Sujit Kumar – 'MoS_2: a promising 2D Material'

a) Visiting Scholar at National Device Laboratory, Taiwan

b) Taiwan Semiconductor Manufacturing Company (TSMC)

Ms. Phalguni Mathur – 'MIMO antennas for 5G and IoT'

a) Research Scholar at Bharathiar University, Coimbatore

b) Specialist in Microwave Electronics and RADAR Systems

15 March 2019 | **10.00 a.m.** | **Laboratory - III**

Event Photographs

Professor Vinay Gupta explained that Functional materials refer to materials that exhibit specific physical, chemical, or electronic properties that can be harnessed for practical applications. These materials are essential for the development of many modern devices, including sensors, actuators, solar cells, batteries, and electronic components. One of the key areas of research in functional materials is the development of materials for electronic device applications. This includes materials such as semiconductors, which are used to create transistors and other electronic components. Other important materials include conductive polymers, which are used for flexible electronics, and transparent conductive oxides, which are used in touch screens and displays. Functional materials are also essential for the development of sensors and actuators. For example, piezoelectric materials, which generate a voltage in response to mechanical stress, can be used in sensors for pressure and vibration detection. Similarly, shape-memory alloys and polymers can be used in actuators to convert electrical signals into mechanical motion. In the energy sector, functional materials are essential for the development of renewable energy technologies such as solar cells and batteries. For example, the use of organic or hybrid materials in solar cells can lead to improved efficiency and reduced cost. Similarly, the development of advanced materials for lithium-ion batteries can improve their energy density and lifespan. Functional materials are also important in the field of biomedicine, where they are used in a wide range of applications, from drug delivery systems to tissue engineering. For example, biocompatible polymers can be used to create scaffolds for tissue regeneration, while magnetic nanoparticles can be used for targeted drug delivery. Overall, the development of functional materials is a critical area of research with broad applications in many different fields. Advances in this area have the potential to revolutionize the development of new technologies and improve the efficiency and performance of existing devices.

Mr. Sujit Kumar with his vast experience in TSMC propounded that Molybdenum sulfide (MoS2) is a two-dimensional (2D) material that has been attracting significant attention in the field of materials science in recent years. This material belongs to the family of transition metal dichalcogenides (TMDs) and has unique electronic and optical properties. MoS2 has a layered structure, consisting of a hexagonal lattice of sulfur atoms sandwiched between two layers of molybdenum atoms. Due to its 2D nature, MoS2 exhibits remarkable mechanical flexibility and high surface area, which makes it attractive for a wide range of applications, including catalysis, energy storage, and electronic devices. One of the most promising applications of MoS2 is in the field of electronics. MoS2 is a semiconductor, which means that it can be used to create transistors and other electronic components. MoS2 transistors have been shown to have excellent electrical properties, such as high on-off current ratios and low leakage current. In addition, MoS2 is compatible with existing semiconductor fabrication techniques, making it an attractive material for use in next-generation electronics.

Ms. Phalguni Mathur on the other hand explained how 5G MIMO antennas are a critical component of 5G wireless technology, which promises to deliver faster data rates, lower latency, and increased connectivity compared to previous generations of wireless

technology. MIMO stands for Multiple Input Multiple Output, and refers to a technology that uses multiple antennas at both the transmitter and receiver to improve communication efficiency and reliability. In 5G wireless networks, MIMO technology is used to increase the capacity and coverage of the network, and to support advanced applications such as augmented reality and virtual reality. 5G MIMO antennas can support a variety of different frequencies and bandwidths, and can be configured in different ways to meet the specific needs of different applications. One of the key advantages of 5G MIMO antennas is their ability to support beamforming, a technique that allows the antenna to direct its signal towards a specific receiver. This can improve signal strength and reduce interference, making it easier to achieve high data rates and reliable connectivity in a wide range of environments.

Seminar on 'Functional Materials for Device Applications'

Date:- 15/3/19 ; Time:- 10 am. Speakers: Prof. Vinay Gupta
Mr. Sujit Kumar
Ms Phalguni Mathur

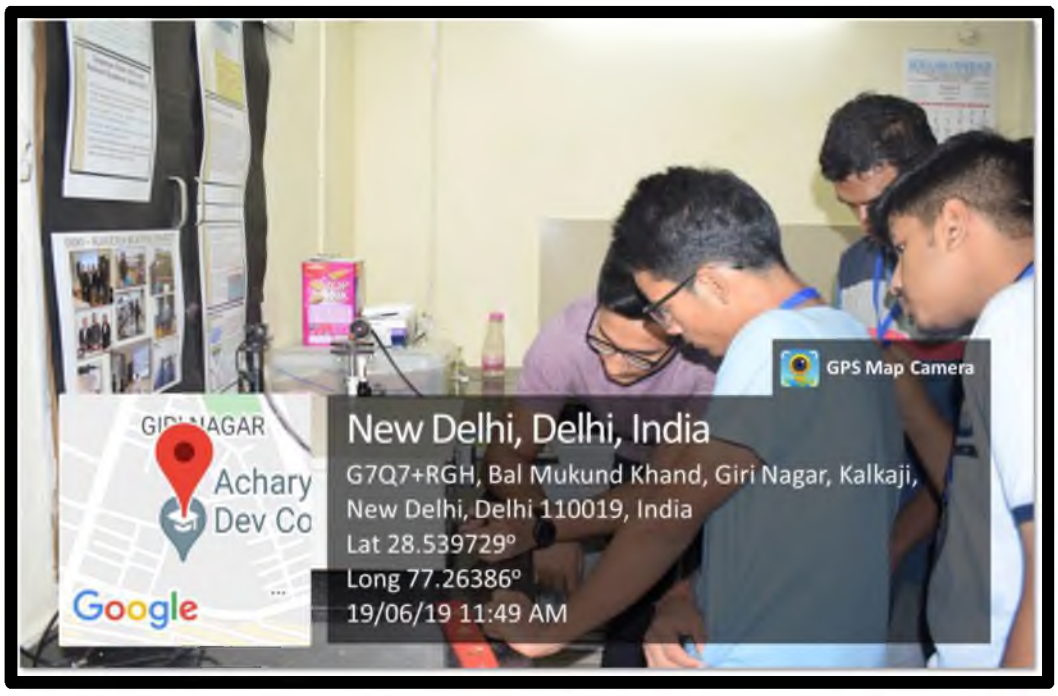
Grade "A" by NAAC | DBT Star College

organized by Departments of Botany, Chemistry, Physics & Zoology under the aegis of DBT Star College Scheme

June 18 – 24, 2019



Venue: Zoology Laboratory
Time: 9.15 a.m.

Interdisciplinary workshop

"Learning Science by Doing Science"

Event Photographs

In today's world, a major chunk of researchers are focusing on the material science and its applications. Materials such as semiconductors, metals, composites, nanotech materials, carbons or high-tech ceramics make our lives easier. They are sources of industrial growth and technological changes. Thus, material science is an interdisciplinary field incorporating elements of applied physics, life sciences and chemistry. The applications of material science research are enormous. It includes enhancing the physical, structural and chemical properties of building materials, modulating the optical properties of materials for sensors, solar cells, and LEDs, varying the ferroelectric and ferromagnetic properties of thin films for memory applications, enhancing electrical properties for high speed conduction materials and many more. Now before final fabrication of any material in bulk, thin film or nanomaterial (nanofilm, nanowire/nanorod and nano dot) form, its characterization is very vital. A 1967 report of the National Materials Advisory Board (NMAB) on "The Characterization of Materials" gives the definition of characterization as follows: "Characterization describes those features of the composition and structure (including defects) of a material that are significant for a particular preparation, study of properties, or use, and suffice for the reproduction of the material.

There are lot of characterization tools available like XRD (for structural properties), UV Visible/FTIR/Raman spectroscopy (for optical properties), Hall measurement, Vibrating Sample Magnetometer (for magnetic properties etc.). Although all characterization tools have their own significance but optical methods have their unique place amongst all. Different characterization tools are available in the market to study optical properties like absorbance, reflectance, dielectric constant, refractive index etc of different materials. In this workshop we are focussing on 2 different highly popular and sophisticated optical characterization tools: UV-Visible Spectroscopy and Surface Plasmon Resonance (SPR). Also, SPR is not just a characterization tool but has been widely used as a powerful technique for physical, chemical and biological sensing applications. Overall Surface Plasmon Resonance (SPR) is seen to be a powerful characterization tool that is widely used in biotechnology and materials science. It is based on the detection of changes in the refractive index of a material when it interacts with a surface plasmon wave, and can be used to study biomolecular interactions, material binding events, and more.

Programme

Inter-College hands-on workshop on

SURFACE PLASMON RESONANCE (SPR) & UV-VISIBLE SPECTROSCOPY:

Basic working principles and Environmental Applications

[organized by Departments of Physics & Botany, under aegis of STAR College scheme]

23 - 27 August 2019

Venue: Physics Laboratory - III

Tentative Programme

23 August 2019 (Friday)		
0845 - 0945	Registration	
1000 - 1015	Introduction to STAR Initiative - Dr. Ravi Toteja, Principal	
1015 - 1115	Basics of UV-Vis spectroscopy in determining chlorophyll content - Dr. Yash Mangla	
1115 - 1130	Tea	
1130 - 1230	Basics of Surface Plasmon Resonance (SPR) - Dr. Ayushi Paliwal	
1230 - 1300	BREAK	
1300 - 1415	Hands - on session 1 (SPR / UV-Vis)	
1415 - 1430	Tea	
1430 - 1545	Hands - on session 2 (SPR / UV-Vis)	

26 August 2019 (Monday)		
1000 - 1100	Physical, Chemical and Biological applications of SPR	Dr. Prashant Pradhan
1100 - 1115	Tea	
1115 - 1230	Hands - on session 3 (UV-Vis / SPR)	
1230 - 1300	BREAK	
1300 - 1415	Hands - on session 4 (UV-Vis / SPR)	
1415 - 1430	Tea	
1430 - 1500	Technical Discussion	

27 August 2019 (Tuesday)		
1000 - 1100	Role of bacteriophages in managing pollution due to antibiotics	Dr. Urmi Bajpai
1100 - 1120	Tea	
1120 - 1150	Discussion and feedback session	
1150 - 1300	Certificate distribution and vote of thanks	

Report

Surface Plasmon Resonance (SPR) is a powerful optical technique that is widely used in various fields, including biosensors, drug discovery, and materials science. SPR is based on the interaction between an electromagnetic field and the oscillation of electrons at the interface between a metal and a dielectric material. One of the main applications of SPR is in biosensing. SPR biosensors are used to detect and quantify biomolecules, such as proteins, DNA, and cells, in real-time and label-

free. SPR biosensors can provide highly sensitive and specific detection of biomolecules, and they have been widely used in various fields, such as medical diagnosis, drug discovery, and food safety. Another application of SPR is in the study of material properties. SPR can be used to investigate the optical and electronic properties of thin films, nanoparticles, and other nanostructures. SPR can provide information about the refractive index, thickness, and composition of the materials, as well as their interaction with the surrounding environment. Furthermore, SPR has been used in the development of plasmonic devices, such as plasmonic waveguides, filters, and modulators. Plasmonic devices can manipulate the light at the nanoscale, leading to potential applications in photonics, data storage, and optical computing. In summary, SPR is a versatile and powerful technique that has a wide range of applications in biosensing, materials science, and photonics. The development of SPR-based technologies is expected to continue to advance these fields and enable new applications in the future.

UV-Visible spectroscopy is a widely used technique in chemistry, biochemistry, and materials science for the analysis of molecules and materials. UV-Visible spectroscopy measures the absorption of light in the UV and visible regions of the electromagnetic spectrum, which provides information about the electronic structure and properties of the samples. One of the main applications of UV-Visible spectroscopy is in the determination of concentration and purity of samples. UV-Visible spectroscopy can be used to quantify the amount of a substance in a sample based on its absorbance at a specific wavelength. This method is commonly used in pharmaceutical and biotech industries to monitor the concentration of active ingredients and impurities in drugs and biologics. UV-Visible spectroscopy is also widely used in the study of chemical reactions and kinetics. The absorbance changes of a reactant or product over time can be monitored using UV-Visible spectroscopy, which provides information about the rate and mechanism of the reaction. In addition, UV-Visible spectroscopy is a valuable tool for the characterization of materials, such as pigments, dyes, and polymers. The absorption spectra of these materials can provide information about their electronic and optical properties, such as the color, stability, and reactivity. Furthermore, UVVisible spectroscopy is used in the study of biological molecules, such as proteins, nucleic acids, and enzymes. The absorption spectra of these molecules can provide information about their structure, conformation, and interactions. In summary, UVVisible spectroscopy is a versatile and widely used technique that has a broad range of applications in chemistry, biochemistry, and materials science. The development of new methods and instrumentation is expected to further expand the applications of UVVisible spectroscopy in the future.

List of Participants

Workshop on SPR and UV-Vis spectroscopy

Basic working principle and Environmental applicatio

23-27 August 2019

ACHARYA NARENDRA DEV COLLEGE

(University of Delhi)

NAAC accredited 'A' grade

Department of Physics

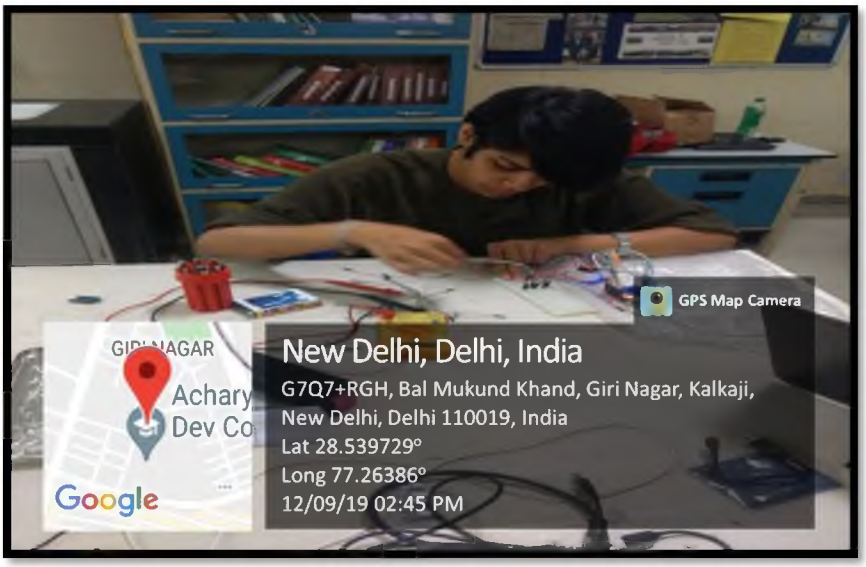
(under the aegis DBT STAR College scheme)

is privileged to host

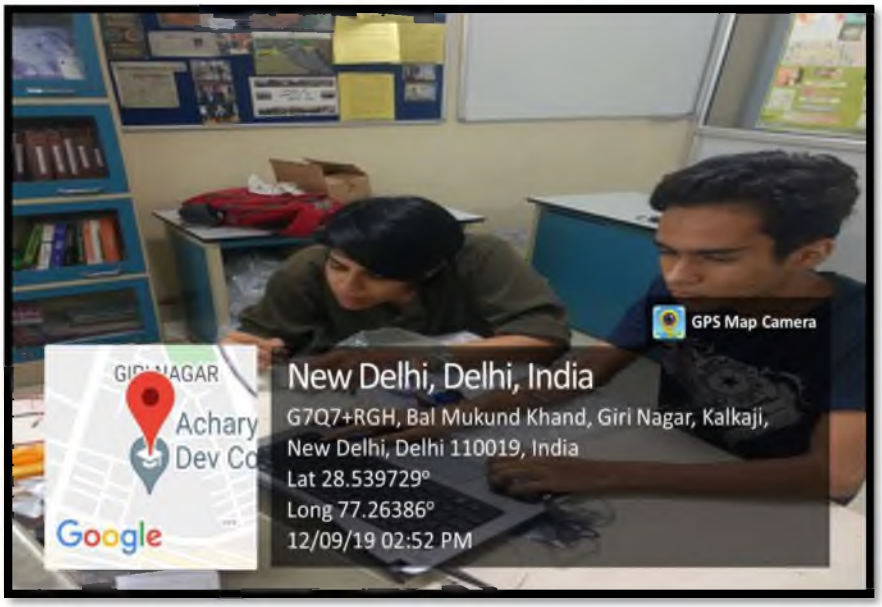
Ms. Priya Chopra

Bonn-Cologne Graduate School of Physics and Astronomy (BCGS), Bonn, GERMANY

The Department cordially invites all students and colleagues to an interactive session on



"Quartz Crystal Microbalance (QCM) for environmental monitoring and gas detection"



Date: 12 September 2019 (Thursday)

Time: 1.30 p.m.

Venue: College Conference Centre

Event Photographs

Report

Ms. Priya Chopra dwelled upon how Quartz Crystal Microbalance (QCM) was a highly sensitive analytical technique that is used to measure changes in the mass of a thin film or adsorbed material on the surface of a quartz crystal. The technique is based on the piezoelectric effect of quartz crystals, which generate an electrical signal when subjected to mechanical stress. A typical QCM consists of a quartz crystal that is coated with a thin film of the material of interest. The crystal is then oscillated at a specific frequency, which is determined by the mass of the film and its properties. When the film is exposed to a gas or liquid, the mass of the film changes, which causes a shift in the frequency of the crystal oscillation. The shift in frequency is directly proportional to the mass of the material that is adsorbed on the surface of the crystal. QCM has a wide range of applications in materials science, chemistry, and biology. It can be used to study the adsorption and desorption of molecules on a surface, the formation and growth of thin films, and the interaction of biomolecules with surfaces. QCM is also used in the development of sensors, biosensors, and drug discovery platforms. In summary, QCM is a highly sensitive analytical technique that is used to measure changes in the mass of a thin film or adsorbed material on the surface of a quartz crystal. Its wide range of applications makes it a valuable tool in materials science, chemistry, and biology.

One of the main applications of QCM is in the study of surface interactions. QCM can be used to measure the adsorption and desorption of molecules on a surface, the formation and growth of thin films, and the interaction of biomolecules with surfaces. QCM can provide information about the mass, thickness, and viscoelastic properties of the films, as well as the kinetics and thermodynamics of the interactions. QCM is also used in the development of sensors and biosensors. QCM sensors can be designed to detect various analytes, such as gases, liquids, and biomolecules, based on the changes in the mass of the sensor surface. QCM biosensors can provide highly sensitive and specific detection of biomolecules, such as proteins, DNA, and cells, in real-time and label-free. Furthermore, QCM is used in the study of materials properties, such as viscosity, density, and elasticity. QCM can provide information about the viscoelastic properties of films and coatings, as well as the adsorption and diffusion of molecules in porous materials. In addition, QCM is used in the development of drug discovery platforms. QCM can be used to study the interactions of drugs with their targets, as well

as the binding kinetics and affinity of drug candidates. QCM can also be used to study the permeation and transport of drugs through biological membranes. In summary, QCM is a versatile and highly sensitive analytical technique that has a wide range of applications in materials science, chemistry, and biology. The development of new methods and instrumentation is expected to further expand the applications of QCM in the future.

List of Participants

Seminar on SCM for environmental monitoring and gas detection

12 September 2019

Report

Interdisciplinary science is a field that integrates knowledge from different disciplines to address complex problems and challenges. New frontiers in interdisciplinary science are emerging as researchers from various fields collaborate to tackle critical issues that require a holistic and integrated approach. Here are some examples of new frontiers in interdisciplinary science:

Artificial Intelligence and Neuroscience: The integration of artificial intelligence (AI) and neuroscience has led to new frontiers in the study of the brain and behavior. Researchers are using AI to analyze complex brain data and develop predictive models of brain activity. This has the potential to revolutionize the diagnosis and treatment of neurological disorders and mental illness.

Materials Science and Energy: The development of new materials for energy storage and conversion is a crucial area of research for the transition to a sustainable and renewable energy system. Materials scientists are working with energy experts to develop new materials for batteries, solar cells, and fuel cells, which could significantly improve energy efficiency and reduce carbon emissions.

Environmental Science and Public Health: The intersection of environmental science and public health has become increasingly important as the impact of environmental pollution on human health becomes more evident. Researchers are studying the effects of air pollution, water contamination, and climate change on human health, and developing strategies to mitigate the risks and improve public health outcomes.

Social Science and Data Science: The integration of social science and data science has led to new frontiers in understanding human behavior and society. Researchers are using big data and machine learning techniques to analyze social media, online behavior, and demographic trends, which could provide insights into issues such as inequality, political polarization, and social cohesion.

Biomedical Engineering and Regenerative Medicine: The field of regenerative medicine is rapidly evolving, and researchers are using biomedical engineering techniques to develop new therapies and treatments for tissue and organ repair. This could have significant implications for the treatment of a wide range of diseases and injuries, including cancer, heart disease, and spinal cord injuries.

In summary, new frontiers in interdisciplinary science are emerging as researchers from different fields collaborate to address complex problems and challenges. These new frontiers have the potential to revolutionize our understanding of the world and provide innovative solutions to some of the most pressing issues facing society today. As interdisciplinary research continues to evolve, it is likely that we will see even more exciting and impactful developments in the future.

Report

Mr. Bishal K. das expounded upon the need to study interdisciplinary science. Interdisciplinary science is becoming increasingly important in addressing complex problems and challenges that cannot be solved by a single discipline alone. Here are some reasons why studying interdisciplinary science is essential:

a) Tackling Complex Problems: Interdisciplinary science enables researchers to approach complex problems from multiple perspectives and to integrate knowledge and techniques from different fields. This can lead to innovative solutions that would not be possible through a single-discipline approach.

b) Fostering Creativity and Innovation: Interdisciplinary science encourages creativity and innovation by breaking down traditional disciplinary boundaries and promoting collaboration and communication between researchers from different fields. This can lead to new ideas, approaches, and discoveries that have the potential to revolutionize our understanding of the world.

c) Addressing Societal Challenges: Interdisciplinary science is essential for addressing societal challenges, such as climate change, public health, and energy sustainability, which require an integrated approach involving multiple disciplines. By studying interdisciplinary science, researchers can develop solutions that consider the social, economic, and environmental factors involved in these challenges.

d) Career Opportunities: Interdisciplinary science is a rapidly growing field, and studying interdisciplinary science can provide opportunities for a wide range of careers in academia, industry, government, and non-profit organizations. Interdisciplinary scientists are in high demand, as they can bring a unique set of skills and perspectives to a variety of fields.

e) Personal and Professional Growth: Studying interdisciplinary science can also lead to personal and professional growth by providing opportunities for personal development, building new skills, and expanding your knowledge and understanding of the world.

In conclusion, the need to study interdisciplinary science has become increasingly important as the challenges facing our society become more complex and require an integrated approach. Studying interdisciplinary science can foster creativity, innovation, and collaboration, while also providing opportunities for personal and professional growth. By pursuing interdisciplinary research, we can develop solutions that can have a significant impact on society and help us build a better future.

Report

Professor Kedar Singh explained that photovoltaic solar cells are devices that convert sunlight into electrical energy. They are made of semiconducting materials, which absorb photons from the sun and release electrons, creating an electric current. The efficiency of photovoltaic solar cells has improved over the years, and they have become an increasingly important source of renewable energy. However, there is still a lot of room for improvement, and research is ongoing to develop new materials for future generation photovoltaic solar cells.

One of the most promising materials for photovoltaic solar cells is perovskite. Perovskite is a mineral with a unique crystal structure that allows it to absorb light and convert it into electricity. Perovskite solar cells have shown a great potential for high efficiency and low cost. They can be fabricated using solution-based techniques, which are much cheaper than the traditional

semiconductor manufacturing processes. However, perovskite solar cells are still facing some challenges, such as stability and durability issues, and researchers are working on improving their performance.

Another material that has been gaining attention for photovoltaic solar cells is organic semiconductors. Organic semiconductors are made of carbon-based molecules, which can be processed from solution to form thin films. They have shown great potential for low-cost, lightweight, and flexible solar cells, which can be integrated into various applications, such as wearable devices, building-integrated photovoltaics, and portable electronics. However, organic solar cells still have lower efficiency than their inorganic counterparts, and researchers are working on improving their stability and lifetime.

In addition to perovskite and organic semiconductors, there are other materials that are being explored for future generation photovoltaic solar cells, such as quantum dots, metal halide perovskites, and two-dimensional materials. Quantum dots are tiny particles that can absorb light and emit it at different wavelengths, making them suitable for multi-junction solar cells that can harvest a wide range of sunlight. Metal halide perovskites are a class of materials that have similar properties to the traditional perovskite, but with improved stability and durability. Two-dimensional materials, such as graphene and transition metal dichalcogenides, have unique electronic and optical properties that can be tuned for solar energy conversion.

In conclusion, the development of new materials for photovoltaic solar cells is crucial for advancing the efficiency, cost-effectiveness, and applicability of solar energy. Perovskite, organic semiconductors, quantum dots, metal halide perovskites, and twodimensional materials are some of the promising candidates for future generation photovoltaic solar cells. However, there are still many challenges to overcome, such as stability, scalability, and compatibility with existing infrastructure. Nevertheless, the progress in materials science and engineering is expected to drive the growth of the photovoltaic solar cell industry and contribute to a sustainable energy future.

DEPARTMENT OF BOTANY

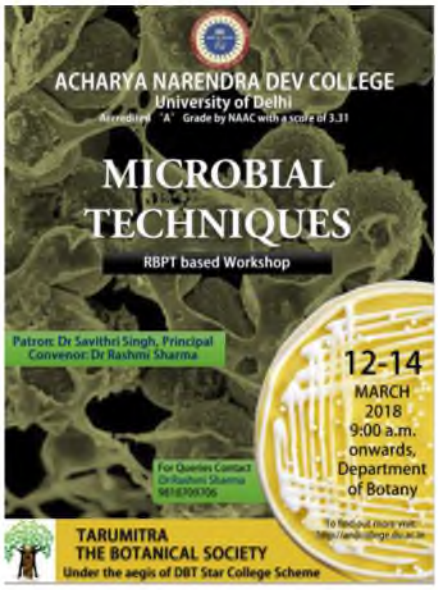
Conferences/Workshops/Seminars for the year 2017-18

WORKSHOP

MICROBIAL TECHNIQUES RBPT BASED WORKSHOP

12-14 MARCH 2018

Professor Pawan Kumar Dhar
Dean, School of Biotechnology
Jawahar Lal Nehru University
Email Id: pawandhar@mail.jnu.ac.in



Department organized a three day workshop on "Microbial Techniques" based on RBPT (Research Based Pedagogical Tools) under the aegis of DBT star college scheme.

Participants were given hands-on experience of Luria Bertani (LB) and LB agar media
preparation, autoclaving and laminar hood, use for inoculation, spreading and streaking of bacteria (*E. coli*) in LB and LB agar plates respectively. Lectures on preparation of competent cells, transformation and screening techniques were delivered by various faculty members. The process was also demonstrated through a video film. This was followed by hands-on preparation of the competent cells by the participants. Hands-on transformation of *E. coli* and inoculation on selection and screening media was performed by the students.

The concluding session was based on RBPT and was conducted by Dr Rashmi Sharma, wherein the participants were given an opportunity to represent their learning, understanding and applications of the microbial techniques on a poster. Participants were divided into random group of three and each group was asked to prepare one poster on application of their learning and experience gained during the workshop
for which they were allotted 3 hours and allowed access to study material from library and internet to ease their task. The posters were all displayed together and evaluated by a committee. Each member of the respective group actively participated and openly defended their ideas and proposed application of the techniques they learnt in the workshop.

Under the aegis of DBT Star College Scheme

Objective and Scope

The Primary objective of the workshop is to gain the insight of various basic techniques used in microbial laboratory by hands-on training and practical demonstrations. The workshop will provide the right exposure to the students at the undergraduate level and it is highly relevant in terms of advances in the contemporary era of microbial biotechnology. It's also a rare opportunity for students from non-biological courses to join in and gain hands on insight into the world of bacteria!

Focus Area

In addition to their multifarious roles `bacteria` are an ideal candidate for genetic engineering. They are relatively simple, single celled organisms with DNA not bound in any organelle. Available as an inexhaustible supply, they are easy to reproduce and to can be manipulated under laboratory conditions. The workshop will provide up-to-date knowledge in the field of practical microbiology with special reference to bacteria. It will encompass the basics of the laboratory techniques starting with setting up a bacterial culture up to bacterial tranformation.

Topics to be covered

- Introduction to microbiological lab-work: Sterilization, disinfecting steps and instruments/ equipment used for microbial culture
- Medium: media: Different types and preparation
- Bacterial culture: Basic of characterization, classification and identification of bacteria, Streaking, plating, incubation, evaluation of culture and storage of culture
- Bacterial Transformation: Preparation of competent cell, transformation by heat shock method followed by blue white screening to identify positive transformants.
- Application in genomics, industry
- Plasmid DNA isolation

Seminars

Biodiversity and the Need for its Conservation'

Dr. Rita Singh
Email: ritasingh@ipu.ac.in
Phone No. 9818792414
University School of Environment Management (USEM),
Guru Gobind Singh Indraprastha University (GGSIPU), New Delhi

November 2, 2017

On November 2, 2017 Professor Rita Singh from University School of Environment Management, Guru Gobind Singh Indraprastha University (GGSIPU), New Delhi enlightened the students by her lecture entitled 'Biodiversity and the Need for its Conservation'. She highlighted the importance of biological diversity in the maintenance of the equilibrium of the eco-system, traditional knowledge of India in shaping future research.

Environment, Ecology, Ecosystems and & Ecological Restoration'
Professor C R Babu
Email: crbabu26@gmail.com
Phone No. 9810586709
Professor Emeritus and Ex-Pro Vice Chancellor University of Delhi
18 Jan 2018

The lecture entitled 'Environment, Ecology, Ecosystems and & Ecological Restoration' by Professor Emeritus C.R. Babu on January 18, 2018 created an euphoria by showing the phenomenal efforts in transforming the degraded forest and wetlands in Delhi, particularly the Biodiversity Park and Neela Hauz Lake near JNU. He is a renowned scientist working on several diverse aspects of conservation Biology, environment management, and restoration in India and abroad. During his talk, he highlighted the role of a functional ecosystem in solving many challenging problems of pollution and global climate change.

Interesting advances in haemoglobin Research: Beyond the Textbook
October 11, 2018
Professor Suman Kundu
Department of Biochemistry
South Campus
University of Delhi
Email: suman.kundu@south.du.ac.in
Phone No. 91-11-24117460

Tarumitra the botanical society of the college organized a lecture on 'Interesting Advances in Haemoglobin Research' by Professor Suman Kundu. He put light on unexplored areas in blood research and its importance in the normal wellbeing. He also explained about how blood maintains the homeostasis.

Computational Gastronomy: The emerging data science of food, flavors and health
February 14, 2019

Dr. Ganesh Bagler
Assistant Professor
Indraprastha Institute of Informational Technology, Delhi
Email: bagler@iiitd.ac.in
Phone: 011-26907443

A lecture was organized by 'Tarumitra' the botanical society on 'Computational Gastronomy' by Dr. Ganesh Bagler. The lecture explained the chemistry behind the food and culinary science. Dr. Bagler explained the chemistry and interaction of various spices, their synergestic and antagonistic nature. He also demonstrated the mobile app he developed where one can explore the nature, indication and contraindication of various food materials.

A lecture on Bionics and Bionic Engineering: Learning Science from Nature
March 26, 2019
Dr. Pardeep Kumar Srivastava
Former Dy. Director (Sr. Principal Scientist)
Central Drug Research Institute, Lucknow, Uttar Pradesh
Email: 9415117548
Phone: pkscdri@gmail.com

Organized Dr. Saumya Saxena Memorial Lecture on March 26, 2019. Dr. Pradeep Kumar Srivastava from Central Drug Research Institute, Lucknow delivered a talk on 'Bionics and Bionic Engineering: Learning Science from Nature'. He introduced the students to Scientoons and Scientoonics.

Tarumitra Inaugural Lecture Series

September 25 2019

Dr. C V Srikanth
Professor
Regional Centre for Biotechnology
NCR Biotech Science Cluster
3rd Milestone, Faridabad-Gurgaon Expressway
P.O. Box No. 3, Faridabad - 121 001
Haryana (NCR Delhi), India
Email: cvsrikanth@rcb.res.in
Phone No.: 91 129-2848820

Dr. Vandana Mishra
Department of Environmental Studies,
Laboratory of Bioresources & Environmental
Biotechnology,
University of Delhi, Delhi-110 007, INDIA
Email: mistletoe_h@hotmail.com
Phone No.: 9871260287

Under the inaugural function of botanical society talks by alumni were organised. Dr. CV Srikanth, Associate Professor, Regional Centre of Biotechnology, Faridabad, Haryana deliberated his views on 'Being in Biomedical Research in India: From a Rat race to taking up real challenge of combating diseases. He discussed with students about the advantages of being in scientific career, the various perks and how to go ahead among our pears.

Dr. Vanadana Mishra, Assistant Professor, Department of Environmental Studies, University of Delhi, another departmental alumni put her views on a very interested topic ' Biopropecting: A path from ecology to entrepreneurship' where she explained how various scientists took cues from nature and animals to solve big problems of modern world. She gave many examples like vacuum gloves from gecko, strongest fibres from spider web etc. Her views enthused the students to go for higher studies in science to explore the beauty of biological sciences.

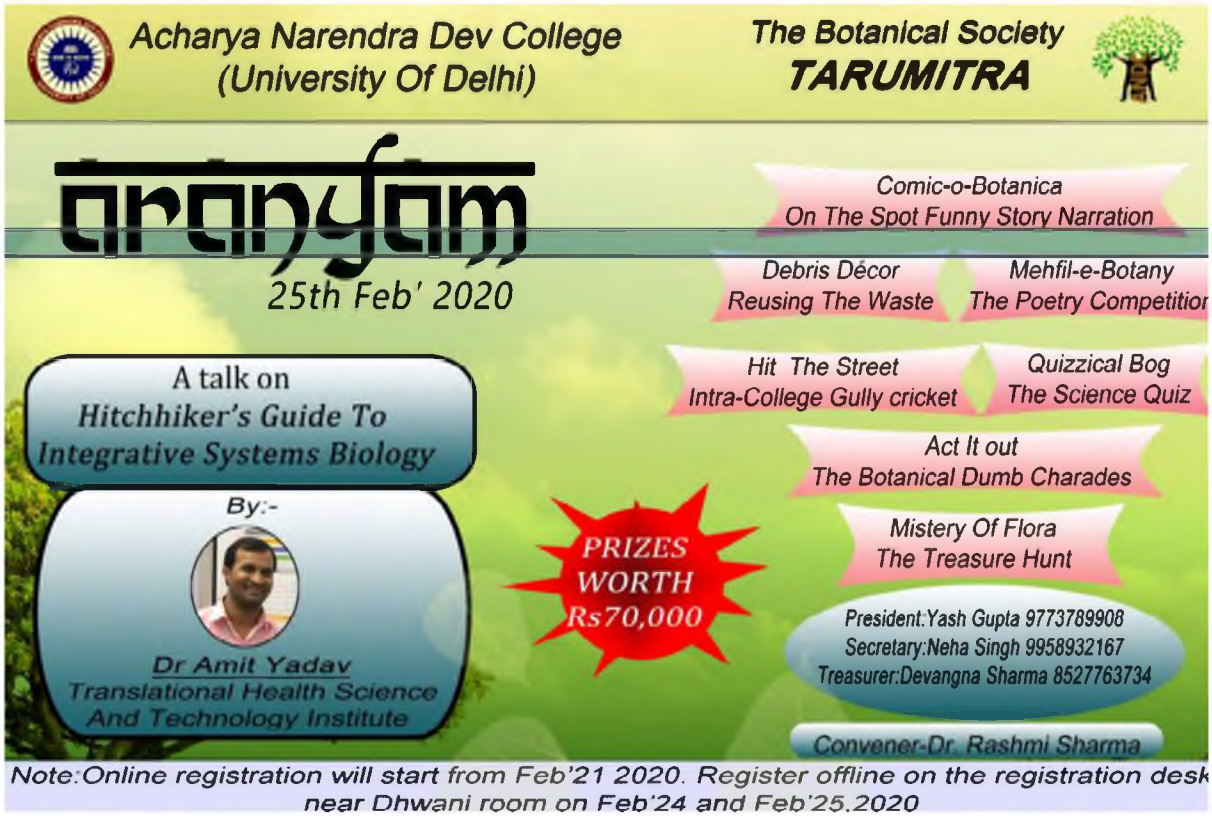
Hitchhiker's Guide to Integrative Systems Biology

February 25 2020

Dr. Amit Kumar Yadav

Senior Research Scientist



Translational Health Science and Technology Institute

Phone No.: 01292876490

Email: amit.yadav@thsti.res.in

Dr. Amit Kumar Yadav, is Ph.D. in Computational Systems Biology, Bioinformatics, Proteomics, Big Data, Omics, Data Integration and a Research Scientist at Translational Health Science and Technology Institute. An alumnus of the college he delivered a talk at the valedictory function of Tarumitra entitled, 'The Hitchhiker's Guide to Bioinformatics'.

He took students on a journey into the world of bioinformatics and illustrated how from a simple gene sequence drugs could be synthesised in silico. His talk enthused students and they asked him many questions regarding facilities at his institution and how could they also become part of his institute.

'Humans for Nature'
Padamshri Dr. Prakash Amte and Dr. Mandakini Amte
October 15, 2020
Email: aniketamte@gmail.com, sachinmukkawar83@gmail.com

Phone No.: 91-7588772858

Department of Botany organized webinar on 'Humans for Nature' by Dr Prakash Baba Amte who is physician by profession and is associated with Lok Biradari Prakalp, Anandvan, Maharashtra (a project for the development of tribal people, the Madia Gond in the forests of Gadchiroli district). The talk was focused on balance between human life and nature and natural resources. He discussed various case studies of his own experiences how humans can live in harmony with the nature and wild life without modern amenities. He discussed his journey as a doctor and social worker in treating and eradicating leprosy in the tribal population of forests of Maharashtra, Andhra Pradesh and Madhya Pradesh. He even performed many emergency surgical procedures without electricity. He and his family also run a large animal conservation facility in Hemalkasa in Gadchiroli district of Maharashtra where rare, protected, and endangered animals are cared and have freedom to roam. It was a wonderful experience to the students and faculty to interact with such a dignitary.

'Arbuscular Mycorrhizal Fungi: true friends of plants'
Prof. Roopam Kapoor, Department of Botany, University of Delhi

March 23, 2021
Email: kapoor_rupam@yahoo.com
Phone: 9818497035
Tarumitra the botanical society invited Professor Roopam Kapoor to deliver a talk on 'Arbuscular Mycorrhizal Fungi: true friends of plants' where she discussed the importance of mycorrhiza (symbiont association of fungi and higher plants) for the growth and development of angiosperms and gymnosperms. She highlighted their role in evolution of angiosperms and mobilization of mineral nutrients from soil to plants. She explained her research in the field and its commercial application in bioaugmentation and bioremediation of pollution degraded lands.

Matrix of Multicellular Life: How cell adhesion regulates cell function
Dr. Balasubramanian Nagaraj
IISER, Pune
16 July 2020
Email: nagaraj@iiserpune.ac.in

Phone No. +91-20-25908202

The Department of Botany organised 'Dr Saumya Saxena Memorial Lecture' as webinar on 16 July 2020. Dr Balasubramanian Nagaraj, Associate Professor at IISER Pune was the speaker for the event. He talked on the topic 'Matrix of Multicellular Life: How Cell Adhesion regulates cell function'. Around 125 individuals attended the webinar which included Dr Saumya's colleagues from across the colleges under University of Delhi, her students and family members besides the faculty and students of our college.

Our principal Dr Ravi Toteja welcomed the other guests. Dr CV Srikanth, Associate Professor at Regional Centre for Biotechnology, student from the first batch of the department shared his experience with his teacher and mentor Dr Saumya Saxena. Dr Harsh Kumar, Dr Saumya Saxena's husband shared Dr Saumya's vision. He wished success to all the students participating in the webinar. Dr Rashmi Sharma was the moderator of the event and introduced the speaker Dr Nagaraj, facilitated the question-answer session post webinar and offered a vote of thanks to the audience for their active participation.

Dr. Saumya Saxena Memorial Lecture on Matrix of Multicellular Life: How cell adhesion regulates cell function ; by Dr. Balasubramanian Nagaraj (IISER, Pune) July 16, 2020

'Cultivation of edible mushroom : *Pleurotus* species'

Professor Rajni Gupta
Department of Botany
Kirori Mal College
University of Delhi
Email: rgupta@kmc.du.ac.in
Phone: 9873345150
June 17, 2021.

Tarumitra, the botanical society of Acharya Narendra Dev College has organized an online talk entitled "Cultivation of Edible Mushroom : Pleurotus species" on June 17, 2021 at 11.00 a.m. by
Professor Rajni Gupta, Department of Botany, Kirori Mal College, University of Delhi. Dr Gupta has excellently described about the process of cultivation of an economically valuable mushroom species
in a very simplified manner. She also discussed about the various aspects related to optimum growing conditions, use of different cost efficient substrates, economical and nutritional importance of the species. She also instill the essence of skill based learning in young listeners from varied field. After her lecture the students interacted with our guest speaker with their queries, where students felt that the session was very informative and interactive. Session ended with the vote of thanks by Dr Anita Narang (Teacher-in-charge)

June 23, 2021

On June 23, 2021, a guest lecture was held on the topic of 'Mycorrhizosphere to rhizosphere microbiome: The beautiful journey' Professor Manju Gupta, Department of Botany, Sri Aurobindo
College, University of Delhi. The lecture aimed to provide an overview of the role of mycorrhizal fungi in shaping the rhizosphere microbiome and its implications for plant growth and health. The
lecture was attended by more than 70 participants from diverse academic backgrounds. The lecture highlighted that mycorrhizal fungi play a crucial role in shaping the rhizosphere microbiome. These fungi release a variety of compounds such as organic acids, enzymes, and extracellular polysaccharides that alter the physicochemical properties of the soil and create a suitable habitat for
other microorganisms. In addition, mycorrhizal fungi also provide a carbon source to the rhizosphere microbiome, which enhances microbial growth and diversity. Furthermore, the rhizosphere microbiome plays a critical role in plant growth and health by facilitating nutrient uptake, improving soil structure, and protecting against pathogens. Professor Gupta shared her valuable research insights with students, which has increased curiosity among the students, which can be observed in the question answer session. Overall, the lecture provided an excellent opportunity for participants
to learn about the latest research on this important topic. The lecture has ended in a vote of thanks by our teacher-in-charge.

Acharya Narendra Dev College, University Of Delhi

Tarumitra-The Botanical Society Organized Lecture On
" From Mycorrhizosphere To Rhizosphere Microbiome: The Beautiful Journey
By Prof. Manju M. Gupta, Sri Aurobindo College, University Of Delhi

Conferences/Workshops/Seminars for the year 2020-21

Workshop

Workshop for the non-teaching staff on “Tools in Modern Biology”

April 26, 2022

Convenors: Professor Charu K Gupta, Dr, Rashmi Sharma

Coordinators cum Resource Persons: Dr. Sumit Sahni, Dr. Vineet Kumar Singh and Dr. Manoj Kumar Singh

Audience: Non teaching staff Acharya Narendra Dev College, No: 15

Department of Botany organized a One-Day workshop for the non teaching staff on to update them with all the new equipments purchased by the Department of Botany under DBT-STAR grant. The staff were given exposure of advance light microscope, Biosafety Level-II (BSL-II) cabinet, Double beam UV-Vis spectrophotometer, PCR machine and the parts thereof and Table top refrigerated centrifuge. The workshop was organized to enabled them to handle the instruments daily and for day to day maintenance and smooth functioning of these instruments.

Seminars

'Challenges and strategic solutions for breaking the bias for better nutrition and health outcomes'

Ms Deepti Gulati
Industry Chair Professor
National Institute of Food Technology Entrepreneurship and Management (NIFTEM)
Sonepat, Haryana
Email: dgulati@niftem.ac.in
Phone:+91 1302281000

Department of Botany organized a talk on March 08, 2022 "Challenges and strategic solutions for breaking the bias for better nutrition and health outcomes" by Ms Deepti Gulati, Industry chair
Professor, NIFTEM, Sonepat and recipient of Outstanding Ambassador of Nutrition and Food Fortification Award", 2020, from ASSOCHAM, "Nutrition Leadership Award" 2019, from IIHMR University, and "Outstanding Alumni Achievement Award" 2018 from MS University of Baroda, Gujarat. . She talked about how improvement in life style impacts our health. She also inaugurated the Mushroom Culture facility of the Department.

'Biodiversity Conservation as if people and ecosystem matter'

Dr Dhanya Bhaskar
Associate Professor
Indian Institute of Forest Management
Bhopal
October 28, 2021
Email: dhanyab@iifm.ac.in
Phone: 91-755-2775716 Extn:443

Department of Botany under the aegis of its society organized a talk by Dr Dhanya Bhaskar, Associate Professor at Indian Institute of Forest Management, Bhopal on 'Biodiversity Conservation as if People and Ecosystem Matter' on October 28, 2021. This lecture was organized as an inaugural lecture of the Botanical Society 'Tarumitra'. The delivered talk was an impetus for young minds to think about biodiversity conservation and the role of human activities in sustainable development.

Organizer: Dr Geetika Kalra (Sashakat Convener)

Resource Person: Riya Kushwaha

Date: September 16, 2021

Number of Participants: 56

The society has a committed group of enthusiastic students who organised an interactive webinar on ' Why him, why not her' by a budding author Riya Kushwaha who emphasized the need of equality between men and women in the society.

Energy Work to Declutter and Re-energize

Organizer: Dr Geetika Kalra (Sashakat Convener)

Resource Person: Ms Seema Sharma

Date: March 08, 2022

Number of Participants: 67

The college reopened and the society organised offline interactive talk by reiki masters, Ms. Seema Sharma on the topic 'Energy work to declutter and re-energize' on March 08, 2022. This was to address the mental health of our students who suffered quite a lot during the pandemic.

Menstrual Health

"Managing Life in COVID Times: Yoga Shows the Way"

Organizer: Dr Geetika Kalra (Sashakat Convener)

Resource Person: Dr Hansa Yogendra

Date: May 29, 2021

Number of Participants: 76

Webinar on: Keeping up with its responsibilities regarding women's health, the Society organized a webinar by Dr Hansa Yogendra on 'Managing Life in Covid Times: Yoga shows the way' on May 29, 2021. The pandemic has reiterated the need for taking care of our body and mind as our supreme duty. The resource person, Dr

Hansa Yogendra, from The Yoga Institute, Mumbai Maharashtra, is a very well-known personality in the field of yoga. She enlightened the members on the ways, good health, both physical and mental, can be maintained by following simple food habits and yogic exercises. She emphasized on the need of pranayam in keeping the body healthy.76 participants joined the webinar on google meet and almost equal number watched the live streaming on YouTube.

Talk on 'Empower HERstory'

Organizer: Dr Geetika Kalra (Sashakat Convener)

Resource Person: Ms. Anju Kumari

Date: October 29, 2018

Number of Participants: 67

Sashakt Committee organizedan interactive talk on Empower HER story on 29th October, 2018. The talk was delivered by Ms. Anju Kumari. She is an experienced corporate professional, motivational speaker and life skills trainer. The talk aimed to empower women and inspire them to achieve their goals and aspirations.She delivered an inspiring talk and was able to connect with the students with her strong motivational words. She could relate to the audience through real life experiences shared by her. She exuded energy and encouraged the students to reinvent themselves, love themselves first and follow their heart. During the talk, Ms. Kumari shared her personal story of overcoming challenges and adversity to pursue her dreams. She discussed the importance of education and how it helped her to break free from the constraints of her social and cultural background.Ms. Kumari also highlighted the need for gender equality and the role of women in shaping the future of society. She encouraged the audience to support and uplift each other, and to work towards creating a more inclusive and equitable world.

The talk was well-received by the audience, which consisted of students, faculty, and other members of the college community. It provided a platform for women to share their experiences and challenges, and to draw inspiration from Ms. Kumari's journey. Overall, the "Empower HER Story" talk by Ms. Anju Kumari was an insightful and motivational event that empowered women to overcome obstacles and achieve their full potential.

The talk was followed by interactive session where students' queries were answered. The talk aimed to empower women and inspire them to achieve their goals and aspirations.

3.3.1.1. Number of research papers in the Journals notified on UGC CARE list year wise during the last five years

SUPPORTING DOCUMENT FOR 3.3.1.1

3.3.1.1: Number of research papers in the Journals listed year wise during last five years. (Institute wise)

S. No.	Title of the Paper	Page No.
1	One-pot and catalyst-free synthesis of pyrroloquinolinediones and quinolinedicarboxylates	1
2	A robust replenishment model for deteriorating items considering ramp-type demand and inflation under fuzzy environment	2
3	Supply chain model with two storage facility for stock dependent demand incorporating learning and inflationary effect under crisp and fuzzy environment.	3
4	Inhibition of gut proteases and development of dengue vector, Aedes aegypti by Allium sativum protease inhibitor	4
5	Assessment of Achyranthes aspera induced toxicity and molecular analysis of RAPD-PCR profiles of larval genomic DNA of Aedes aegypti L. (Diptera: Culicidae)	5
6	A facile and rapid method for green synthesis of Achyranthes aspera stem extract-mediated silver nanocomposites with cidal potential against Aedes aegypti L. Saudi	6
7	Taxonomic and morphogenetic description of the freshwater ciliate Aponotohymena isoaustralis n. sp. (Ciliophora; Oxytrichidae) isolated from Sanjay lake, Delhi, India.	7
8	Diversity and abundance of ammonia-oxidizing bacteria and archaea in a freshwater recirculating aquaculture system	8
9	Beyond the "Code": a guide to the description and documentation of biodiversity in ciliated protists (Alveolata, Ciliophora)	9
10	Assessment of heavy metal toxicity in four species of freshwater ciliates (Spirotrichea; Ciliophora) from Delhi, India	10
11	Influence of copper and cadmium toxicity on the activity of an antioxidant enzyme, superoxide dismutase in freshwater ciliates	11
12	Assessment of Particulate Matter (PM)concentrations at a typical construction site in Bangalore, India.	12

13	Distinct detection of liquor ammonia by ZnO/SAW sensor: study of complete sensing mechanism.	13
14	Sensitivity Enhancement Studies of SAW vapor sensor by oscillator tuning using Varactor diode	14
15	Alterations in the reactive oxygen species in peripheral blood of chronic myeloid leukemia patients from Northern India	15
16	An analysis upon various strategies for redesign and direct evolution of enzyme engineering	16
17	Comparative study of removal of Cu and Pb from aqueous solution by using modified rice husk ask as an adsorbent	17
18	Developing a low cost activated carbon from agricultural waste for the removal of heavy metal from cotaminated waste	18
19	Sportsmen's energy package Cordyceps sinensis: Medicinal importance and responsible phytochemical constituents	19
20	Online signature verification: A review	20
21	Comparative analysis on path planning algorithm's on mobile robot in image processing	21
22	Impact of DDA optimization on mobile robot path planning for mixed image in image processing	22
23	Target assignment in robotics and its distance optimality using DDA optimization in image processing	23
24	Mobile robot path planning approach: A review	24
25	Architecture based on environmental monitoring system using zigbee wireless sensor networks	25
26	Low power consumption in zigbee wireless networks: A, review	26
27	Society and Sex Work in *The Autobiography of a Sex Worker by* Nalini Jameela.	27
28	The White Woman's Gaze	28
29	Free and open source software: A key enabler for digital India	29
30	Nanosecond Laser- Cluster Interactions at 109-1012 W/cm2	30
31	Pulse compression and self focusing of Gaussian laser pulses in plasma having relativistic ponderomotive nonlinearity	31
32	Detection of liquefied petroleum gas below lowest explosion limit (LEL) using nanostructured hexagonal strontium ferrite thin film	32
33	Growth and characterization of sol-gel processed rectangular shaped nanostructured ferric oxide thin film followed by humidity and gas sensing	33

34	LPG detection using SnO_2, PANI-SnO_2 and Ag-SnO_2 composite film fabricated by Chemical route	34
35	Preparation of PANI doped TiO_2 nanocomposite thin film and its relevance as room temperature liquefied petroleum gas sensor	35
36	Development of Fe_2O_3-PANI nanocomposite thin film based sensor for NO_2 detection	36
37	Self-compression of two co-propagating laser pulse having relativistic nonlinearity in plasma	37
38	Partially synchronized states in an ensemble of chemo-mechanical oscillators	38
39	Impact of *Ocimum basilicum* leaf essential oil on the survival and behaviour of an Indian strain of Dengue Vector, *Aedes aegypti L.*	39
40	*Pseudomonas aeruginosa:* Isolation, characterization and evaluation of larvicidal efficacy against *Aedes aegypti* L.	40
41	Bioprospecting xylanase enzymes from diverse ecological habitats	41
42	Purification and molecular characterization of chitinases from soil actinomycetes	42
43	Crystal structure of UDP-N-acetylglucosamine-enolpyruvate reductase (MurB) from Mycobacterium tuberculosis	43
44	Isolation and characterization of bacteriophages from India, with lytic activity against Mycobacterium tuberculosis.	44
45	Microwave assisted synthesis of spiro heterocyclic systems: A review	45
46	An analysis of replenishment model of deteriorating items with ramp-type demand and trade credit under the learning effect	46
47	Controlling room temperature ferromagnetism and band gap in ZnO nanostructured thin films by varying angle of implantation	47
48	Emamectin Benzoate: Potential larvicide and antifeedant agent against cotton boll worm Helicoverpa armigera (Lepidoptera: Noctuidae)	48
49	Sld5 Ensures centrosomal resistance to congression forces by preserving centriolar satellites.	49
50	The study of effect of various temperatures on the abundance of ammonia oxidizing archaea and bacteria.	50
51	Estimating the parameter of selected uniform population under the squared log error loss function	51
52	Cellular and molecular basis of heavy metal induced stress in ciliates: A review	52

53	Floral contrivances and specialised pollination mechanism strongly influence mixed mating in Wrightia tomentosa (Apocynaceae).	53
54	Relative contribution of reproductive attributes to the density-dependent effects on fruit-set.	54
55	Heteroleptic metal(II) complexes of curcumin and 2,2'-bipyridine: Synthesis, characterization, molecular modeling and preliminary antimicrobial investigation.	55
56	A highly selective sensor Cu2+ and Fe3+ ions in aqueous medium: Spectroscopic, computational and cell imaging studies.	56
57	A highly selective sensor Cu2+ and Fe3+ ions in aqueous medium: Spectroscopic, computational and cell imaging studies.	57
58	Protective effects of Aporosa octandra bark extract against D-galactose induced cognitive impairment and oxidative stress in mice.	58
59	Social Centrality using network hierarchy and community structure.	59
60	Bandwidth Efficient Broadcast Protocols in MANETs: A Review	60
61	Structural and optical properties of electrochemically deposited ZnOnanorods by using graphene oxide and ITO as substrate material: A comparative study	61
62	Comparison of water purification properties of Graphene Oxide (GO) Membranes with tuned interlayer spacings,	62
63	Sonication Effect on Graphene Oxide (GO) Membranes for Water Purification Applications"	63
64	Circular restricted three-body problem when both the primaries are heterogeneous spheroid of three layers and infinitesimal body varies its mass	64
65	An EOQ Model for Deteriorating Items with Selling Price Dependent Exponential Demand for Time Varying Holding and Deterioration Costs	65
66	A production inventory model with selling price and stock sensitive demand under partial backlogging	66
67	Susceptability status of Aedes aegypti L. against different classes of insecticides in New Delhi, India to formulate mosquito control strategy in fields.	67
68	Effects of Achyranthes aspera extracts on the survival and midgut histo-architecture of Aedes aegypti L. early IV instars.	68
69	Growth regulatory and growth inhibitory effects of Thevetia neriifolia stem extracts on Helicoverpa armigera (Lepidoptera: Noctuidae).	69

70	Modelling of Pinning-Depinning Reversal Mechanism in Ion-Irradiated Co/Al2O3 Thin Films.	70
71	Polarization dependent charge control model for microwave performance assessment of AlGaN/GaN/AlGaN double heterostructure HEMTs	71
72	Larvicidal activities of petroleum ether extracts of different fruit peel wastes against an Indian strain of filarial vector, *Culex quinquefasciatus* Say (Diptera: Culicidae)	72
73	Role of gold and silver nanoparticles in cancer nano-medicine	73
74	Gauging the nature and magnitude of Particulate Matter (PM) concentrations in Bengaluru, the IT capital of India	74
75	A concise synthesis of 2-ALKENYL-3- phenyl-4H-chromen-4-ones via novel C-C bond formation using sulfone as potential intermediate	75
76	Geometry of the Large Magellanic Cloud using multiwavelength photometry of classical Cepheids	76
77	Adoption of Free and Open Source Software in India,	77
78	Spherical growth of nanostructures ZnO based optical sensing and photovoltaic application	78
79	Study of electrical, dielectric and EMI shielding behavior of copper metal, copper ferrite and PVDF composite	79
80	Zn-Doped TiO_2 Nanoparticles Employed as Room Temperature Liquefied Petroleum Gas Sensor	80
81	Synthesis and investigation of cubical shaped barium titanate and its application as opto-electronic humidity sensor	81
82	Less toxic tin incorporated perovskite solar cell using polymer electrolyte processed in the air	82
83	Sol-gel formed spherical nanostructured titania based liquefied petroleum gas sensor	83
84	ZnO nanoneedle structure based dye-sensitized solar cell utilizing solid polymer electrolyte	84
85	Enhancement in self-compression due to co-propagating laser pulse in plasma	85
86	Dynamics of focused femtosecond Laser Pulse during photodisruption of crystalline lens	86
87	Potential of Nardostachys jatamansi extracts to manage Indian strain of Aedes aegypti: A novel approach for vector control.	87

3.3.1 Number of papers published per teacher in the Journals notified on UGC website during the last five years (5)

S.No.	Title of paper	Name of the author/s	Department of	Name of journal	Year of	ISSN number	Link to the recognition in UGC	Link to paper/ abstract of the article	Provide the link to Journal website	Indicate Journal's indexing
	a	b	c	d	e	f	g	h	i	j
1	**One-pot and catalyst-free synthesis of pyrroloquinolinediones and quinolinedicarboxylates**	Zhang, X., **Dhawan, G.**, Muthengi, A., Liu, S., Wang, W., Legris, M., & Zhang, W.	Biomedical Science	Green Chemistry	2017	1463-9262	https://doi.org/10.1039/C7GC01380A	https://pubs.rsc.org/en/content/articlelanding/2017/GC/C7GC01380A	https://mjl.clarivate.com:/search-results?issn=1463-9262&hide_exact_match_fl=tru	Indexed in UGC Care List, SCOPUS and Web of Science
2	**A robust replenishment model for deteriorating items considering ramp-type demand and inflation under fuzzy environment**	Sharma, A., Sharma, U., & **Singh, C.**	Mathematics	International Journal of Logistics Systems	2017	17427967	https://doi.org/10.1504/IJLSM.2017.086944	https://www.inderscienceonline.com/doi/abs/10.1504/IJLSM.2017.086944	https://www.scopus.com/sourceid/4700151504	Indexed in UGC Care List and SCOPUS
3	**Supply chain model with two storage facility for stock dependent demand incorporating learning and inflationary effect under crisp and fuzzy environment.**	**Singh, C.**, & Singh, S. R.	Mathematics	International Journal of Fuzzy System Applicatio	2017	2156-177X	10.4018/IJFSA.2017040105	https://www.igi-global.com/gateway/article/179322#pnlRecommendationForm	https://www.scopus.com/sourceid/21100301444	Indexed in UGC Care List and SCOPUS
4	**Inhibition of gut proteases and development of dengue vector, Aedes aegypti by Allium sativum protease inhibitor**	Shamsi, T. N., Parveen, R., Ahmad, A., Samal, R. R., **Kumar, S.**, & Fatima, S.	Zoology	Acta Ecologica Sinica	2017	1872-2032	https://doi.org/10.1016/j.chnaes.2018.01.002	https://www.sciencedirect.com/science/article/abs/pii/S1872203217301695	https://mjl.clarivate.com/search-results?issn=1000-0933&hide_exact_match_fl=tru	Indexed in UGC Care List, SCOPUS and Web of Science
5	**Assessment of Achyranthes aspera induced toxicity and molecular analysis of RAPD-PCR profiles of larval genomic DNA of Aedes aegypti L. (Diptera: Culicidae)**	**Sharma, A.**, Kumar, S., & Tripathi, P.	Zoology	Journal of Parasitic Diseases	2017	0971-7196	https://doi.org/10.1007/s12639-017-0935-1	https://link.springer.com/article/10.1007/s12639-017-0935-1	https://mjl.clarivate.com:/search-results?issn=0971-7196&hide_exact_match_fl=tru	Indexed in UGC Care List, SCOPUS and Web of Science
6	**A facile and rapid method for green synthesis of Achyranthes aspera stem extract-mediated silver nanocomposites with cidal potential against Aedes aegypti L.**	Sharma, A., **Kumar, S.**, & Tripathi, P	Zoology	Saudi Journal of Biological Sciences	2017	1319-562X	https://doi.org/10.1016/j.sjbs.2017.11.001	https://www.sciencedirect.com/science/article/pii/S1319562X17302759	https://mjl.clarivate.com:/search-results?issn=1319-562X&hide_exact_match_fl=tru	Indexed in UGC Care List, SCOPUS and Web of Science
7	**Taxonomic and morphogenetic description of the freshwater ciliate Aponotohymena isoaustralis n. sp. (Ciliophora; Oxytrichidae) isolated from Sanjay lake, Delhi,**	Gupta, R., **Abraham, J.** S., Sripoorna, S., Toteja, R., Makhija, S., & El-Serehy, H.	Zoology	Acta Protozoologica	2017	0065-1583	10.4467/16890027AP.17.008.7483	https://www.proquest.com/openview/14a339a68fe019b3b23e8a868614850f/1?pq-origsite=gscholar&c	https://mjl.clarivate.com:/search-results?issn=0065-1583&hide_exact_match_fl=tru	Indexed in UGC Care List, SCOPUS and Web of Science

8	**Diversity and abundance of ammonia-oxidizing bacteria and archaea in a freshwater recirculating aquaculture system**	**Khangembam, C. D.**, Sharma, J. G., & Chakrabarti, R.	Zoology	Hayati Journal of Biosciences,	2017	2053-9711	https://doi.org/10.1016/j.hjb.2017.11.003	https://www.sciencedirect.com/science/article/pii/S1978301917301596	https://mjl.clarivate.com:/search-results?issn=2053-9711&hide_exact_match_fl=tru	Indexed in UGC Care List and SCOPUS
9	**Beyond the "Code": a guide to the description and documentation of biodiversity in ciliated protists (Alveolata, Ciliophora)**	Warren, A., Patterson, D. J., Dunthorn, M., Clamp, J. C., Achilles-Day, U. E. M.,	Zoology	Journal of eukaryotic Microbiology,	2017	1066-5234	https://doi.org/10.1111/jeu.12391	https://onlinelibrary.wiley.com/doi/10.1111/jeu.12391	https://mjl.clarivate.com:/search-results?issn=1066-5234&hide_exact_match_fl=tru	Indexed in UGC Care List, SCOPUS and Web of Science
10	**Assessment of heavy metal toxicity in four species of freshwater ciliates (Spirotrichea; Ciliophora) from Delhi, India**	**Abraham, J.** S., Sripoorna, S., Choudhary, A., Toteja, R., Gupta, R., Makhija, S., &	Zoology	Current Science	2017	0011-3891	https://www.jstor.org/stable/26494927 / https://www.ugc.ac.in/pdfnews/8919877	https://www.currentscience.ac.in/Volumes/113/11/2141.pdf	https://mjl.clarivate.com:/search-results?issn=0011-3891&hide_exact_match_fl=tru	Indexed in UGC Care List, SCOPUS and Web of Science
11	**Influence of copper and cadmium toxicity on the activity of an antioxidant enzyme, superoxide dismutase in freshwater ciliates**	Toteja, R., Makhija, S., Sripoorna, S., **Abraham**, J. S. & Gupta, R	Zoology	Indian Journal of Experimental Biology	2017	0019-5189	https://nopr.niscpr.res.in/handle/123456789/42844 / https://www.ugc.ac.in/pdfne	http://nopr.niscpr.res.in/bitstream/123456789/42844/1/IJEB%2055%2810%29%20694-701.pdf	https://mjl.clarivate.com:/search-results?issn=0019-5189&hide_exact_match_fl=tru	Indexed in UGC Care List and Web of Science

Abstract

A method for the catalyst-free synthesis of pyrroloquinolinediones and quinolinedicarboxylates is developed through a one-pot synthesis involving denitrogenation of azide, benzisoxazole formation, aza-Diels–Alder cycloaddition, and dehydrative aromatization. Only stoichiometric amounts of N_2 and H_2O are produced as by-products. A comprehensive green chemistry metrics analysis indicated that this method is much more efficient and greener than two reported methods for the synthesis of pyrroloquinolinediones.

A robust replenishment model for deteriorating items considering ramp-type demand and inflation under fuzzy environment

Archana Sharma, Usha Sharma and Chaman Singh

Published Online: October 6, 2017 • pp 287-307 • https://doi.org/10.1504/IJLSM.2017.086944

ABOUT

Abstract

Supply chain performance directly depends on demand pattern, inventory management and control strategies of organisations apart from other supply chain activities. Effective replenishment policy can increase the performance of logistics and supply chain activities and customer satisfaction. Optimal inventory model can also reduce overall replenishment cost and improve financial performance of the organisation. This study focuses on developing a replenishment model for deteriorating products with ramp-type demand rate under the consideration of inflation and partial backlogging. The nature of the demand function is a piecewise exponential function. The proposed model is developed under fuzzy environment, which can easily handle uncertainty and impreciseness associated with parameters. The illustrative numerical example has given in crisp as well as in fuzzy sense to demonstrate the solution procedure for the proposed approach. Sensitivity analysis is also performed to check the robustness of the proposed model.

Abstract

In this paper, a supply chain model with power form stock-dependent demand rate is developed, incorporating the effect of learning and inflationary environment. In order to bring their research closer to reality, all the cost parameters involved in the model are considered fuzzy in nature. The demand rate is assumed to be a polynomial form of current inventory level in Own-warehouse. To display the items, retailer has one warehouse of finite capacity, treated as own warehouse (OW) and may hire another warehouse of large capacity, treated as rented warehouse (RW) to storage the excess inventory. Learning effect is incorporated on retailer's selling price, purchasing cost, part of holding cost, deterioration cost and ordering cost. Proposed model is illustrated with some numerical example along with sensitivity analysis of parameters.

Abstract

The paper describes the bio efficacy of a protease inhibitor; isolated from *Allium sativum* '*garlic*' (ASPI); against Aedes aegypti mosquito, a well-known transmitter of dengue and Chikungunya. The purification of protease inhibitor from *Allium sativum* '*garlic*' (ASPI) was carried out by ammonium sulfate precipitation followed by Fast Protein Liquid Chromatography using akta DEAE-Cellulose column. The protein fraction demonstrating trypsin inhibitory activity was further evaluated for its insecticidal activity using gut protease inhibition assay and larvicidal assay. ASPI is an inhibitor of porcine trypsin (IC_{50} of 650.726 μg/mL) and has molecular weight of ~15 kDa determined by SDS PAGE similar to other inhibitors of the Kunitz-type family (14–26 kDa). ASPI demonstrated 50% reduced activity of *Ae. aegypti* midgut proteases and showed a dose-dependent acute toxicity on *Ae. aegypti* 3rd instars exhibiting LC_{50} value of ~50.827 μg/mL. After ten days of larval exposure ASPI resulted in a 24-h delay of larval development and ~72% mortality at 61.5 μg/mL. These results suggest that ASPI may serve as potent insecticida

Abstract

Current studies investigated the anti-mosquito potential of *Achyranthes aspera* against the dengue vector, *Aedes aegypti*. The stems and leaves of *A. aspera* were extracted in hexane and evaluated for their toxicity against early fourth instars of *A. aegypti*. The larvicidal efficacy of the extract was validated as per WHO protocol. The mortality counts were made after 24 h and LC values were calculated at different levels. The adverse impact of extracts was also explored on the larval genomic DNA. The larvae were exposed to extracts at LC_{50} levels and the alterations in *g*-DNA was evaluated through RAPD-PCR technique using three random primers; MA-09, MA-12 and MA-26. Our investigations ascertained the larvicidal efficacy of both the leaf and stem extracts of *A. aspera* resulting in respective LC_{50} values of 0.068 and 0.082 mg/mL. The extracts also caused variable genotoxic effects with significant changes in the RAPD profiles. The results showed appreciable modifications in larval *g*-DNA with loss of certain bands and gain of unique bands with 82.35% DNA polymorphism. These alterations suggest the probable DNA damage and mutations in the larval *g*-DNA caused by certain phytocomponents which could be the possible reason of larval mortality. Our studies evidenced the anti-mosquito potential of *A. aspera* extracts against *A. aegypti* causing appreciable larval mortality and significant changes in *g*-DNA. The *A. aspera* extracts are suggested as efficient and eco-friendly control agent against *A. aegypti*, yet further investigations are needed to identify the bioactive constituent and ascertain its effectiveness in the field conditions.

Abstract

Aedes aegypti L. is the primary vector associated with transmission of globally concerned diseases; Zika, yellow fever, dengue and Chikungunya. Present study investigates an efficient, alternative and comparative approach for mosquito control which is safe to environment and non-target organisms. The silver nano-composites (AgNCs) were synthesized from the aqueous stem extract of *Achyranthes aspera* (AASE) using different concentration of aqueous silver nitrate ($AgNO_3$). The synthesis was tracked by UV-vis spectrophotometer and particle size analyser (DLS). The evaluation of their larvicidal potential against early fourth instars of *Ae. aegypti* showed significant potency, the toxicity increasing with the concentration of silver nitrate. The 24, 48 and 72 h bioassays resulted in respective LC_{50} values of 26.693, 1.113 and 0.610 µg/mL (3 mM AASE-$AgNO_3$) 9.119, 0.420 and 0.407 µg/mL (4 mM AASE-$AgNO_3$) and that of 4.283, 0.3 and 0.248 µg/mL (5 mM AASE-$AgNO_3$). Keeping in view the significantly high larvicidal efficiency at lower concentration of silver nitrate, the 4 mM nano-composites were selected over 5 mM composites for further biophysical characterization carried out by X-ray Diffraction (XRD), Fourier transform infrared spectrometer (FTIR), Scanning electron microscopy (SEM), Energy dispersive X-ray (EDX) spectroscopy and Transmission electron microscopy (TEM). SEM and TEM confirmed the synthesis of spherical poly-dispersed AgNCs with average size ranging from 1–30 nm. Characterization through XRD showed the crystalline face-centered-cubic (fcc) structure of AgNCs with the highest intense peak obtained at 2θ value of 31.82°. FT-IR data suggests complex nature of AgNCs showing clearly defined peaks in different ranges. The present investigations recommend AgNCs of *A. aspera* stems as a low-cost and eco-friendly alternative to chemical insecticides for mosquito control.

Abstract

The role of ammonia-oxidizing bacteria and archaea was evaluated using *amoA* gene in a freshwater recirculating system. Broken earthen pot pieces (BEP) were used as filter bed material. Five archaeal and four bacterial operational taxonomic units were retrieved from *amoA* genes. Shannon-Weiner and Simpson indices were higher in archaeal *amoA* sequence compared with the bacteria. Subtype diversity ratio and subtype diversity variance were 0.522 and 0.008, respectively, for archaea and 0.403 and 0.015, respectively, for bacteria. In archaea, 50% *amoA* sequences showed 99%–100% similarity with the known sequences of ammonia monooxygenase subunit A of uncultured archaeon clones and thaumarchaeote. In bacteria, 84% sequences showed 99% similarity with *amoA* sequences of different uncultured bacterial clone and Nitrosomonadaceae. Absolute quantification showed that the abundance of archaea was 12-fold higher compared with bacteria. In this recirculating system, ammonia-oxidizing archaea and bacteria played a major role; BEP supported the growth of these ammonia-oxidizing microorganisms.

Abstract

Recent advances in molecular technology have revolutionized research on all aspects of the biology of organisms, including ciliates, and created unprecedented opportunities for pursuing a more integrative approach to investigations of biodiversity. However, this goal is complicated by large gaps and inconsistencies that still exist in the foundation of basic information about biodiversity of ciliates. The present paper reviews issues relating to the taxonomy of ciliates and presents specific recommendations for best practice in the observation and documentation of their biodiversity. This effort stems from a workshop that explored ways to implement six Grand Challenges proposed by the International Research Coordination Network for Biodiversity of Ciliates (IRCN-BC). As part of its commitment to strengthening the knowledge base that supports research on biodiversity of ciliates, the IRCN-BC proposes to populate *The Ciliate Guide*, an online database, with biodiversity-related data and metadata to create a resource that will facilitate accurate taxonomic identifications and promote sharing of data.

THE nomenclature of ciliates and other heterotrophic protists (sensu Adl et al. 2012) is governed by the International Code of Zoological Nomenclature ("the Code") that provides rules for naming taxa up to the level of family (ICZN 1999). The Code regulates nomenclatural issues, and it also establishes minimal standards for documenting newly described species. These are deliberately general and suited more to the study of animals than protists. In particular, the rule to deposit type specimens in permanently curated repositories (ICZN 1999, Art. 16.4.2 and Art. 75.3.7) has, over time, generated a database of material that not only has fixed names but also has formed the nucleus of large museum collections. These collections provide a wealth of information about the variability and biogeography of species and represent a potential source of DNA for investigations of molecular phylogenetics.

For ciliates and many other protists, the logistical difficulties imposed by their small size meant there was no convention for depositing type specimens until the latter part of the 20th century, when deposition of permanently stained preparations or other physical specimens (e.g. on SEM stubs) began to be required as type material for taxonomic descriptions or redescriptions. In addition, new methods of visualizing morphology and sequencing genes have been introduced over the last several decades, but there are no formal standards for application of these methods to taxonomic identifications or descriptions of ciliates, despite recent recommendations (Aescht 2001, 2008; Foissner 2002; ICZN 1999; Lynn and Simpson

Assessment of heavy metal toxicity in four species of freshwater ciliates (Spirotrichea: Ciliophora) from Delhi, India

Jeeva Susan Abraham[1], S. Sripoorna[1], Ashish Choudhary[1], Ravi Toteja[1], Renu Gupta[2], Seema Makhija[1,*] and Alan Warren[3]

[1]Acharya Narendra Dev College, University of Delhi, Delhi 110 019, India
[2]Maitreyi College, University of Delhi, Delhi 110 021, India
[3]Department of Life Sciences, Natural History Museum, London, SW7 5BD, UK

In vitro **laboratory experiments were conducted to determine the toxicity (per cent survival and LC_{50}) of essential and non-essential heavy metals (cadmium, copper, nickel, lead and zinc) in four spirotrich ciliates: *Euplotes* sp., *Notohymena* sp., *Pseudourostyla* sp. and *Tetmemena* sp. isolated from three different freshwater ecosystems in the Delhi region, India. The toxicity of the heavy metals was found to vary among the different ciliates. Copper was most toxic (24 h-LC_{50} value ranged between 0.125 and 0.74 mg/l) and zinc was least toxic (24 h LC_{50} value ranged between 46.98 and 144.32 mg/l) to each of the ciliates. Of the four ciliates, *Notohymena* sp. had the highest tolerance limit to three heavy metals (Cu, Cd and Pb) out of the five tested. This study shows the high potentiality of using freshwater ciliates for monitoring the intensity and potency of ecological damage caused by heavy metals in aquatic ecosystems.**

Keywords: Ciliates, freshwater, heavy metals, toxicity.

THERE is a global increase in the concentration of heavy metals in the environment mainly due to anthropogenic activities and India is no exception to this[1]. Although some heavy metals are essential micronutrients, all may be toxic if present in sufficiently high concentration in a bioavailable form, mainly as a result of metabolic interference and mutagenesis. The presence of heavy metals in aquatic environments is a major concern because of their threat to plant and animal life, thus disturbing the natural ecological balance[2]. Many freshwater ecosystems, including lakes, ponds, rivers and reservoirs are exposed to heavy metal contamination from a range of sources, primarily wastewater discharges from industry and households[3,4]. Most of the heavy metals have a long half-life and cannot be degraded, but may instead bio-accumulate throughout the food chain leading to physiological stress causing ecological disturbance[5–7].

*For correspondence (e-mail: seemamakhija@andc.du.ac.in)

Toxicity of various heavy metals can be studied using ciliated protists[8–10]. These eukaryotic microorganisms are found in a variety of trophic niches, have generation time of 3–7 h and many are easy to culture *in vitro*[11]. Ciliates share a higher degree of functional and genetic similarities with humans than bacteria or yeast (microbial eukaryotic model organism)[12–14]. All these properties make them suitable candidates both for eco-toxicological studies and for monitoring water quality[15–17].

In the present study, we assess the toxicity of essential (Cu and Zn) and non-essential (Cd, Ni and Pb) heavy metals on ciliated protists isolated from three different freshwater ecosystems (river, lake and pond) in the Delhi region, India. The diversity of free-living ciliates in the study sites was observed for a period of one year. The most frequently encountered ciliate species were from four genera, namely *Euplotes*, *Notohymena*, *Pseudourostyla* and *Tetmemena* (Figure 1) and all were easily cultured under laboratory conditions. Toxicity assays were carried out *in vitro* in order to determine the sensitivity and survival of *Euplotes* sp., *Notohymena* sp., *Pseudourostyla* sp. and *Tetmemena* sp. to different doses of heavy metals.

Though metals are biologically important, increase in the threshold concentration of heavy metal in the environment may interfere with the metabolic activity of organisms. Heavy metal stress induces production of reactive oxygen species (ROS) *viz.* hydroxyl radical, superoxide radical or hydrogen peroxide (H_2O_2). Various antioxidant enzymes such as superoxide dismutase, ascorbate peroxidase, catalase, glutathione peroxidase and peroxiredoxin of SOD-ascorbate-glutathione cycle get activated during such stress. These enzymes are involved in ROS detoxification , and thereby protect the cells from oxidative stress. In this study, we explored activity of the antioxidant enzyme, superoxide dismutase (SOD) in the presence of heavy metals i.e., Cu and Cd in three freshwater ciliates, *Tetmemena* sp., *Notohymena* sp. and *Euplotes* sp. Heavy metals negatively affected the population growth of chosen ciliates which was measured as 24 h-LC_{50}. The 24 h-LC_{50} doses of Cu and Cd, respectively were 0.14 and 2.44 mg/L for *Tetmemena* sp.; 0.74 and 5.06 mg/L for *Notohymena* sp.; and 0.17 and 2.24 mg/L for *Euplotes* sp. The levels of SOD were found to be significantly higher in the presence of Cu and Cd. Interestingly, exposure with Cu increased the SOD level at LC_{30} and LC_{50} doses, however, at higher concentration of Cu (i.e., LC_{70} dose), SOD level decreased. The results suggest that SOD may be used as an effective enzymatic biomarker to evaluate the toxic effects of heavy metals in the ciliate species.

Keywords: *Euplotes* sp., Heavy metal stress, *Notohymena*, Oxidative stress, ROS, SOD, Spirotrich ciliates, *Tetmemena* sp.

Heavy metals increase reactive oxygen species (ROS) production and eventually induce oxidative stress in both aquatic and terrestrial organisms[1-6]. Heavy metals with redox activity (Fe, Cu) are directly involved in ROS production by Fenton/Haber-Weiss reaction or by autoxidation. Also, metals with non-redox activity (Cd, Zn, Hg) can produce ROS indirectly by blocking the cellular antioxidant defenses[7,8]. ROS (such as superoxide radicals, hydrogen peroxides and hydroxyl ions) are involved in various pathological processes including lipid peroxidation[9,10]. These radicals cause much of the tissue damage resulting from inflammation and can eventually induce cell death by apoptosis/ necrosis[10,11]. Cells under oxidative stress show various dysfunctions due to significant changes caused by ROS on proteins, DNA and cellular lipids[2,11]. Various anti-oxidant enzymes (such as superoxide dismutase, ascorbate peroxidase, catalase glutathione peroxidase and peroxiredoxin) are known to be involved in ROS detoxification (Fig. 1) and in protecting the cells from oxidative stress[7,12].

Superoxide dismutase (SOD), which gets activated in response to oxidative stress at first, plays a major role in catalyzing the dismutation of superoxide anion ($O_2^{\cdot-}$) into O_2 and H_2O_2[13,14]. SOD exists in several isoforms including cytosolic copper-zinc SOD (SOD-1), mitochondrial manganese SOD (SOD-2)[15] and extracellular/chloroplast iron SOD (SOD-3)[14,16].

A major hydrogen peroxide (H_2O_2) detoxifying system in the cells is ascorbate-glutathione cycle, where ascorbate peroxidase (APx) plays a key role in catalyzing H_2O_2 into H_2O using ascorbate as a specific electron donor[12]. GSH is a tripeptide (L-γ-glutamyl-L-cysteinylglycine) synthesized in two consecutive steps catalyzed by γ-glutamyl-cysteine synthase and glutathione synthetase[17]. GSH also acts as substrate for glutathione peroxidase (GPx) to catalyze hydrogen peroxide[7]. Changes in these antioxidant enzymes including ASC-GSH cycle enzymes have been observed in various organisms exposed to different abiotic stress including heavy metals. Overexpression of any of these enzymes by a particular organism has shown higher resistance to the abiotic stress as compared to the organisms under-expressing these enzymes[18,19]. Studies on heavy metal induced oxidative stress and generation of ROS have

Abstract

Construction sites pose a major challenge to the environment due to presence of different types of particulate matter (PM). Concentration of particulate matter is a typical indicator for urban air quality. Although it has long been recognised that construction activities are a pertinent source of PM emissions, not much research has gone in this direction. The investigation envisages quantification of the PM emissions at a construction site for particulates having varying aerodynamic diametersfine particles 2.5 &

Abstract

ZnO/SAW sensor was reported to give distinct response towards liquor ammonia. To study the complete mechanism, ZnO thin films (40 nm) were deposited using rf sputtering in different reactive gas composition of argon and oxygen. The increase in oxygen content (30–100%) during film growth leads to decrease in the value of stress and bond energy. The individual contribution of different SAW sensing mechanisms such as mass loading, elastic effects and acousto-electric interaction, was evaluated and analyzed to understand the distinct response for liquor ammonia. It was found that mass loading seems to get affected by the presence of stress whereas elastic loading was affected by the crystallite size and bond energy (Zn—O) in ZnO thin films.

Sensitivity Enhancement Studies of SAW Vapor Sensor by Oscillator Tuning Using Varactor Diode

Abstract:

This paper reports the designing of surface acoustic wave (SAW) oscillator with varactor diode (or varicap) as a part of tuning element. A practical way to enhance sensitivity of SAW sensor oscillator is performed by tuning capacitance using varicap. The varactor diode is placed at three different locations of the oscillator circuit to realize three different configurations. The change in frequency with applied voltage to varactor diode is studied for all three configurations. Sensitivity study for the three configurations is carried out with di-methyl methyl phosphonate vapor. The sensitivity, stability, and noise of each configuration are analyzed. Using varicap, about six times enhancement in sensitivity (~1.15 kHz/ppm) could be achieved. A simple and additive electronic method of tuning is utilized to improve sensitivity as compared with other methods that involve major changes in the sensor.

Introduction

There is a significant difference in the Reactive Oxygen Species (ROS) levels of Chronic Myeloid Leukaemia (CML) patients before and during treatment with Tyrosine Kinase Inhibitors (TKIs). This is because high ROS levels support oncogenic phenotype of CML by inducing proliferation pathway and accumulation of further genetic mutations. Often the measurement is done on WBC or serum for ascertaining one type of ROS species, but measurement of global ROS in fresh whole blood will give more accurate estimation of ROS.

ABSTRACT

Enzymes are biocatalysts evolved in nature to achieve the speed and coordination of nearly all the chemical reactions that define cellular metabolism necessary to develop and maintain life. The application of biocatalysis is growing rapidly, since enzymes offer potential for many exciting applications in industry. The advent of whole genome sequencing projects enabled new approaches for biocatalyst development, based on specialised methods for enzyme heterologous expression and engineering. The engineering of enzymes with altered activity, specificity and stability, using sitedirected mutagenesis and directed evolution techniques are now well established.

The use of enzymes in industrial applications has been recognised for providing clean processes with minimal impact on the environment. Enzyme engineering is undergoing the most profound and exciting transformation in its history. It promises unprecedented expansion in the scope and applicat[illegible]f modified or improved enzymes with desired physi[illegible]l catalytic properties. Two complementary strategies are cu[illegible]ly available: rational redesign and directed evolution. Although

Comparative study of Removal of Cu and Pb from Aqueous Solution by using Rice Husk Ash as an Adsorbent

[1]Ravi kumar, [2]Dinesh Kumar Arya and [3]Nouratan Singh
[1]Department of Chemistry, OPJS University, Churu, Rajasthan, India [2]Acharya Narendra Dev College Govind Puri, Kalkaji New Delhi-110019 [3]Scientific and Applied Research Center [SARC], Meerut, Uttar Pradesh, India.

Abstract:- The adsorption efficiency of Rice husk ash powder for the removal of Cu and Pb was studied as Rice husk ash consist of silica , alumina , mangnesium oxide , calcium oxide etc. The research is a batch scale experiment using different amount of adsorbent in solution with five different concentrations (5, 10, 15, 45,100 mg/L) of both metals and in mixed combination. About 92% to 100% Cu removal achieved by using 0.5 to 1.5 g adsorbent for solution having concentration of 5 and 10 mg/L of Cu. Two main things comes out by the above study, first, the adsorption efficiency depends on the amount of adsorbent as the adsorption efficiency of Pb was increased from 80% to 100% in the same solution (5mg/L). it was also found that adsorption efficiency decreased about 2.5 % and 5.8% of Cu and Pb to mixed metal solution, which clearly indicates that the presence of more metals in the solution will decrease the adsorption efficiency.

I. INTRODUCTION

The release of industrial effluents containing heavy metals to the river water causes several adverse effects. Water is essential to all forms of life and makes up 50-96 % of the weight of all plants and animals. It is also a vital resource for agriculture, manufacturing and other human activities. In urban areas, the careless disposal of industrial effluents and other wastes in rivers & lakes may contribute greatly to the poor quality of river water [1-4]. African countries and Asian countries experiencing rapid industrial growth and this are making environmental conservation a difficult task[5] . Heavy metals are dangerous environmental pollutants due to their toxicity and strong tendency to concentrate in environment and in food chains[6-7] . The source of environmental pollution with heavy metals is mainly industry, i.e. metallurgical, electroplating, metal finishing industries, tanneries, chemical manufacturing, mine drainage and battery manufacturing [8]. Considerable research been carried out over the last decade on the protection against plant and animal life degradation. Several big cities contribute to increase this problem, as they are sources of industrial effluents. In order to reduce the environmental pollution, a number of studies been considered to minimize the problems caused by the commonly employed treatment of metal bearing effluents [9-10]. Removal of metals from wastewater achieved principally by the application of several processes such as adsorption[6], sedimentation[11], electrochemical processes[12], ion exchange[13] ,cementation[14], coagulation/flocculation[15] , filtration and membrane processes[16] Chemical precipitation and solvent extraction[17-18] . Adsorption is the one of the important procedure for the removal of heavy metals from the environment because of strong affinity and high loading capacity. Moradabad also known as Brass City of India situated at a distance of 167 km from the national capital, New Delhi (NH 24), on the bank of river Ramganga and located at 28.830 N 780 E. It has an average elevation of 186 meters (610 feet) above sea level. The city has seen rapid industrialization during last few decades. The city is full of brass and steel industries. Most of these industries are in unorganized sector and thus have unplanned growth leaving to high degree of air, water and soil pollution[19-20] . The most of the industries are dumping their effluents in Ram Ganga River pass from the heart of the city. A large number of small-scale manufacturing units of brass been also situated in the heart of the city. As Copper, Zinc & Lead and its compounds used in brass industries, the continued intake of copper and lead by humans leads to severe diseases like mucosal irritation, depression and most dangerous lung cancer. Therefore, there is a considerable need to treat industrial effluents containing such heavy metals prior to discharge to protect public health. The metal needs to be removed from industrial effluents before discharge into the environment to minimize any impact on plant, animal and human beings. In the present study, adsorption potential of low cost adsorbent (Rice husk ash) towards Cu and Pb has been examined.

II. MATERIAL AND METHODS:

Adsorbents The RHA from Amrit Vanaspati Company Ltd Punjab, India. It was washed with distilled water until the pH was constant, dried in an oven at 105°C for 24 h. It was cooled in incubator and determined its size distribution by USA Standard Sieve (≤125, 125-250, 250-500 μm). The size distribution results are shown in Table 1. Thus, studied particle size was 250-500 μm. Preparation of Modified Rice Husk Ash

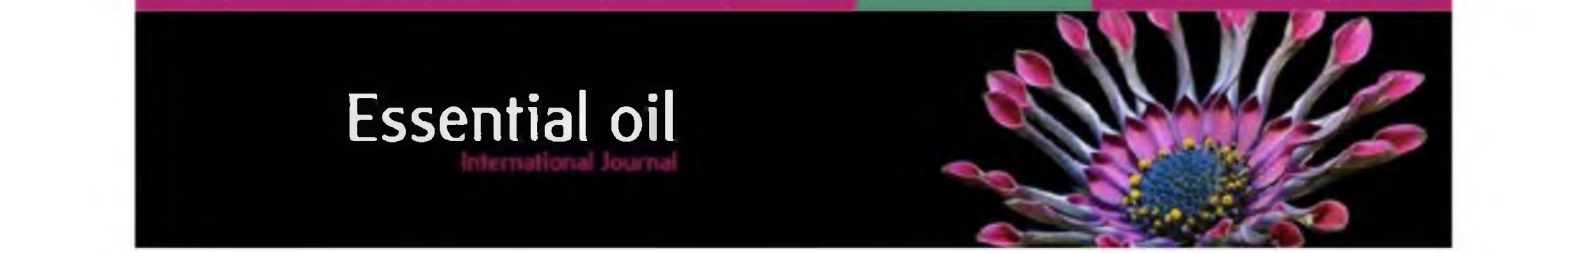
Abstract



Rice husk ash is find out from the burning of agricultural waste material in paper industry due to it abundantly available in rice-producing countries. Activated carbon of rice husk (ACRH) was used to remove Cr(VI) from waste water. In this study we also use of the Batch process for study of the effect activated carbon of rice husk for Cr(VI) removal from aqueous solutions. In this paper we also studies of pH effect, contact time, adsorbent dose were examined. The removal decreased from 86.2 to 44.2% by increasing the Cr(VI) concentration from 1.5 to 5.0 mg/l. Removal, however, decreased from 80.0 to 42.2% by increasing the adsorbent particle size from 50 µm to 150 µm. The adsorbed dose of Cr(VI) tend to increase with the increase of pH. It has been found that low cost and high capabilities of the ACRH make it potentially attractive adsorbent for the removal of Cr (VI) from wastewater.

Keywords: Removal; Rice Husk ; Adsorption ; pH; water; Activated Carbon of rice husk etc.

INTRODUCTION

Chromium is an important heavy metal, and it is generally used in leather industry, electroplating, metal processing and paint and pigment. Removal of heavy metals by adsorption is an turn up field of research [5], Activated carbon is an effective adsorbent

Sportsmen's energy package *Cordyceps sinensis*: Medicinal importance and responsible phytochemical constituents

AUTHOR(S): Yogesh Chandra Joshi, Mukesh Chandra Joshi, Vivek Chopra, Rakesh Kumar Joshi, Rajni Kant Sharma and Vikrant Kumar

ABSTRACT:
Yarsagumba (*Cordyceps sinensis*) is one of the world rarest fungal species that parasites on the body of a caterpillar of a moth and found underground of alpine grass at high altitude. The *Cordyceps sinensis* is known as "summer plant and winter insect" or "*half*-caterpillar-*half*-mushroom". This fungus used for various medicinal purposes, caring diseases and specially used as a food product in China and south Asian countries. It contains various biologically active pharmacophores which helps to maintain the health and body. Reports say that, the regular use of *Cordyceps*, is very useful for sportsperson to maintain their body balance, endurance, strength, and to make healthy body weight etc. On the basis of scientific and manmade facts, we tried to summarise, why *Cordyceps* is recommended to sport person as a physical booster. It contains various bioactive pharmacophores including essential oil, which are medicinally important. Thus body always looks for such type of dietary supplements.

Online Signature Verification: A Review

Urvashi Chaudhary, Chandra Kanta Samal[2], Vinesh Kumar[3]
[1]*Department of Electrical Engineering, IIT Delhi, Department of Computer Science, Acharya Narender Dev College University of Delhi, Delhi*

Abstract: *In past few decades Online Signature Verification have been employed in many applications such as security control, banking, law enforcement etc. A number of techniques have been proposed in the realization of reliable signature verification system such as Dynamic Time Wrapping (DTW), Hidden Markov Model (HMM), Support Vector Machine (SVM) and Neural Networks (NN)In this paper we have presented a review of research carried out in recent field of online signature verification and made a qualitative analysis of these state-of-the-art approaches.*

Keywords: *Signatures, Verification, fraudulence, feature Extraction, training, Forgery*

I. Introduction

Biometrics is the utilization of physiological traits (face, iris, and fingerprint) or behavioral traits (signature, voice) for the verification of an individual identity. Biometric based authentication system is a trustable alternative to the password-based security systems as it is relatively hard to be forgotten, stolen, or guessed.

Signature being a behavioural biometric it is mainly used in the banks to verify the checks and accounts. Unlike physiological biometrics, it is fraught with problem of change over a time and it is not difficult to forge. One of the main challenges in signature verification is related to the signature variability. While signatures from the same user show considerable differences between different captures (high intra-class variability), skilled forgers can perform signatures with high resemblance to the user's signature (low intra- class variability). Signature verification aims at using such properties for making reliable authentication. However the wide spread acceptance of the signature by the public makes it more suitable for certain lower-security authentication needs. However, signature verification is a challenging task due to practical constraints. For instance, MasterCard estimates a $450 million loss each year due to credit card fraud, likewise some billions of dollars being lost because of fraudulent encashment of checks. Reliable automatic signature verification could be a proper solution to reduce such losses since handwritten signatures are already involved in the credit card transactions and bank checks encashment.

1.1 The Signature Verification Modes

There are two modes to the signature verification depending on how the signatures are collected from a user.

Offline (static) Signature Verification: In this mode data is acquired by scanning handwritten signatures which are then processed as static images. The verification is based on these static signature images. This mode is useful in automatic verification of signatures obtained from bank checks and other paper documents.

Online (dynamic) Signature Verification: In this mode the signatures are captured by social hardware (e.g. smart pens or pressure sensitive tablets) which is capable of measuring dynamic properties of a signature in addition to the shape, while shape is the only information in offline signatures. Dynamic information (e.g. pen pressure) makes the signature more unique and more difficult to forge.

Applications of online signature verification include identity verification in payments using a credit card; authorization of computer users for accessing sensitive data or programs, authentication of individuals for accessing physical devices or buildings, and protection of small personal devices from unauthorized usage.

Online signature verification is more robust, reliable and accurate than offline signature verification as its dynamic properties make the process of forging an online signature more difficult. Therefore online signature has become an attractive biometric method as it facilitates the authentication of the internet transactions and contracts (e-commerce, e-banking, e-business, e-contract).

Need

Signature is a special characteristic of any person. By the help of signature we can identify the person. In today day to day life as we talk about the verification of any person, we normally verify them by two ways firstly by face and secondly by signature. In banking or security system the person is normally verified by his or her signature. Hence we can say that the signature is alternate way to identify the person. In most of the organizations, the signature is normally verified by their experts by matching old signature's samples.

Comparative Analysis on Path Planning Algorithm's on Mobile Robot in Image Processing

Ruma kanta choudhury[1], Chandra kanta Samal[2]

[1] Computer science, Kalinga University, New Raipur, Chatisgarh, India.
[2] Computer Science, ANDC,Delhi University,New Delhi, India

Abstract:- *This paper presents an analysis on different path planning algorithms for mobile robot in static environment. It investigates three well known path panning algorithms and compared their performance on the basis of their working parameters and the computation time to find the solution. It also finds the shortest distance for the static environment and compared the computational distance from start to goal point at different levels for all the three algorithms. It has been tested at different shape of the image and computational time and length for all the three algorithms and verified. Image processing places an important role in the field of mobile robot navigation. There are different methods are used for navigation. In this paper, we reviewed around 23 papers are briefly described the amount of existence of the work for each motion planning approach. This paper includes a comparative study using C++ based approach on mobile robot with respect to image processing. Showing how the behavior and activity of the research paper has taken a change towards the navigation processes which controls navigation using NFT , A*and D*Lite algorithms. It has been seen that many times the researchers use image processing technique for obstacle avoidance or it use singles from gesture control or it takes the help of smart phone with sensor to find the obstacle to reach the destination. Finally some open areas and challenging topics are discussed. There are many different algorithms developed for the path planning by researchers in the field of robotics, water based resources, navigation and internet based games. The algorithms used in this field is A*, D* Lite and NFT (neighbour finding technique). Here we compared three algorithms and established a comparison path based approach to differentiate both the algorithms. We used a grid search technique using A* algorithm and quad tree approach using neighbour finding technique algorithm and also we used a DDA algorithm to optimize the NFT based path planning approach and compared.*

Keywords: *Path Planning, Algorithms, Grid search, Quad Tree, NFT (Neighbour finding technique), D*Lite, Digital Differential Analyzer (DDA).*

I. INTRODUCTION

The field shortest path planning is closely related to robotics where as the algorithms used here applied in different fields as per the requirement. Planning mobile robot is a challenging task for mobile robot navigation and also researchers provided different approaches for the shortest path planning strategies in the field of mobile robot games and many more applications. Each plan has its own advantage and disadvantage the basic goal is to reach the robot from source to destination. Here we used grid search and quad tree based path planning method for path planning with the help of A* algorithm[3,16] , Neighbour finding method[6,7] and D* Lite[8] to verify the difference in their approach .Here we have presented a real image presented in the form of square picture shape and represented at different part of the block as shown in the fig1 (a, b, c).The boundary is taken as (80,80) and (400,500).In this paper we planned for robots for different algorithms. First we represent the image as a square of different size then embedded these different size images in the (80,80) and (400,500) screen size. After the design is proposed all used algorithms introduced and applied on the image to find the shortest path. These all are it are simulated and the result is compared.

II. THE APPROCH

The quadtree initially come up with [4] , It is an approach where the complete tree is represented as a square and the square is divided in to four sub branches of equal size ad shown in fig 1(a) as row1 and coum1(R1C1) and row1colum2(R1C2) and also the tree form in a said form that each node has four different quadrants as shown in fig 1(b,c) While dividing the [6] image into four quadrants each node has four sons each node represented with(R1C1,R1C2,R2C1,R2C2).

IMPACT OF DDA OPTIMIZATION ON MOBILE ROBOT PATH PLANNING FOR MIXED IMAGE IN IMAGE PROCESSING

Rama Kanta Choudhury, Chandra Kanta Samal

ABSTRACT

Existing problem solving in the day to day environment requires computational intelligence. Path planning is one of the most important technologies in the navigation of the mobile robot, which should meet the optimization and real-time requests. The objective of the paper is to present a noble approach to find the efficient and effective path planning for mobile robot. Here first the image is located on the graph and then a quadtree is formed, according to the working space image with respect to the obstacle image. Then the NFT algorithm is used to obtain the shortest path from the start point to the goal point in the graph. Finally the DDA optimization algorithm is adopted to get the optimal path. Aiming at the shortcoming of the DDA algorithm which is easily plunging into the local minimum, DDA algorithm with NFT is put forward. The results of the simulation demonstrate the effectiveness of the proposed method, which can meet the real-time requests of the mobile robot's navigation. Here we have taken two different types of images, one square shape and other is mixed image of different shapes like triangle and circle. The working space is tested and result is verified using NFT Algorithm with DDA optimization.

ABSTRACT

Many difficult problems solving require computational intelligence. One of the major directions in artificial intelligence consists in the development of efficient computational intelligence algorithms, evolutionary algorithms, and neural networks. Some systems operate in isolation or cooperate with each other, some optimized techniques are used to resolve the mobile path planning, DDA is one of them. The behavior could emerge an intelligence called systems intelligence, and intelligence of a system. The shortest path planning approach and its optimization for the mobile robot in a static and dynamic environment are the major tasks in the field of Robotics. In the present day environment finding collision-free, the shortest path is the fundamental issue in the path planning. In the mobile robot, the processing time and reaching time is very important. The path time is to be reduced so that the complexity is reduced. During the process, it is found that few algorithms have its own advantages and disadvantages. Here we presented a DDA optimization technique for optimization.

Abstract

The shortest path planning approach and it's optimization for mobile robot in static and dynamic environment is the major task in the field of Robotics. In the present day environment finding collision free shortest path is the fundamental issue in the path planning. We have reviewed 100 papers on path finding technique in static and dynamic environment. Path planning in static environment is easy as compared to dynamic environment as in dynamic environment the obstacles are moving. Whereas optimizing the path is difficult in the static environment as well as in the dynamic environment. As per the timing is concerned, the path time is to be reduced so that the complexity is reduced. During the review process it is found that few algorithms have its own advantages and disadvantages as presented. Also a comparative study of different path planning techniques for static and dynamic environment is provided in this paper. The main focus in this review is to find the shortest path efficiently and effectively.

Keywords: *Path Planning, Algorithms, Grid search, Quad Tree, NFT (Neighbour finding technique), D*Lite*

1. Introduction

The survey is distributed into different sections as per our requirement. the main aim of this survey is to find the shortest path from source to destination with known and unknown environment in the presence of obstacles or when the obstacles come on the way. Mobile robots are authorized to move automatically from one point to other to reach their destination. They choose their own path to reach their destination without any hindrance with their preplanned path [1]. This paper provides a review of such papers based on their way to reach the target with the specified algorithms. Here we have reviewed many approaches and implemented. Efficient path planning approach is very important for mobile robot to follow the path. Here the main approach of the review is to find the different algorithms used and approached to find the shortest path from source to destination. Here the configuration of the robot is described by number of obstacles based on their position and sense of direction of the robot in the 2D and 3D environment [2]. A clear idea of planning and computing of collision free path is presented with given points with different algorithms. While reviewing papers we found that in mobile robot navigation, researchers used many algorithms out of which are A*, D* and D*Lite algorithm with grid search and quad tree methods [2][3][4][10][12][13]. ***The task of moving robots in mapped environments is a step by step approach; planning of the paths, optimal by certain criteria and controlling the robot to execute the planned paths. In this path planning, the task of finding a collision free path is to lead a robot from the initial configuration to the goal configuration among a set of obstacles. Generally, obstacles are modeled as polygons. The initial and the goal configurations are described by the***

Abstract

Wireless Ad hoc sensor nodes are playing an important role in wireless data transmission infrastructure in various environmental monitoring systems. Due to its compact size and energy efficient structure these nodes can be successfully deployed in wireless Ad hoc infrastructure. Recent developments wireless sensor technologies have provided the environmental management systems with capabilities of real time remote environmental monitoring system. We propose system architecture for wireless sensor networks and a database model for handling and storing sensor data stream in real time. The ZigBee wireless sensor networks is useful especially in monitoring or detecting possible natural disasters and reporting on it almost at real-time. A web based application developed to enable remote online access to wireless sensor network data with interactive data retrieval and visualization functionalities. The advantage of modular architecture is minimizing the software upgrade down time and enables hardware reusability.

Keywords:- ZigBee Network, Wireless Sensor Network, Disaster, Modular Architecture, Database Model.

1. Introduction

A Wireless sensor network (WSN) is a self configured and infrastructure less wireless networks. It consists of a number of sensors nodes (few tens to thousands) working together to monitor a region to obtain data about the environment. There are two types of WSNs: structured and unstructured. Unstructured WSN contains dense collection of sensor nodes and often deployed in ad-hoc manner in the field. In an ad-hoc deployment, sensor nodes can be dropped from a plane and randomly into the target area. In structured WSN on the other hand, all or some of the sensor nodes are deployed in a pre-determined locations. Structured network has fewer nodes and can be deployed with lower network maintenance and management costs.

A wireless sensor network (WSN) to monitor physical or environmental conditions such as temperature, sound, pressure, vibration, pollutants and to cooperatively pass their data through the network to a main location, where the data can be observed and analyzed . Wireless sensor networks have application of fields such as climate control, environmental monitoring, military surveillance, structural health monitoring, medical diagnostics, disaster management and emergency response [4]. The sensor nodes can communicate among themselves using radio signals and they have limited processing speed, storage capacity and communication bandwidth. The ZigBee Wireless Networks based on the IEEE Standard 802.15.4 as specifications, this wireless sensor networks (WSN) consists of light-weight, low power and small size sensor nodes (SNs). They have ability to monitor, calculate and communicate wirelessly. A set of applications require simple wireless connectivity, relaxed throughput, very low power, short distance and inexpensive hardware e.g. Industrial, Agricultural, Vehicular, Residential, Medical etc. Global climate change and atmospheric warming is increasing the occurrence of extreme climate phenomenon with increasing severity, both in context of human living as well as economic losses.

Abstract

The ZigBee technology is an IEEE 802.15.4 standard for data communications dealing with business and consumer devices. The ZigBee standard provides network, security and application support services operating on top of the IEEE 802.15.4 Medium Access Control (MAC) and Physical Layer wireless standard. ZigBee is a low-cost, low-power, wireless mesh networking standard. The low cost allows the technology to be widely deployed in wireless control and monitoring applications, the low power-usage allows longer life with smaller batteries, and the mesh networking which promises high reliability and larger range. In industry ZigBee is being used for next generation automated manufacturing, with small transmitters in every device on the floor, allowing for communication between devices to a central computer. This new level communication technology permits finely-tuned remote monitoring and manipulation.

Keywords:- *ZigBee, MAC, Wireless mesh networking, High reliability, Communication technology etc.*

I INTRODUCTION

The ZigBee technology is the wireless mesh networking standard created for connecting sensors, instrumentation and control systems. This is based on the IEEE 802.15.4 Standard and used in Wireless Personal Area Networks (WPANs) for high level communication. This technology is created by the ZigBee Alliance. Wireless sensor networks (WSN) consists of light-weight, low power and small size sensor nodes (SNs) [3]. They have ability to monitor, calculate and communicate wirelessly. The ZigBee Alliance organized as an independent, neutral and non profit corporation in 2002, it is open and global and any one can join and participate, membership is global. An organization with a mission to define reliable, cost effective, low-power, wirelessly networked, monitoring and control products based on an open global standard. Alliance provides interoperability, certification testing, and branding [15].

IEEE 802.15.4 is a standard which specifies the physical layer and media access control for low-rate wireless personal area networks (LR-WPANs). It is maintained by the IEEE 802.15 working group, which defined it in 2003 [3]. IEEE standard 802.15.4 as specifications for low-data-rate wireless connectivity with fixed, portable, and moving devices with no battery or very limited battery consumption requirements typically operating in the personal operating space (POS) of 10m [15]. It is foreseen that, depending on the application, a longer range at a lower data rate. The ZigBee wireless networks targets the application domain of low power, low duty cycle and low data rate requirement devices. Figure-1 below shows the example of a ZigBee networks. The ZigBee Networks, Coordinators are the most capable of the three node types. There is exactly one coordinator in each network and it is the device that establishes the network originally. It is able to store information about the network with including security keys. Routers act as intermediate nodes, relaying data from other devices.

Table-1: ZigBee 802.15.4 standard specifications

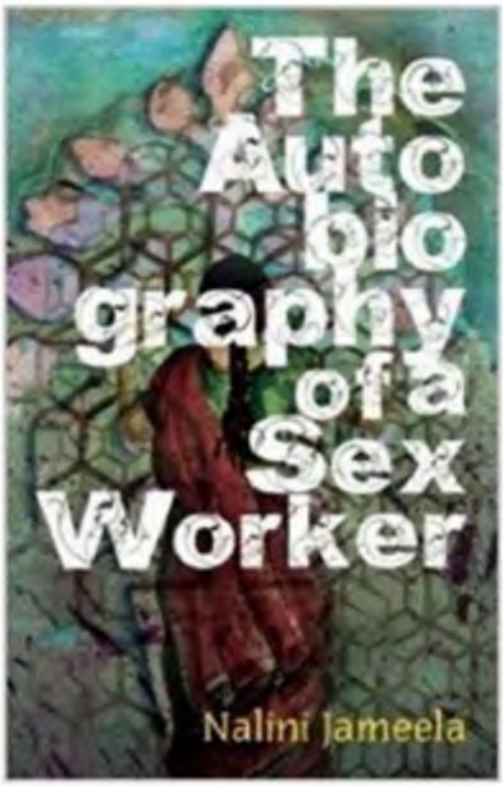
THE WHITE WOMAN'S GAZE

The nineteenth century was, perhaps, the greatest period of travel writing. Under Queen Victoria, Britain became the greatest power in the world with political and economic control over her colonies spread all over the globe, from Asia to Africa and the Caribbean Islands. Many British travellers and missionaries went to the colonies to take up what Kipling called the "White Man's Burden" – to "civilize" the "barbaric" races of Asia and Africa. Kipling urged them to take on the responsibility of ruling the Empire in his poems:

Take up the White Man's Burden –
Send forth the best ye breed –
Go, bind your son's in exile
To serve your captive's need:
To wait in heavy harness
On fluttered folk and wild –
Your new-caught, sullen peoples,
Half-devil and half-child.



- The White Man's Burden, 1899

These were Englishmen who saw the East "as an inferior, degenerate, erotic place which requires the guiding light of Western civilization" (Laishram 27). The East offered them a chance to escape boredom, failure and poverty in England. India and the East also offered an opportunity to secure wealth and adventure, prestige and identity. Ram Chandra Prasad, in his work on early English travellers to India, differentiates between the attitudes of the early travellers and the ones who came later: "The European travellers of the fifteenth and sixteenth centuries continued to approach India in a mood of child-like wonder, without the least sense of racial superiority. Until

Society and Sex Work in *The Autobiography of a Sex Worker* by Nalini Jameela

Manoj Kumar Garg, M.A., M.Phil.

Abstract

Sex workers are part of society but they are looked down upon as outcast in Indian society. They are exploited, insulted and humiliated. Even female sex workers are not taken as women rather taken as mere sex objects. Nalini Jameela portrays their plight through her biography *The Autobiography of a Sex Worker*. She herself has worked as a sex worker. She doesn't condemn the sex work rather takes it as a profession. This paper studies the problems faced by the sex workers, dual standards of society, and resilience of the sex workers.

Abstract

The significance and robustness of Free and Open Source Software (FOSS) are now well known at stages of development as well as deployment. It's natural to assume that the products of FOSS to be deployed as a preference over the commercially available propriety software. However, proprietary software not only exists but is also thriving. The present paper looks into the aspect of adoption of FOSS, with special emphasis to India. The two natural arena for adoption- Governance and Academia are chosen for study. The policy initiatives, frameworks and challenges in the implementation of FOSS in these two areas are discussed, while giving instances of its successful adoption. The study also discusses in brief the adoption of FOSS in business enterprise, where its adoption is dynamic and accelerated. Several challenges in adoption of FOSS over propriety software are also pointed out.

Keywords: Adoption, FOSS, Proprietary software

INTRODUCTION

The Free and Open Source Software (FOSS) movement attained prominence in the 1980s, primarily to unshackle the restrictions imposed on the use of copy righted software, now known as CSS (Closed Source Software). Today, although one may not be aware, FOSS is actually providing for the computational requirements for a large spectrum of products and services which make the modern, technologically intensive digital life possible. Most of the smart phones (android based), servers and portals, ATMs, supercomputers, databases etc around the world are FOSS driven. In India, two humongous citizen-specific projects – Aadhar's online infrastructure and the railway booking website utilizes the Linux servers. The FOSS provides a myriad of advantages over the CSS at all stages – development, distribution and research, which have been extensively mentioned in the literature [1-5]. Given the intrinsic freedom of usage, customization, propagation and the relative cost effectiveness which all products of FOSS offers, the adoption of FOSS by a country like India could have been a natural and prudent choice as the nation endevours to upscale the use of IT (information technologies) in its pursuit of digital governance. In this context, one may be betting on India becoming the global FOSS hub. It's evident to expect that the India is a fertile ground for the nurturing of a strong and mature FOSS ecosystem. A FOSS ecosystem comprises of a multitude of stakeholders – government, academic institutions like schools and colleges, FOSS solution providers and the FOSS community. Moreover, in India there is no dearth of business opportunities for providing IT solutions to enterprise. This is because India is only next to China in having the largest base of Internet users, notwithstanding the fact that 80 per cent of its population still needs to go online. When this is seen in the background of the availability in the last two decades of large number of reliable and robust FOSS products, which provides solutions for all domains, wherein the CSS have hitherto provided the services (Refer Table 1) the above expectation is certainly not misplaced.

So, where does India stand on the adoption of free software? The adoption of FOSS in India, until now can be described as patchy and sporadic, without a concerted push to adopt FOSS in the daily computational needs of various spheres viz., Governance, academia and business enterprise. However, it must be mentioned here that although the growth of FOSS in India has witnessed a faster rate than the past, the FOSS ecosystem is far from the threshold level of maturity. This has resulted into a narrow user base for FOSS in India. The government's efforts for FOSS adoption have been varied. While some efforts are subtle, voluntary and staggered, some migrations to FOSS have been hard and coercive. In most cases, migration to FOSS are justified from the perspectives of cost and security and its salient features of being participative, egalitarian and democratic is not emphasized sufficiently. While the goal of making India a global hub for FOSS is laudable, it becomes necessary to examine the extent of adoption and the associated challenges in the migration to FOSS for the computational needs of the digital society which we envisage in India. The present paper surveys the extent of adoption of FOSS in the three major areas of the Indian society i.e., Governance, academia and business enterprise. The study also attempts to identify the impediments in each of these spheres which are inhibiting the development of a supportive and mature ecosystem around FOSS which can harness FOSS to its full potential.

An analytical model and a numerical code are developed to study the evolution of multiple charge states of ions by irradiating clusters of atoms of a high atomic number (e.g., Xe) by $1.06\ \mu m$ and $0.53\ \mu m$ nanosecond laser pulses of an intensity in the range of $10^9 - 10^{12}\ W/cm^2$. The laser turns clusters into plasma nanoballs. Initially, the momentum randomizing collisions of electrons are with neutrals, but soon these are taken over by collisions with ions. The ionization of an ion to the next higher state of ionization is taken to be caused by an energetic free electron impact, and the rates of impact ionization are suitably modelled by having an inverse exponential dependence of ionizing collision frequency on the ratio of ionization potential to electron temperature. Cluster expansion led adiabatic cooling is a major limiting mechanism on electron temperature. In the intensity range considered, ionization states up to 7 are expected with nanosecond pulses. Another possible mechanism, filamentation of the laser, has also been considered to account for the observation of higher charged states. However, filamentation is seen to be insufficient to cause substantial local enhancement in the intensity to affect electron heating rates.

Abstract

The mathematical model for the propagation of intense laser pulse in a plasma having Gaussian profile is investigated. The model has been formulated considering that the relativistic–ponderomotive nonlinearity dominates over other nonlinearities in the plasma. Model equation for self-compression and self-focusing properties of the laser pulse has been set up and solved by both semi-analytical and numerical methods. The result indicates that due to the effect of group velocity dispersion, diffraction of the laser pulse and the nonlinearity of medium, the pulse width parameter as well as beam width parameter of pulse gets focused at a different normalized distance, and hence the normalized intensity is also deferred at those points. Numerical simulation shows an oscillatory behavior of intensity during propagation in the plasma either having minimum beam radius (r_0) or having minimum pulse duration (t_0) depending on the normalized distance.

ABSTRACT

The nano crystalline hexagonal strontium ferrite nanoparticles $SrFe_{12}O_{19}$ were synthesized successfully by chemical co-precipitation method. Thin films of strontium ferrite were prepared on glass substrate and characterized by various techniques such as XRD, SEM, TEM, EDS, UV-spectroscopy and FTIR. XRD pattern revealed the phase transformation of M-type hexa-ferrite with the minimum crystallite size of 18 nm. Uniform macroporous surface structure of the film was exposed by SEM images. Existence of iron, strontium and oxygen in the material was confirmed by EDX. Optical characterization of the material was done by UV-Spectroscopy and band gap was found as 3.2 eV. The liquefied petroleum gas (LPG) sensing behavior of strontium ferrite film was investigated at room temperature. The variations in electrical resistance of the film were measured with the exposure of LPG with respect to time as a function of concentration (0.5–5 vol.%) of LPG. The maximum value of sensitivity for these films was found 7 and maximum sensor response was 602.23.

1. Introduction

Surface to volume ratio and quantum confinement elucidate to nanostructure of materials. Ferrites are basically a class of materials which contains iron oxides having fascinating magnetic and electric properties [1]. These are prepared by sintering various transition metal oxides along with the alkaline earth metal oxide. Development of new class of ferrites, and studies on improvements in their properties began in early 90's. On the basis of technological application, magnets are distinguished as soft magnetic materials and hard magnetic materials [2]. Soft magnetic materials are those magnetic materials whose domains shift when magnetic field is applied and hard magnetic materials are those with less mobility of domain wall. Magnetized hard ferrites possess hexagonal structure with high value of magnetization and magnetocrystalline anisotropy so these are termed as M phase ferrites, with M as Ba, Sr or Pb [3,4]. $SrO\text{-}Fe_2O_3$ binary system has few ternary oxides including $SrFe_{12}O_{19}$, $SrFe_2O_4$, $Sr_2Fe_2O_5$ and $Sr_3Fe_2O_6$. Among these, $SrFe_{12}O_{19}$ has attracted the attention of most of the researchers due to its vast area of applications beside a stable characteristic-sand having high electrical resistivity. Strontium ferrite contains strontium and iron where strontium is S block element belonging to group 2 period 5 with $5s^2$ electronic configuration and iron belonging to d-block element group 8 period 4 with electronic configuration $3d^64s^2$ [5]. Crystal structure of M-phase ferrite is complex but can be described as hexagonal with unique axis. $SrFe_{12}O_{19}$ posses 64 ions per unit cell along with 11 different symmerty sites. Oxygen atoms are closely packed at interstitial position with Sr and Fe in ten layers along with the C-axis. The iron atoms are positioned at five different crystallographic sites 2a, 2b, 4f, 4k and 12k. Among them 12k, 4k, 2a are on octahedral site, 4f on tetrahedral site and 2b forming trigonal bipyramid surrounding by five oxygen atoms. Strontium ferrite is used for LPG sensing because of relatively high resistance and special magnetic resonance properties for adsorption. In strontium ferrite, there are large interstitial sites which interact with the oxygen molecules in comparison to other ferrites. The dielectric properties of strontium ferrite shed light on the charge carriers which are responsible for charge transport phenomenon. These ferrites can be prepared by different methods viz. as chemical co-precipitation, sol-gel, ball milling, solid state reaction and reverse micelle process [6–10].

Kanagesan et al. prepared the strontium ferrite nano powder by sol-gel method and carried out investigation on the crystalline $SrFe_{12}O_{19}$ powder using XRD. The average particle size was found to be 80–100 nm and its thermal analysis revealed its endothermic and exothermic reaction peaks [11]. T.T.V. Nga et al. investigated

Abstract

In the present work nanostructured ferric oxide has been synthesized using sol–gel method. Thin films of ferric oxide were fabricated via spin coating process. The surface of the thin film was scanned by scanning electron microscope that exhibited the surface morphology of ferric oxide nanostructures. The material was also characterized by XRD, Acoustic particle sizer and FTIR. All the particles distributed on the surface have some spaces among them known as pores. These pores serve as adsorption sites for moisture and other gases. EDX confirmed the elements forming the ferric oxide in pure form. The particle size of the ferric oxide was estimated as ~12.2 nm. The pore size of the film was ~50 nm i.e., nature is mesoporous. Annealing effect on the surface morphology was also observed. Humidity sensing, electrical as well as optical of the prepared film was carried out. The results showed the suitability of material for the development of humidity sensors. Variations in resistance with the exposure of LPG were recorded and found that resistance of film increases with the increasing exposure time and concentration of gas. The maximum sensing response of the sensor was recorded as 3.26 for 1000 ppm at room temperature. The response and recovery times of the sensor were found to be ~12 and 9 min, respectively.

ABSTRACT

The iron oxide-polyaniline (α-Fe_2O_3–PANI) films were prepared by spin coating method on various corning glass substrates over Pt inter-digital electrodes (IDEs). The prepared film was characterised using XRD, SEM, AFM, UV-vis and FTIR. Also, it was employed for NO_2 sensing. The nanostructured α-Fe_2O_3–PANI film showed a high sensing response ~2.29×10^2 towards 20 ppm of NO_2 gas. Besides giving the higher sensing response towards NO_2 gas, α-Fe_2O_3–PANI sensor structure was found to be highly selective and exhibited the poor gas sensing response towards other interfering gases including e.g. Acetone, IPA, NH_3, LPG and CO_2. The investigated sensor can be used for the detection of NO_2 at the industrial level.

1. Introduction

Among the nanosized metal oxides that have been the focus of research due to their potential application in electronic devices, maghemite (<alpha>-Fe_2O_3) has attained prominence due to its magnetic, photocatalytic and electrochemical properties [1–4]. The electrical resistance of semiconductor oxides, such as SnO_2, ZnO, TiO_2 and Fe_2O_3, has a strong dependence on the concentration of surrounding gases. Therefore, oxides are commercially designed as chemical sensors to detect the toxic gases [5–10]. With this intention, several methods of preparation of ferric oxides such as co-precipitation, microemulsion, pulsed wire discharge and hydrothermal processes are employed in order to obtain nanostructured powder [11–13]. The sol-gel process has a unique advantage of producing large-surface-area films at low cost, which is useful to enhance the gas sensitivity [14].

Polyaniline (PANI) as a typical conducting polymer has received a great deal of attention recently [15,16]. With regard to the background, using a composite carrier composed of PANI and ferric oxide nanoparticles could combine the excellent properties of ferric oxide and polyaniline, in addition, a synergistic effect might play a role in enhancing the properties of nanocomposite catalysts. They have unique electronic properties due to the π-conjugation present in their backbones and display improved characteristics over conventional sensors based on nanometal oxides. As NO_2 is a toxic and dangerous gas even at very low concentration (≥20 ppm), therefore, there is an urgent need for a reliable and robust gas sensor for the detection of NO_2 [17].

In the present investigation, PANI/α-Fe_2O_3 nanocomposite thin film has been prepared on the corning glass substrate via chemical polymerization method and tested for the electrical response of the thin film to NO_2 gas at room temperature.

2. Experimental

2.1. Synthesis of nanostructures

In this experiment, 0.1 M of iron nitrate ($Fe(NO_3)_3 \cdot 9H_2O$, Aldrich 98% purity) was used as a precursor solution, 0.1 M of monohydrate citric acid solution as legend molecules and 150 ml distilled water as the solvent. The prepared ferric nitrate solution was added to the citric acid solution dropwise with vigorous stirring. The obtained solution was then heated to a temperature from 70 °C to 120 °C, with vigorous stirring until the gel was formed. Such prepared precursor was used to fabricate the thin films on various corning glass substrates over Pt-IDE using spin coating process [18].

For the formation of the powder, the gel was precipitated by adding NH_4OH dropwise. The powder was then dried at 80 °C for 4 h and the crushed powder was annealed at 500 °C for 2 h Fig. 1(a) shows the flow chart of the growth of PANI [19].

Abstract Present work reports the utility of PANI doped titanium dioxide thin film prepared by spin coating technique as LPG sensing. Optical properties were studied using UV–Vis absorption spectroscopy and FTIR spectroscopy. The surface morphology and structure of synthesized material were characterized by SEM and XRD analysis, respectively. The structural analysis confirmed the formation of TiO_2–PANI having an average crystallite size 21 nm. Variations in the resistance with exposure of LPG to the sensing element were observed. Sensor response (S) as a function of time was calculated and its maximum value was found as 2.37 towards 2000 ppm of LPG, response time of the sensor was 2 min. The sensor was quite sensitive to LPG and results were found reproducible.

1 Introduction

Liquefied petroleum gas (LPG) contains the hydrocarbons, majority propane, and butane. The lower explosive limit (LEL) as specified by National Institute for Occupational Safety and Health (NIOSH) and Occupational Safety and Health Administration (OSHA) standards for chemical hazards is average 20,000 ppm by volume 2.0% in air. The permissible exposure limit (PEL) for LPG as specified by NIOSH and OSHA standards is 1000 ppm [1]. The various kinds of materials are used for the detection of reducing LPG gas [2]. Among them, semiconducting metal oxides such as titania (TiO_2) [3], tin dioxide [4], copper ferrite [5] and zinc oxide [6] have been studied extensively. TiO_2 as an n-type semiconducting metal oxide with two distinct phases; anatase and rutile, has been used for a broad range of LPG gas sensing [3, 4]. PANI has been prepared by oxidation of the aniline or anilinium salts e.g. aniline hydrochloride or aniline sulphate, in aqueous acidic ambient [7]. It is a p-type semiconducting material [8] and has specific redox nature, controllable conductivity, and considerable thermal stability [9, 10].

In this work, for the first time, TiO_2–PANI nanocomposite thin film was prepared on a corning glass substrate and employed as LPG sensor.

2 Experimental

Titanium tetrachloride ($TiCl_4$), propanol, deionized water (DI), ethanol, aniline, HCl, ammonium persulphate (APS) and ammonium hydroxide used for the sensor preparation were purchased from Sigma Aldrich Chemical Co. with 99.99% purity. 500 ml distilled water was dissolved with 50 ml HCl followed by 8.33 ml Aniline. After vigorous stirring in ice bath, it was indexed as part (I). 18.924 gm APS was mixed in 331 ml distilled water and after vigorous stirring the solution was indexed as part (II). Now Part I was added with part II followed by vigorous stirring for 2 h. A colour less filtrate was obtained. After drying it at 40–50 °C for 4–5 h, emeraldine salt of PANI was prepared. Later it was washed with NaOH and filtered. Filtrate was

Abstract

The iron oxide-polyaniline (α-Fe_2O_3–PANI) films were prepared by spin coating method on various corning glass substrates over Pt inter-digital electrodes (IDEs). The prepared film was characterised using XRD, SEM, AFM, UV-vis and FTIR. Also, it was employed for NO_2 sensing. The nanostructured α-Fe_2O_3–PANI film showed a high sensing response ~2.29×10^2 towards 20 ppm of NO_2 gas. Besides giving the higher sensing response towards NO_2 gas, α-Fe_2O_3–PANI sensor structure was found to be highly selective and exhibited the poor gas sensing response towards other interfering gases including *e.g.* Acetone, IPA, NH_3, LPG and CO_2. The investigated sensor can be used for the detection of NO_2 at the industrial level.

Abstract

The study proposes a semi-analytical model for the pulse compression of two co-propagating intense laser beams having Gaussian intensity profile in the temporal domain. The high power laser beams create the relativistic nonlinearity during propagation in plasma, which leads to the modification of the refractive index profile. The co-propagating laser beams get self- compressed by virtue of group velocity dispersion and induced nonlinearity. The induced nonlinearity in the plasma broadens the frequency spectrum of the pulse via self-phase modulation, turn to shorter the pulse duration and enhancement of laser beam intensity. The nonlinear Schrodinger equations were set up for co-propagating laser beams in plasmas and have been solved in Matlab by considering paraxial approximation. The propagation characteristics of both laser beams inside plasma are divided into three regions through the critical divider curve, which has been plotted between pulse width τ_{01} and laser beam power P_{01}. Based on the preferred value of critical parameters, these regions are oscillatory compression, oscillatory broadening, and steady broadening. In findings, it is observed that the compression of the laser beam depends on the combined intensity of both beams, plasma density, and initial pulse width.

Highlights

- Collective dynamics of coupled chemo-mechanical oscillators are studied experimentally.
- Two different coupling scenarios are entertained.
- For both the coupling scenarios, the collective dynamics exhibit partially synchronized states.

Abstract

Partially synchronized (clustered) states are defined as coexisting coherent (synchronized) and incoherent (unsynchronized) domains in an ensemble of interacting oscillators. We report these clustered states in experiments involving an ensemble of sixteen mercury beating heart (MBH) oscillators. These oscillators interact via resistors and are subjected to two different network schemes: 1) All to all and 2) Nonlocal. For the all to all network, the coupling strengths were inhomogeneously distributed, whereas for the nonlocal network scenario, each oscillator was coupled, with an identical coupling strength, with four of its nearest neighbors in either direction. For both of these network schemes, partially synchronized states results into grouping of these oscillators, wherein some oscillators are synchronized and rest are unsynchronized. For all to all

Abstract

Objective: *Aedes aegypti* (L.) is a well-known widely spread disease vector transmitting several diseases of concern. Current investigations were undertaken to discover the larvicidal and repellent potential of essential oil from the basil plant, *Ocimum basilicum* leaves against *Ae. aegypti* as a suitable and eco-safe alternate to chemical insecticides.

Abstract

PSEUDOMONAS AERUGINOSA: ISOLATION, CHARACTERIZATION AND EVALUATION OF LARVICIDAL EFFICACY AGAINST AEDES AEGYPTI L.

Rajiv Kumar Shukla, Dr. Sarita Kumar* and Pushplata Tripathi

ABSTRACT

The present study investigates the bioactivity of Pseudomonas aeruginosa against the fourth instar larvae of Aedes aegypti. The bacterium was isolated from the soil samples collected from various parts of Delhi and characterized based on their biochemical and morphological characters. The identification of bacterium was carried out with the help of MALDI-TOF MS Biotyper which confirmed the bacterium as Pseudomonas aeruginosa. The mosquitocidal potential of the isolated bacteria was evaluated against early fourth instars of dengue vector, Aedes aegypti maintained in the laboratory under controlled conditions of 28 ± 1 °C and 80 ± 5 % RH with a photoperiod of 14h daylight/10h darkness. The bioassay was performed in accordance with the protocol described by World Health Organization which proved the significant larvicidal efficacy of Pseudomonas aeruginosa against early fourth instars of Ae. aegypti. The larval exposure to bacterial formulation for 24 h resulted in the respective LC50 and LC90 values of 5.58 and 12.80 mg/mL. The present study concludes that non-pathogenic bacteria present in the natural environment can be used as potential bio-control agents against the larvae of Aedes aegypti. Further studies are needed to identify the bioactive extracellular and intracellular metabolites of bacteria effective against dengue vector larvae.

ABSTRACT

In order to exploit and improve the metabolic versatility of micro-organisms, the classical area of research has been to optimize the production of extra cellular enzymes for efficient degradation of substrates and selection of advanced and more active enzymes for enhanced enzyme yield. Microbial xylanases are important group of industrial enzymes that are used for various commercial purposes. Wide variety of bacteria in the environment permits screening for efficient xylanase producing strains to help overcome the current challenges. In an attempt to discover new xylanase producing strains, more than 600 actinomycete isolates representing varied ecological habitats were screened. By using birchwood xylan as substrate, diameter of zones of hydrolysis was measured and it ranged from 17-40 mm. Among the isolates tested, colonies 169, 126, and 202 along with the positive controls NRRL B-24314 (Streptomyces thermocoprophilus) and NRRL B-24916 (Streptomyces mexicanus) showing appreciable zones of clearance were selected for quantitative screening under the submerged state fermentation. Enzyme from respective colonies was partially purified by ammonium sulfate precipitation and dialysis. Enzyme activity ranged from 6.72- 15.0 IU/ml (in crude) and 11.15-25 IU/ml (in partially purified). The highest enzyme producer, colony 169 was further purified to homogeneity by ion exchange chromatography. Activity estimated in purified fraction was 32.12 IU/ml. Colony 169 showed maximum xylanase activity

Purification and molecular characterization of chitinases from soil actinomycetes

Payal Das, Prateek Kumar, Munendra Kumar, Renu Solanki and Monisha Khanna Kapur*

Acharya Narendra Dev College, University of Delhi, Govindpuri, Kalkaji, New Delhi-110 019, India.

Received 2 June, 2017; Accepted 4 July, 2017

Microbial extracellular chitinases are used in agriculture as effective biocontrol agents and in waste degradation, pharmaceutical and food industry. Actinomycetes are widely tapped group for production of extracellular chitinases. In the present study, approximately 260 actinomycetes were isolated from various ecological habitats was subjected to primary analyses and screened for production of chitinase by plate assay method. Diameter of zones of hydrolysis ranged from 8 to 16 mm. Based on the results, isolates 130, 194, 184, NRRLB 24916 (*Streptomyces mexicanus*) and NRRLB 16746 (*Streptomyces albidoflavus*, positive control) were selected for secondary screening and purification. Enzyme activity was estimated in crude cell free extract and partially purified samples. Activity ranged from 7.16 to 14.12 IU/ml (in crude extracts) and 12.1 to 23.10 IU/ml (in partially purified samples). In case of highest chitinase producing isolate 130, effect of various fermentation conditions (pH, temperature and substrate concentration) was studied in crude extract. Furthermore, complete purification of isolate 130 was done by column chromatography and the activity in purified fraction was found to be 32.12 IU/ml. The K_m and V_{max} values of the purified fractions for isolate 130 were 2.11 µg/ml/min and 53.11mg/ml respectively. This shows that the enzyme has high affinity for the substrate. SDS gel electrophoresis of the purified fraction showed presence of single band of approximately 65 to 70 kDa. Analyses of purified chitinase were done using MS/MS technique. N-terminal sequence corresponded to chitinase, the gene encodes a protein of 453 amino acid residues. Comparison of deduced amino acid sequence to other chitinases in the database indicated that enzyme showed 70% similarity with chitinase from *Streptomyces plicatus* and belongs to glycoside hydrolase family 18. Homology modeling showed that the enzyme was folded into a domain of $(\alpha/\beta)_8$ barrel structure. Identification of secondary structure was done by CD spectroscopy. Isolate 130 was capable of degrading biodegradable wastes such as crustacean shells.

Key words: Actinomycetes, extracellular chitinase, primary screening, secondary screening, purification, MS/MS analyses, homology modelling, protein structure, biodegradation.

INTRODUCTION

Chitinases are enzymes that hydrolyse the β-1,4 linkage of N-acetyl glucosamine present in chitin chains. Due to vast availability, low cost, high stability and productivity, microbial chitinase is attaining prominence for waste management, pest control in agriculture, and human health care (Das et al., 2015, 2016; Rathore and Gupta, 2015). Improving the yield of the enzyme and consequent cost reduction depends on the selection of strains, optimization of fermentation conditions, genetic improvement of strains and kinetic studies of enzyme (Andualem,

ABSTRACT

The biosynthesis of UDP-*N*-acetylmuramic acid (UDP-MurNAc) by reduction of UDP-*N*-acetylglucosamine-enolpyruvate (UDP-GlcNAc-EP) in an NADPH and FAD-dependent reaction in bacteria is one of the key steps in peptidoglycan biosynthesis catalyzed by UDP-*N*-acetylglucosamine-enolpyruvate reductase (MurB). Here, we present the crystal structure of *Mycobacterium tuberculosis* MurB (MtbMurB) with FAD as the prosthetic group at 2.0 Å resolution. There are six molecules in asymmetric unit in the form of dimers. Each protomer can be subdivided into three domains and the prosthetic group, FAD is bound in the active site between domain I and domain II. Comparison of MtbMurB structure with the structures of the *Escherichia coli* MurB (in complex with UDP-GlcNAc-EP) and *Pseudomonas aeruginosa* MurB (in complex with NADPH) showed all three structures share similar domain architecture and residues in the active site. The nicotinamide and the enol pyruvyl moieties are well aligned upon superimposition, both positioned in suitable position for hydride transfer to and from FAD. The comparison studies and MD simulations demonstrate that the two lobes of domain-III become more flexible. The substrates (NADPH and UDP-GlcNAc-EP) binding responsible for open conformation of MurB, suggesting that NADPH and UDP-GlcNAc-EP interactions are conformationally stable. Our findings provide a detail mechanism about the closed to open state by binding of NADPH and UDP-GlcNAc-EP induces the conformational changes of MurB structure that may trigger the MurB catalytic reaction.

1. Introduction

The growth of multidrug-resistant *Mycobacterium tuberculosis* (Mtb) has become an increasing global problem due to acquired resistance to the first and second line drugs [1]. To address the issues of multidrug resistance, discovering drugs with novel modes of action, targeting enzymes deemed specific and essential for the cell wall biogenesis in Mtb recommends a valid approach. Peptidoglycan represents vital constituent of the cell wall in most prokaryotic organisms which provides osmotic stability and defines the size and shape of bacterial cells [2]. Efforts have been made in recent years to study the importance of these enzymes in the peptidoglycan biosynthetic pathway with the hope that novel enzyme inhibitors might be found for these essential targets [3–5].

The cytoplasmic biosynthetic pathway leading to formation of peptidoglycan units involves six enzymes [6,7]. First, UDP-GlcNAc enolpyruvyl transferase, MurA catalyzes the formation of UDP-GlcNAc enolpyruvate by transferring enolpyruvate (UDP-GlcNAc-EP) from phosphoenolpyruvate followed by UDP-GlcNAc enolpyruvate reductase (EC:1.3.1.98, MurB) reaction which catalyzes the reduction of UDP-GlcNAc-EP to form UDP-*N*-acetylmuramic acid (UDP-MurNAc). Then a series of Mur ligases (MurC-F) catalyze the sequential addition L-Alanine, D-Glutamic acid, meso-diaminopimelic and the dipeptide D-Alanine-D-Alanine to UDP-MurNAc, to form the final UDP-MurNAc-pentapeptide. MurB enzyme is essential for the viability of bacterial cells [7] and the absence of a homologue in eukaryotic cells makes MurB

Abstract

Bacteriophages are being considered as a promising natural resource for the development of alternative strategies against mycobacterial diseases, especially in the context of the wide-spread occurrence of drug resistance among the clinical isolates of *Mycobacterium tuberculosis*. However, there is not much information documented on mycobacteriophages from India. Here, we report the isolation of 17 mycobacteriophages using *Mycobacterium smegmatis* as the bacterial host, where 9 phages also lyse *M. tuberculosis* H37Rv. We present detailed analysis of one of these mycobacteriophages — PDRPv. Transmission electron microscopy and polymerase chain reaction analysis (of a conserved region within the TMP gene) show PDRPv to belong to the *Siphoviridae* family and B1 subcluster, respectively. The genome (69 110 bp) of PDRPv is circularly permuted double-stranded DNA with ~66% GC content and has 106 open reading frames (ORFs). On the basis of sequence similarity and conserved domains, we have assigned function to 28 ORFs and have broadly categorized them into 6 groups that are related to replication and genome maintenance, DNA packaging, virion release, structural proteins, lysogeny-related genes and endolysins. The present study reports the occurrence of novel antimycobacterial phages in India and highlights their potential to contribute to our understanding of these phages and their gene products as potential antimicrobial agents.

Abstract

Background: Microwave irradiation has emerged as a useful synthetic strategy for chemists and drug developers due to enhanced yields, regioselectivity, and faster reaction times. One area of importance in its practice has been the design of spiro compounds, which possess great interest on account of their natural occurrence and medicinal capabilities. The increasingly large number of these scaffolds and unlimited amount of methodologies utilized in their preparation have made them good candidates for the microwave assisted approach.

Conclusion: Therefore, this review emphasizes the use of microwave irradiation in the synthesis of spiro heterocyclic compounds.

Keywords: Spiro compounds, heterocycles, microwave, green synthesis.

An analysis of replenishment model of deteriorating items with ramp-type demand and trade credit under the learning effect

Archana Sharma, Usha Sharma and Chaman Singh

Published Online: May 13, 2018 · pp 313-342 · https://doi.org/10.1504/IJPM.2018.091668

Abstract

Effective management and control strategies are prerequisites in order to optimise inventory related decisions. Robust replenishment model can reduce overall inventory cost and increase financial surplus for the organisation. Adoption of trade credit strategy for deteriorating items provides economic benefits to the retailer (buyer) in settling the account for the fixed period and boosts the sales of the organisation. Therefore, in this proposed model trade credit is introduced and demands pattern follows ramp-type which is quadratic function of time for decaying items. Shortages are allowed and partially backlogged where the backlogging rate is dependent of waiting time. The inflation factor is also considered to propose realistic environment. Additionally, this study also considered the cost components which are followed by learning curve to improve the total inventory cost with strategic scheduling. Finally, the model is analysed through numerical examples and the sensitivity analysis is performed to test the robustness of the model.

Abstract

Helicoverpa armigera, a global polyphagous pest, attacks a wide variety of crops causing huge agricultural loss. Overuse of conventional insecticides for *Helicoverpa* control has made *Helicoverpa* resistant to insecticides leading to more severe attacks on crops diverting interest of researchers to explore alternate control agents. Present study investigates the cidal and antifeedant potential of Emamectin benzoate; a semi-synthetic avermectin derived from the soil actinomycetes, *Streptomyces avermitilis;* against early IV instars of *H. armigera*. Larvae were fed on the castor leaf discs (3.5 cm diameter) dipped in different concentrations of Emamectin benzoate; ranging from 0.05 µg/mL-1.5 µg/mL. The leaf disc areas were measured pre-and post-larval feeding to estimate the antifeedant potential of compound. The effect of feeding was also assessed on the survival of larvae by scoring the larval mortality till 96 h. Our investigations showed significant larvicidal potential of Emamectin benzoate against *H. armigera* revealing respective LC_{50} values of 0.26 µg/mL, 0.095 µg/mL, 0.043 µg/mL and 0.027 µg/mL after 24, 48, 72 and 96 h feeding. Furthermore, a remarkable decrease of 93.59% was observed in larval feeding potential indicating significant antifeedant efficacy of Emamectin benzoate. A strong correlation between antifeedant index and the Emamectin benzoate concentration resulted in 1.48-fold index reduction with a decrease in concentration. Our results demonstrated efficacy of Emamectin benzoate as an effectual larvicidal and antifeedant agent against *H. armigera*. Employing selective insecticide can tackle issues of pest resistance and pest resurgence after ascertaining in the fields as *Helicoverpa* control agent and negating impact on non-target organisms.

Abstract

Temperature plays significant role in the oxidation of ammonia in filtration units of recirculating aquaculture system. The impact of temperature on the abundance of ammonia oxidizing archaea and bacteria, and the expression of ammonia oxidizing gene (amoA) at specific temperature was evaluated. The broken earthen pot pieces used as filter bed materials of recirculating system, showing the presence of microorganisms were introduced in glass containers (5 pieces/5l) filled with synthetic wastewater and exposed to four different temperatures of 10, 20, 30 and 40°C for 40 days. The ammonia oxidation rate was minimum at 10°C. In 20, 30 and 40°C treatments, 99% ammonia was reduced on day-18, 8 and 18, respectively compared to the initial day. Fresh ammonium chloride (2 mM) was added twice to maintain the ammonia concentration in all treatments, except 10°C one. Nitrite-N level was < 1 mg/l at 10°C. The level was highest on day-22 at 20° and 40°C and on day-12 at 30°C. The nitrification was 10 days delayed at 20°C and 40°C compared to 30°C treatment. Concentration of nitrate-N was lowest at 10°C. Highest concentration of nitrate-N was observed on day-40 at 20°C and 40°C and day-26 at 30°C. Highest copy number of bacterial amoA was recorded at 30°C (2.59×107) followed by 20°C (4.08×106), 40°C (1.45×106) and 10°C (5.664×103). Archaeal amoA was highest at 30°C (7.47×103) followed by 40°C (2.98×102) and 20°C (46.8) treatments. Hence it may be concluded that 30°C temperature was optimum for the efficient and faster oxidation of ammonia in the present recirculating system.

Floral contrivances and specialised pollination mechanism strongly influence mixed mating in *Wrightia tomentosa* (Apocynaceae)

C. Barman, V. K. Singh, S. Das, R. Tandon

Abstract

- Reproductive success of a plant species is largely influenced by the outcome of mating pattern in a population. It is believed that a significantly larger proportion of animal-pollinated plants have evolved a mixed-mating strategy, the extent of which may vary among species. It is thus pertinent to investigate the key contributors to mating success, especially to identify the reproductive constraints in depauperate populations of threatened plant species.
- We examined the contribution of floral architecture, pollination mechanism and breeding system on the extent of outcrossing rate in a near-threatened tree species, *Wrightia tomentosa*. The breeding system was ascertained from controlled pollination experiments. In order to determine outcrossing rate, 60 open-pollinated progeny were analysed using an AFLP markers.
- Although the trees are self-compatible, herkogamy and compartmentalisation of pollen and nectar in different chambers of the floral tube effectively prevent spontaneous autogamy. Pollination is achieved through specialised interaction with moths. Differential foraging behaviour of settling moths and hawkmoths leads to different proportions of geitonogamous and xenogamous pollen on the stigma. However, most open-pollinated progeny were the result of xenogamy (outcrossing rate, tm = 0.68).
- The study shows that floral contrivances and pollination system have a strong influence on mating pattern. The differential foraging behaviour of the pollinators causes deposition of a mixture of self- and cross-pollen to produce a mixed brood. Inbreeding depression and geitonogamy appear to play a significant role in sustaining mixed mating in this species.

Abstract

Reproductive success of a plant species can be affected by the distribution pattern of its conspecifics in a small population. Besides the low mate availability, the dynamics of breeding system and pollination mechanism may also contribute to low fruit-set in such populations. We examined the relative contribution of these reproductive attributes on fruit-set across the contrasting distribution pattern (denser vs. sparser plots) in two isolated natural populations of a near-threatened tree species, *Anogeissus sericea* var. *nummularia*. Although flowers in the species are of generalist type, the narrow stigmatic surface appears to impose a requirement for a specialist pollinator. Pollination in the tree species is mediated only by the flies. The trees exhibit partial selfing and suffer from strong inbreeding depression at the early life-history stages of the selfed progeny. We recorded significant difference between the denser and sparser plots in terms of inflorescence visits per tree, and the number of trees covered in a bout by the pollinators. Moreover, tree density showed a strong positive correlation with fruit-set. Besides the requirement of having proximity among the conspecifics to facilitate pollinator movement, pollen quality also seemed to be a crucial attribute in the reproductive success of the tree species. It is inferred that the mating pattern and fecundity of plants in small and isolated populations are significantly influenced by the extent of sexual incompatibility and magnitude of their dependence on pollinators.

Received September 18, 2017

Three mononuclear metal complexes [(curcu)M(bpy)]Cl **1-3** of nickel^{II} **(1)**, copper^{II} **(2)** and zinc^{II} **(3)** derived from curcumin (curcu) and 2,2'-bipyridine (bpy) have been isolated and characterized by analytical and spectral methods, *viz.* elemental analyses, molar conductance, magnetic susceptibility measurements, mass spectrometry, IR, UV-visible spectrometry and molecular modeling studies. IR spectral frequencies exhibited curcumin and 2,2'-bipyridine both behave as bidentate ligand and coordinate to metal ion through the carbonyl oxygen and nitrogen atoms respectively. All the complexes showed molar conductance corresponding to 1:1 electrolytic nature. Ni^{II} and Cu^{II} complexes were confirmed possessing square planar geometry however Zn^{II}, tetrahedral. Metal complexes along with curcumin and 2,2'-bipyridine were examined against the opportunistic pathogens. The results obtained indicate that metal complexes have reasonable antimicrobial potential.

INTRODUCTION

Naturally occurring phenolic pigment, Curcumin; chemically, [1,7-bis(4-hydroxyl-3-methoxyphenyl)-1,6-heptadiene-3,5-dione] is a major component of the Curcuma species. It is obtained from the rhizome of *Curcuma longa* Linn.,[1] which is commonly used as a yellow coloring and flavoring agent in foods. Recent studies have shown that curcumin possesses a specific property of binding to metals and as a multipotent agent for combating to potent biological as well as pharmacological activities.[2-8] Thus, for the past decade curcumin as a ligand has been the subject of great interest in modern coordination chemistry.[9-12] Curcumin has a specific chemical motif, a bis-α,β-unsaturated-β-diketone which exhibits keto-enol tautomerism (**Figure 1**). The virtue of coordination property of curcumin leads to tailoring a rational drug design including a number of metal complexes and scavenge the active free-radicals which makes it a more potent bioactive agent *viz.* as antimicrobial agent, anticarcinogenic, antialzheimer, used in catalysis, radiodiagnostic and several other applications.[13-17] Research analysis postulates that the biological properties of curcumin are significantly enhanced upon coordination with metal ion.[18-19] On the other hand, heterocyclic compounds such as pyridine, phenanthroline, bipyridine, and their respective derivatives etc. have been shown extended biological activities when coordinated with metal ion.[20-21] Various enzymes, vitamins, proteins and other life regulating biomoleeules, most of which consist of N- and/or O- containing heteroatoms which are the key of chelation with transition metal ions.

Thus, specific biological and pharmacological role of curcumin, bypiridine and various role of transition metal ions in daily life, could have made

Abstract

A rationally designed chemosensor L1 (2-(2-amino-4,5-dihydrothiazol-4-yl)-5,5-dimethylcyclohexane-1,3-dione) is capable for the detection of biologically important Cu^{2+} and Fe^{3+} ions. The observable change in absorbance and emission in HEPES buffer solution and binding parameters display notable sensing ability of Cu^{2+} and Fe^{3+} ions. From Job's plot and ESI-MS spectra, 1:1 stoichiometric complexation with Cu^{2+} and Fe^{3+} ions have been established. The chemosensor was also utilized to develop logic gate by reversibility cycles for Fe^{3+} ion by EDTA. In addition, complex formation between the receptor and Cu^{2+}/Fe^{3+} ion was investigated by spectroscopically and computational studies. The cell imaging study indicated that L1 is highly efficient for the detection of Fe^{3+} ion in live cells. The simple synthetic route, multi-stimuli response, regenerative action and solution visualization of the proposed chemosensor potentially make it as excellent sensor for real samples.

Abstract

Aporosa octandra (Buch.-Ham. ex D.Don) Vickery is a native species of India. Different parts of the plant are used for the medicinal purpose by the tribal peoples of south-eastern part of India. However, the biological properties of *A. octandra* have not been studied well. The extracts obtained from the bark of *A. octandra* were evaluated to determine their protective effect on cognitive impairment and oxidative stress in mice induced by D-galactose using the standard protocol. Different dosages of extract **AOE-4** (100, 200, and 300 mg/kg, p.o.) were administered to mice, which were previously treated for six weeks with D-galactose (100 mg/kg s.c.). The D-galactose-induced mice showed significantly impaired cognitive behavior, i.e., oxidative defense, compared to the sham group. Six weeks of treatment with *A. octandra* extract **AOE-4** (100, 200 and 300 mg/kg, p.o.) considerably improved the cognitive behavior and oxidative impairment of mice compared to the control alone (D-galactose). For the phytochemical investigation, the bark of *A. octandra* was successively extracted with dichloromethane and methanol. The chemical constituents of *A. octandra* were isolated by multiple column chromatography and characterized by different spectral analyses. (*R*)-Coclaurine (**AO-5**), an alkaloid, was isolated along with two other compounds from the **AOE-4** extract; three more compounds were also isolated from the **AOE-1** extract of the bark of *A. octandra*. All the compounds were isolated for the first time from the bark of *A. octandra*, and their structures were established by detailed spectral studies. The structure of compound **AO-5** was also investigated and confirmed by X-ray diffraction and DFT studies. This study highlights the protective effect of *A. octandra* bark extract against D-galactose-induced biochemically dysfunction in mice. (*R*)-Coclaurine (**AO-5**) was isolated as one of the major components of *A. octandra* bark from **AOE-4** extract; [redacted] compound could be further evaluated for the development of new potential [redacted]

Social centrality using network hierarchy and community structure

Rakhi Saxena, Sharanjit Kaur & Vasudha Bhatnagar

Data Mining and Knowledge Discovery **32**, 1421–1443 (2018) | Cite this article

Abstract

Several centrality measures have been formulated to quantify the notion of 'importance' of actors in social networks. Current measures scrutinize either local or global connectivity of the nodes and have been found to be inadequate for social networks. Ignoring hierarchy and community structure, which are inherent in all human social networks, is the primary cause of this inadequacy. Positional hierarchy and embeddedness of an actor in the community are intuitively crucial determinants of his importance. The theory of social capital asserts that an actor's importance is derived from his position in network hierarchy as well as from the potential to mobilize resources through intra-community (bonding) and inter-community (bridging) ties. Inspired by this idea, we propose a novel centrality measure social centrality (SC) for actors in social networks. Our measure accounts for—(1) an individual's propensity to socialize, and (2) his connections within and outside the community. These two factors are suitably aggregated to produce social centrality score. Comparative analysis of SC measure with classical and recent centrality measures using large public networks shows that it consistently produces more realistic ranking of nodes. The inference is based on the available ground truth for each tested networks. Extensive analysis of rankings delivered by SC measure and mapping with known facts in well-studied networks justifies its effectiveness in diverse social networks. Scalability evaluation of SC measure justifies its efficacy for real-world large networks.

Abstract

The present work reports the comparative study of structural and optical properties of ZnO Nanorods grown on Graphene Oxide (GO) and ITO. For this purpose, GO has been successfully synthesized via Hummer's method while electrochemical method has been used for the synthesis of ZnO nanorods. The structural and optical properties of the as-grown samples were studied using FESEM, EDX, XRD, FTIR and Raman spectroscopy. An improvement in density of ZnO nanorods with hexagonal structure is indicated by the FESEM micrographs. XRD analysis confirms that crystal structure of ZnO nanorods is not significantly disturbed by GO, in addition a reduction in lattice strain has been observed for the samples grown on GO. Raman and FTIR spectroscopy has also been performed to probe the structural integration of ZnO crystal structure and the results are in consensus with that of XRD analysis. The study indicates the potential application of GO as substrate material for ZnO nanorods based devices.

Abstract

Recent literature indicates the use of graphene oxide (GO), derived from 2D material graphene as being the active material in membranes for water purification and desalination applications, mainly because of it exhibiting unique properties including high mechanical strength, excellent chemical stability, strong hydrophilicity, and excellent anti-fouling properties (Dreyer *et al* 2010 *Chem. Soc. Rev.* **39** 228, Dikin *et al* 2007 *Nature* **448** 457 and Koinuma *et al* 2012 *J. Phys. Chem. C* **116** 19822). In the current study, graphene oxide has been synthesized using well established Hummer's method and thereafter utilized as membranes on porous PVDF (polyvinylidene fluoride) support for water purification applications. The effect of sonication time (5 to 60 min) during preparation of graphene oxide membrane has been investigated vis-à-vis water purification abilities of the developed membranes. Related characterizations like dynamic light scattering (DLS), Raman

Circular restricted three-body problem when both the primaries are heterogeneous spheroid of three layers and infinitesimal body varies its mass

Abdullah A. Ansari, Ziyad Ali Alhussain & Sada Nand Prasad

Journal of Astrophysics and Astronomy **39**, Article number: 57 (2018) | Cite this article

129 Accesses | **12** Citations | Metrics

Abstract

The circular restricted three-body problem, where two primaries are taken as heterogeneous oblate spheroid with three layers of different densities and infinitesimal body varies its mass according to the Jeans law, has been studied. The system of equations of motion have been evaluated by using the Jeans law and hence the Jacobi integral has been determined. With the help of system of equations of motion, we have plotted the equilibrium points in different planes (in-plane and out-of planes), zero velocity curves, regions of possible motion, surfaces (zero-velocity surfaces with projections and Poincaré surfaces of section) and the basins of convergence with the variation of mass parameter. Finally, we have examined the stability of the equilibrium points with the help of Meshcherskii space–time inverse transformation of the above said model and revealed that all the equilibrium points are unstable.

An EOQ Model for Deteriorating Items with Selling Price Dependent Exponential Demand for Time Varying Holding and Deterioration Costs

AUTHORS

Sachin Kumar Verma

Mohd. Rizwanullah

Chaman Singh

DOI: https://doi.org/10.14419/ijet.v7i4.41.24294

PUBLISHED: 2018-12-19

Keywords: Deteriorating items, price and time dependent demand, shortages and time varying holding cost, Lead time.

ABSTRACT Research investigation of the past few decades shown that the researchers developed economic order quantity (EOQ) model for perishable items under constant deterioration and constant demand. Though, in actual practice it is not true. This paper involved a representation of an inventory control model, in which perishable items has been taken with a price as well as an exponential dependent demand. The measured items in the model are deteriorating in nature based on time dependent deterioration rate. In the earlier studies the holding cost often treated as a constant, which is not suited to the most of the practical life situations. In real practical situation some kind of items treat holding cost is a function of time, which is increase as the time increases. In this paper, a model is developed which included the time dependent linear holding cost. We have achieved the estimated optimal solution under the given assumption according to the situation. A numerical example is presented to demonstrate the model and the sensitivity analysis of various parameters is approved out for the validation of the proposed method.

A production inventory model with selling price and stock sensitive demand under partial backlogging

Deo Datta Aarya and Mukesh Kumar

Published Online: March 29, 2018 • pp 350-363 • https://doi.org/10.1504/IJMOR.2018.090802

ABOUT

Abstract

In the proposed paper we develop an inventory model for instantaneous deteriorating items with multi variate function of demand rate. Generally, we observe that the demand for any product depends on so many factors, out of which the available stock and selling price are the main factors. So in this paper we have assumed that the demand rate is a function of stock and selling price. The production rate is taken as a function of demand rate. The shortages are allowed and it is assumed that the occurring shortages will be backlogged for which the backlogging rate is a function of waiting time. The numerical example and sensitivity exploration with respect to various parameters are also cited to illustrate the study.

Keywords

inventory, shortages and partial backlogging, multi variate demand rate, deterioration rate, production

Abstract

Present study reports the pinning–depinning mechanism in Co embedded Al_2O_3 matrix subjected to Ar^+ ion irradiations. Angular variation studies of the scaled coercivity are carried out and a comparison to existing theoretical models indicates that the dominant reversal mechanism is due to pinning. The origin of pinning is attributed to the displacement of Co atoms from their lattice sites, as a result of ion bombardment. The Monte Carlo simulations suggest that the observed magnetic behavior is well explained by pinning induced strain anisotropy in the system.

Polarization dependent charge control model for microwave performance assessment of AlGaN/GaN/AlGaN double heterostructure HEMTs

Nisha Chugh, Monika Bhattacharya, Manoj Kumar, S. S. Deswal & R. S. Gupta

Journal of Computational Electronics **17**, 1229–1240 (2018) | Cite this article

Abstract

An accurate polarization dependent charge control-based analytical model is proposed for microwave performance assessment of $Al_{0.15}Ga_{0.85}N/GaN/Al_{0.15}Ga_{0.85}N$ double heterostructure high electron mobility transistors (DH-HEMTs) in terms of current, transconductance, gate capacitances and cutoff frequency. An analytical expression correlating the sheet carrier concentration in the two 2DEGs formed at the upper and lower heterointerfaces of a DH-HEMT is obtained. AlGaN/GaN/AlGaN DH-HEMTs are found to exhibit superior RF performance as compared to its single heterostructure counterpart in terms of higher drain current, improved transconductance, higher gate capacitance and higher unity-gain cutoff frequency. This improvement in the DH-HEMT is mainly attributed to the formation of two 2DEGs (at top and the bottom heterointerface) as compared to the single 2DEG in a SH-HEMT. The variation of drain current with drain voltage and with gate voltage of AlGaN/GaN SH-HEMTs and AlGaN/GaN/AlGaN DH-HEMTs is obtained analytically and found to agree reasonably well with that obtained using ATLAS 2D device simulation, thereby validating the proposed model.

Abstract

LARVICIDAL ACTIVITIES OF PETROLEUM ETHER EXTRACTS OF DIFFERENT FRUIT PEEL WASTES AGAINST AN INDIAN STRAIN OF FILARIAL VECTOR, CULEX QUINQUEFASCIATUS SAY (DIPTERA: CULICIDAE)

Shrankhla and Sarita Kumar*

ABSTRACT

Objective: The larvicidal activity of the petroleum ether extracts of different fruit peels was assessed against the early fourth instar of Culex quinquefasciatus (Cx. quinquefasciatus). Methods: Petroleum ether extracts of peels of six common fruits were prepared and evaluated against early fourth instar larvae of Cx. quinquefasciatus using WHO standard procedure. The results were statistically analyzed to explore the most efficient extract. Results: Out of the six extracts, the Citrus sinensis and Mangifera indica peel extracts were found the most effective. Other tested fruit peel extracts resulted in 10-80% larval mortality after 24 to 48 hours of exposure. The larvicidal bioassays with C. sinensis resulted in LC50 and LC90 values were 31.345 ppm and 75.313 ppm, respectively as compared to high LC50 and LC 90 values of 195.97 ppm and 633.05 ppm obtained with M. indica. Conclusions: The petroleum ether extract of C. sinensis peels was found as the most effective extract against early fourth instar of Cx. quinquefasciatus amongst the other tested fruit peel extracts. Further investigations are needed to identify the bioactive component and formulate control strategies.

Keywords: Citrus sinensis, Culex quinquefasciatus, Fruit peels, Larvicidal potential, Mangifera indica.

Abstract

Development of nanoparticles (NPs) as a part of cancer therapeutics has given rise to a new field of research - cancer nanomedicine. In comparison to traditional anti-cancer drugs, NPs provide a targeted approach which prevents undesirable effects. In this communication, we have reviewed the role of gold and silver NPs (AgNPs) in the cancer nanomedicine. The preparation of gold NPs (AuNPs) and AgNPs can be grouped into three categories - physical, chemical and biological. Among the three approaches, the biological approach is growing and receiving more attention due to its safe and effective production. In this review, we have discussed important methods for synthesis of gold and AgNPs followed by techniques employed in characterization of their physicochemical properties, such as UV-visible spectroscopy, electron microscopy (TEM and SEM) and size and surface analysis (DLS). The mechanism of formation of these NPs in an aqueous medium through various stages - reduction, nucleation and growth has also been reviewed briefly. Finally, we conclude our review with the application of these NPs as anti-cancer agents and numerous mechanisms by which they render cancer cell toxicity.

ABSTRACT

We determine the geometrical and viewing angle parameters of the Large Magellanic Cloud (LMC) using the Leavitt law based on a sample of more than 3500 common classical Cepheids (FU and FO) in optical (V, I), near-infrared (JHK_s), and mid-infrared ($[3.6]$ μm and $[4.5]$ μm) photometric bands. Statistical reddening and distance modulus free from the effect of reddening to each of the individual Cepheids are obtained using the simultaneous multiband fit to the apparent distance moduli from the analysis of the resulting Leavitt laws in these seven photometric bands. A reddening map of the LMC obtained from the analysis shows good agreement with the other maps available in the literature. Extinction-free distance measurements along with the information of the equatorial coordinates (α, δ) for individual stars are used to obtain the corresponding Cartesian coordinates with respect to the plane of the sky. By fitting a plane solution of the form $z = f(x, y)$ to the observed three-dimensional distribution, the following viewing angle parameters of the LMC are obtained: inclination angle $i = 25.^\circ 110 \pm 0.^\circ 365$, and position angle of line of nodes $\theta_{\rm lon} = 154.^\circ 702 \pm 1.^\circ 378$. On the other hand, modelling the observed three-dimensional distribution of the Cepheids as a triaxial ellipsoid, the following values of the geometrical axes ratios of the LMC are obtained: 1.000 ± 0.003: 1.151 ± 0.003: 1.890 ± 0.014 with the viewing angle parameters: inclination angle of $i = 11.^\circ 920 \pm 0.^\circ 315$ with respect to the longest axis from the line of sight and position angle of line of nodes $\theta_{\rm lon} = 128.^\circ 871 \pm 0.^\circ 569$. The position angles are measured eastwards from north.

Abstract

The significance and robustness of Free and Open Source Software (FOSS) are now well known at stages of development as well as deployment. It's natural to assume that the products of FOSS to be deployed as a preference over the commercially available propriety software. However, proprietary software not only exists but is also thriving. The present paper looks into the aspect of adoption of FOSS, with special emphasis to India. The two natural arena for adoption- Governance and Academia are chosen for study. The policy initiatives, frameworks and challenges in the implementation of FOSS in these two areas are discussed, while giving instances of its successful adoption. The study also discusses in brief the adoption of FOSS in business enterprise, where its adoption is dynamic and accelerated. Several challenges in adoption of FOSS over propriety software are also pointed out.

Keywords: Adoption, FOSS, Proprietary software

INTRODUCTION

The Free and Open Source Software (FOSS) movement attained prominence in the 1980s, primarily to unshackle the restrictions imposed on the use of copy righted software, now known as CSS (Closed Source Software). Today, although one may not be aware, FOSS is actually providing for the computational requirements for a large spectrum of products and services which make the modern, technologically intensive digital life possible. Most of the smart phones (android based), servers and portals, ATMs, supercomputers, databases etc around the world are FOSS driven. In India, two humongous citizen-specific projects – Aadhar's online infrastructure and the railway booking website utilizes the Linux servers. The FOSS provides a myriad of advantages over the CSS at all stages – development, distribution and research, which have been extensively mentioned in the literature [1-5]. Given the intrinsic freedom of usage, customization, propagation and the relative cost effectiveness which all products of FOSS offers, the adoption of FOSS by a country like India could have been a natural and prudent choice as the nation endevours to upscale the use of IT (information technologies) in its pursuit of digital governance. In this context, one may be betting on India becoming the global FOSS hub. It's evident to expect that the India is a fertile ground for the nurturing of a strong and mature FOSS ecosystem. A FOSS ecosystem comprises of a multitude of stakeholders – government, academic institutions like schools and colleges, FOSS solution providers and the FOSS community. Moreover, in India there is no dearth of business opportunities for providing IT solutions to enterprise. This is because India is only next to China in having the largest base of Internet users, notwithstanding the fact that 80 per cent of its population still needs to go online. When this is seen in the background of the availability in the last two decades of large number of reliable and robust FOSS products, which provides solutions for all domains, wherein the CSS have hitherto provided the services (Refer Table 1) the above expectation is certainly not misplaced.

So, where does India stand on the adoption of free software? The adoption of FOSS in India, until now can be described as patchy and sporadic, without a concerted push to adopt FOSS in the daily computational needs of various spheres viz., Governance, academia and business enterprise. However, it must be mentioned here that although the growth of FOSS in India has witnessed a faster rate than the past, the FOSS ecosystem is far from the threshold level of maturity. This has resulted into a narrow user base for FOSS in India. The government's efforts for FOSS adoption have been varied. While some efforts are subtle, voluntary and staggered, some migrations to FOSS have been hard and coercive. In most cases, migration to FOSS are justified from the perspectives of cost and security and its salient features of being participative, egalitarian and democratic is not emphasized sufficiently. While the goal of making India a global hub for FOSS is laudable, it becomes necessary to examine the extent of adoption and the associated challenges in the migration to FOSS for the computational needs of the digital society which we envisage in India. The present paper surveys the extent of adoption of FOSS in the three major areas of the Indian society i.e., Governance, academia and business enterprise. The study also attempts to identify the impediments in each of these spheres which are inhibiting the development of a supportive and mature ecosystem around FOSS which can harness FOSS to its full potential.

Abstract

The present paper reports deviation in the intensity of light transmitted through the film of ZnO spherical nanostructure (SNSs) with the exposure of humidity at room temperature. For this purpose, the precursor of ZnO SNSs was prepared and used for coating thin film on borosilicate substrates. The efficient dye-sensitized solar cells (DSSCs) are promisingly low-cost molecular solar cell devices. ZnO SNSs are promising materials used to use to create photoanodes for DSSCs. The film was then investigated using SEM, HR-TEM, XRD and UV–visible transmittance techniques. Further, it was employed as transmission based optical humidity sensor, the maximum sensitivity of which was found a ~ 1.81 μW/%RH with response and recovery time of 36 s and 124 s respectively. The sensor showed ~97% reproducible results. The fabricated ZnO SPSs based DSSC shows a short circuit current density (J_{sc}) of 3 mA/cm^2, open circuit voltage (V_{oc}) of 0.62 V and efficiency (η) of 1.3% at one sun condition.

Abstract

In the current scenario, nanoscience and nanotechnology are playing a vital role in the upliftment of the quality of human life. The quantum confinement effect that arises at the nano-dimensional particles, changes the properties of the material in a drastic way. The present paper reports the successful synthesis of $BaTiO_3$ using rotary evaporator and fabrication of sensing elements by deposition of films on flat borosilicate glass substrates using 2-methoxy ethanol and homogeneous precursor in the ratio of 1:4, 2:4, 3:4 and 4:4. These films were then annealed at 650 °C and characterized through various techniques. Morphological investigation as obtained from SEM reported the cubical clusters and the dimensionality of these clusters, decreases with increase in the concentration of 2-methoxy ethanol. An optical investigation done through UV–Vis spectrum showed the absorbance in the UV range and Tauc plot estimated the optical band gaps of 3.842, 3.854, 3.864 and 3.872 eV for the respective films. Structural information as obtained from XRD of the film having 2-methoxy ethanol and homogeneous precursor in the ratio of 4:4 gave minimum crystallite size of ~ 18 nm. Further, these films were employed as opto-electronic humidity sensor where the maximum sensitivity of the sensing elements was found as 2.15, 2.79, 3.28 and 3.67 μW/%RH respectively. Thus as the concentration of 2-methoxy ethanol in the solution increases, the properties of the material increases and hence the humidity sensing potency also increases.

Abstract

Perovskite sensitizer materials based solar cell (PSSC) is freshly seemed as warm topic because very soon they achieve higher efficiency (~20%) at incident light intensity 100 mw/cm^2 (1 sun condition). This paper deals the fabrication, characterization as well as application of perovskite material. Perovskite material i.e. $MASnCl_3$(CH_3NH_3SnCl3) was composed by coordinate statement of equimolar convergence of CH_3NH_3Cl and tin $SnCl_2$ in DMF arrangement. It was extra portrayed utilizing different characterization methods like X-Ray diffraction (XRD), UV–vis ingestion spectroscopy and Scanning electron microscope (SEM). PSSC has been fabricated utilizing methyl ammonium tri-tin chloride ($CH_3NH_3SnCl_3$) perovskite and polyethylene oxide (PEO) solid polymer electrolyte(SPE)sandwiched between perovskite working electrode (WE) and platinum counter electrode (CE) and its implementation at room condition has been accounted for in this paper. The fabricated PSSC demonstrates a short out current density (Jsc) of 1.8 mA/cm^2, Voc of 0.48 V, fill factor of 0.68 and efficiency (η) of 0.60% at one sun condition.

The present work reports the preparation of Titania(TiO_2) thin film by sol-gel technique and its Liquefied Petroleum Gas (LPG) sensing. TiO_2 exists in numerous phases possessing different structural properties like amorphous, anatase or anatase/rutile mixed phases. The structural analysis confirmed the formation of TiO_2 having an average crystallite size 21 nm. SEM showed the regular and porous surface morphology. The band gap of the material was found as 3.65 eV. This film was employed for LPG sensing and variations in resistance with exposure of LPG were observed. Sensor response (S) as a function of time was calculated and its maximum value was found as 2.8 for 4% vol. of LPG with a response and recovery times of 240 sec and 248 sec respectively.82

Abstract

Developing new technologies that could lead to alternatives to the traditional silicon-based solar panels and to efficiently light the world in the future, is critically important because of limited natural petroleum resources. Dye-sensitized solar cells (DSSCs) are promisingly efficient and clean hybrid, organic–inorganic, low-cost molecular solar cell devices. Because of their unique, multifunctional properties, zinc oxide (ZnO) nanostructures are promising materials to use to create photoanodes for DSSCs. ZnO was one of the first metal oxides which used in dye-sensitized solar cells. It exhibits a unique combination of potentially interesting properties such as high bulk electron mobility and probably the richest variety of nanostructures based on a very wide range of synthesis routes. The fabricated ZnO nanoneedle based DSSCs shows a short circuit current density (J_{sc}) of 20 mA/cm^2, open circuit voltage (V_{oc}) of 0.48 V, fill factor (FF) of 0.44 and efficiency (η) of 4.2% at one sun condition.

Abstract

The study proposes enhancement in self-compression of the laser pulse with relativistic nonlinearity in a plasma. It is presented that, a low-intensity laser pulse can tune the pulse duration and peak intensity of the high-intensity laser pulse. The coupled modified nonlinear Schrodinger equations (MNLS) have been established for both laser pulses in plasma. The enhancement in compression of the high-intensity laser pulse is solved by numerical methods. The nonlinearity of plasma, self-phase modulation (SPM), and group velocity dispersion (GVD) compress the laser pulse to the extremely short duration high peak intensity laser pulse. As a result, it is observed that the compression of the high-intensity laser pulse is highly sensitive to the combined intensity of both laser pulses, plasma density and even a small walkoff between two pulses can affect the high-intensity laser pulse compression.

Propagation of laser pulses of femtosecond time duration (focused through a focusing lens inside the crystalline lens) has been investigated in this paper. Transverse beam diffraction, group velocity dispersion, **graded refractive index** structure of the crystalline lens, self-focusing, and photodisruption in which plasma is formed due to the high intensity of laser pulses through multiphoton ionization have been taken into account. The model equations are the modified nonlinear Schrödinger equation along with a rate equation that takes care of plasma generation. A close analysis of model equations suggests that the femtosecond laser pulse duration is critical to the breakdown in the lens. Our numerical simulations reveal that the combined effect of self-focusing and multiphoton ionization provides the breakdown threshold. During the focusing of femtosecond laser pulses, additional spatial pulse splitting arises along with temporal splitting. This splitting of laser pulses arises on account of self-focusing, laser induced breakdown, and group velocity distribution, which modifies the shape of laser pulses. The importance of the present study in cavitation bubble generation to improve the elasticity of the eye lens has also been discussed in this paper.

ABSTRACT

For differently abled people like deaf or dumb, communication is a challenge. They make use of sign language which is not easily understandable by others and hence poses severe challenges and inconveniences for them in carrying out their day to day task. This work attempts to bridge the communication gap by designing a device that can convert the user's sign language gestures to visual form. The primary focus of the work is to design a portable, intelligent, smart, and cost-effective system using flex sensors and accelerometer which identifies the extensive hand movements of the differently abled person while communicating using sign language and in effect can facilitate him/her in communicating with others. The portable device can capture the user's sign language gestures, convert it to text and outputs the translated text to PC serial monitor, which can easily be understood and can also be converted to voice to be heard by the normal audience. The work also encompasses the design of mobile application for further assistance to differently abled persons.

Abstract

A lead (II) ion selective sensor has been facilely fabricated from Styrene - Acrylonitrile (SA) copolymer as a neutral carrier, sodium tetra phenyl borate (NaTPB) as an anionic excluder and tri butyl phosphate (TBP) as a plasticizing solvent mediator. Fabricated sensor, over a concentration range of $1x10^{-5}$-$1x10^{-1}$ mol L^{-1} revealed a best Nernstian response for Pb (II) ions with a slope of 39.60 mV/decade. Potentiometric selectivity coefficient values as determined by Fix Interference Method (FIM) and Match Potential Method (MPM) indicated that the electrode has good selectivity of Pb^{2+} ion over other heavy metal ions. The performance of proposed sensor in non aqueous mixtures up to 20 % (v/v) ethanol was satisfactory. The effect of surfactant and detergent on the working of Pb^{2-} ion selective electrode was also studied. The electrode can be used for the determination of lead ion pollution in waste water sample.

Keywords: styrene, acrylonitrile, copolymer, ion selective electrode, potentiometric sensor

Introduction

A large number of heavy metals and their compounds are found in the industrial waste and responsible for the environmental pollution. The major sources of lead wastes are lead battery effluent, paint and leather industry. World Health Organization (WHO) [1] has recognized an action level of 10 ppb (µg/L) for lead in drinking water. Therefore, reliable and convenient determination of lead (II) ion is significantly important and emergent in monitoring human health effects and the environment. Lead is a strong poison and tends to

might not be available in most analytical laboratories [11]. To monitor lead metal, membrane sensors are well-known analytical tools used for the selective and direct measurement of a wide variety of different ions in complex biological and environmental samples. Potentiometric sensors is a direct method that does not require a pretreatment of samples and has noticeable advantages including simple instrumentation, fast response, wide dynamic range, high analyte selectivity, minimal use of toxic solvents, superior detection limit,

Abstract

The simultaneous inhibition of polo-like kinase 1 (PLK1) and BRD4 bromodomain by a single molecule could lead to the development of an effective therapeutic strategy for a variety of diseases in which PLK1 and BRD4 are implicated. Compound **23** has been found to be a potent dual kinase–bromodomain inhibitor (BRD4-BD1 IC_{50} = 28 nM, PLK1 IC_{50} = 40 nM). Compound **6** was found to be the most selective PLK1 inhibitor over BRD4 in our series (BRD4-BD1 IC_{50} = 2579 nM, PLK1 IC_{50} = 9.9 nM). Molecular docking studies with **23** and BRD4-BD1/PLK1 as well as with **6** corroborate the biochemical assay results.

Abstract

A two-step method for the (3 + 2) cycloaddition of azomethine ylides followed by a double S_N2 substitution-based (5 + *n*) annulation is introduced for the modular synthesis of dihydrobenzoxazine, tetrahydrobenzoxazepine and tetrahydrobenzoxazocine derivatives. After a quick water wash without further purification, the (3 + 2) cycloaddition intermediates were used for the (5 + *n*) annulation to afford products. Green chemistry metrics analysis of the

ABSTRACT

Enzymes are the most capable catalysts, offering considerably more focused processes contrasted with chemical catalysts. The quantity of modern applications for enzymes has detonated as of late, principally inferable from advances in protein building innovation and environmental and monetary necessities. In this, we audit late advancement in protein biocatalysis, and talk about the patterns and procedures that are prompting more extensive mechanical compound applications. The difficulties and openings in creating biocatalytic processes are additionally talked about. Enzymes as mechanical biocatalysts offer various points of interest over conventional chemical processes as for supportability and process proficiency. Protein catalysis has been scaled up for business processes in the pharmaceutical, nourishment and refreshment enterprises, albeit further upgrades in dependability and biocatalyst usefulness are required for ideal biocatalytic processes in the vitality area for biofuel creation and in gaseous petrol change. The specialized hindrances related with the execution of immobilized enzymes recommend that a multidisciplinary approach is fundamental for the improvement of immobilized biocatalysts relevant in such modern scale processes. In particular, the cover of specialized aptitude in catalyst immobilization, protein and process designing will characterize the up and coming age of immobilized biocatalysts and the effective scale-up of their initiated processes. This audit talks about how biocatalysis has been effectively conveyed, how protein immobilization can enhance modern processes, and in addition centers around the investigation devices basic for the multi-scale execution of compound immobilization for expanded item yield at most extreme market gainfulness and least calculated weight on the environment and client.

The population of Delhi has increased seventy fold during the last century, with concurrent expansion of urban or concretized landscape (Anonymous, 1912; Anonymous, 2011). Presently, the urbanized portion of Delhi is dotted with numerous parks and gardens harbouring domesticated flora. An evident effect of urbanization of a geographical area is change in the species composition of plants and animals, and, in fact, urbanization introduces novel ecosystems (Lepczyk *et al.*, 2017; Donahue & Lambert, 2015). Insects such as butterflies, which require larval host plants for their survival and are sensitive to the effect of urbanization, can act as an indicator of biodiversity in urban settings (Clark *et al.*, 2007; Fontaine *et al.*, 2016; Dennis *et al.*,

The first partial list of butterflies of Delhi was prepared by Longstaff (1912), mentioning 21 species. An elaborate list of 62 butterflies was made by Jandu (1942, 1943) and Donahue (1967) listed 77 species of butterflies. The list was expanded to include 86 species by Larsen (2002). Recently, a checklist of 115 species of butterflies seen in Delhi was published by Biswas *et al.* (2017). The increase in the butterfly count over time, as evident from these lists, could be the effects of gradual changes in the pattern of floral diversity and habitat due to horticultural practices and urbanization. Alternatively, it may merely be the result of increased observation.

Here, we report the recent sightings of two species of butterflies, *Jamides bochus* (Dark Cerulean) and *Prosotas nora*

Synchronization of fractional order Rabinovich-Fabrikant systems using sliding mode control techniques

SANJAY KUMAR, CHAMAN SINGH, SADA NAND PRASAD,
CHANDRA SHEKHAR and RAJIV AGGARWAL

In this research article, we present the concepts of fractional-order dynamical systems and synchronization methodologies of fractional order chaotic dynamical systems using slide mode control techniques. We have analysed the different phase portraits and time-series graphs of fractional order Rabinovich-Fabrikant systems. We have obtained that the lowest dimension of Rabinovich-Fabrikant system is 2.85 through utilization of the fractional calculus and computational simulation. Bifurcation diagrams and Lyapunov exponents of fractional order Rabinovich-Fabrikant system to justify the chaos in the systems. Synchronization of two identical fractional-order chaotic Rabinovich-Fabrikant systems are achieved using sliding mode control methodology.

Key words: fractional-order chaotic system, chaos synchronization, Rabinovich-Fabrikant system, Lyapunov exponents

1. Introduction

Chaos, an inevitable phenomenon is the part of nonlinear systems. It is highly sensitive to the initial conditions. This sensitivity is popularly known as the butterfly effect [1]. Since Pecora and Carroll established the concept of chaos synchronization with different initial conditions, it (chaos synchronization) has been received much attention in the field of research. Synchronization of two or more than two chaotic dynamical systems is one of most important applications of chaos. Last several decades, chaos synchronization has been become the research

An Optimal Policy for Deterministic Model for Time Proportional Deteriorated Inventory with Different Demand Rate Pattern

Sachin Kumar Verma, Research Scholar, Department of Mathematics and Statistics, Manipal University, Jaipur, Rajasthan, India. Email: manipal.kumar.sachin1985@gmail.com

Mohd. Rizwanullah, Associate Professor, Department of Mathematics and Statistics, Manipal University, Jaipur, Rajasthan, India.

Chaman Singh, Assistant Professor, Acharya Narendra Dev College, University of Delhi, Govindpuri, Kalkaji, Delhi, India.

Abstract--- In this paper, we have formulated an economic order quantity inventory model for a deteriorating item having a twofold deterministic demand rate. The Constant demand rate in the first part of the cycle and the exponential demand rate in the second part of the cycle has been taken. We also considered deterioration rate is time sensitive in nature and Shortages are not the part of this model. A complete solution procedure is provided to demonstrate the proposed model. Also, a numerical example and sensitivity analysis of various unknown parameters illustrated in this model.

Keywords---Constant and Time Dependent Exponential Demand Rate, Deteriorating Items, EOQ, Time Proportional Deterioration Rate.

I. Introduction

In today's competitive world, Mostly business organizations trying to stress on inventory management and their problems, which occurred frequently. It is known that every business organization showing their interest to obtain economic order quantity (EOQ), through which minimized total average inventory cost can be achieved. During the last couple of decades, it has been observed that, many researches working in the direction to control and maintain the inventory in the better and efficient way. In real practical life situation, decay or deterioration of normal talk in now days. Vegetables, fruits, foods are some example of some items having deterioration in nature. As the time increases, deteriorating items keep losing their original value with regard the quantities and qualitative aspect. Therefore, Ignorance of deteriorating factors while analyzing the model leads to harmful results. So it is an unavoidable factor, which should be given attention during the optimization inventory problems Sharma, A. et.al [24] [25] suggested the inventory model in which different demand rate has been taken with a different time interval. Commercial based lot size model for price sensitive dependent demand.

Abstract

Streptomyces sp. strain 130 possesses multiple uncharacterized extracellular enzyme producing genes. Enzymes from these genes may fulfil the intense demand of stable and effective extracellular enzymes in various industries. Taxonomy of *Streptomyces* sp. strain 130 was validated by FAME analysis. Strain 130 was screened for the presence of chitinase producing genes of family 18 and 19 using SC1F/SC2R and F19F2/F19R primer sets respectively. Whole genome sequencing was done using Illumina Next Seq 500 system. In the analysis of draft genome of *Streptomyces* sp. strain 130, the genome size was found to be 7.1 Mb. Blastn and NCBI-conserved domain search tool were used to find similarity percentage with genes in existing database and enzyme family respectively. Ten chitinase, six xylanase and one cellulase producing genes were present in draft genome. Among the ten chitinase

Abstract

The present investigation aims to study the diversity of ciliates from different habitats in and around Delhi, India, and the correlation of this diversity with soil quality (agricultural lands (site 1 and 2), dump yards (site 3 and 4), sewage treatment plant (site 5), residential land (site 6), landfill (site 7) and barren land (site 8)). Various physicochemical parameters of the different soil samples were studied and analysed for soil texture, interstitial water, pH, conductivity, total organic carbon, total organic matter, total nitrogen and phosphorous content, using standard protocols. Seventeen ciliate taxa belonging to four classes, seven orders, ten families, and 17 genera were recorded, with the maximum number of species (eleven) belonging to the class Spirotrichea. Ciliate diversity was highest at sites 5 and 6 and lowest at sites 1 and 2. *Spathidium* sp. was the dominant species in the conditioned land (site 8), while the ciliate *Colpoda* sp. was

ABSTRACT

Formulae display: MathJax

In recent years, dispersion of nanomaterials in liquid crystal media has attracted a great deal of attention for their applications in various fields and basic understanding. In this regard, nanocomposites of ferroelectric liquid crystals hold a great promise for technological advancement in displays, sensors, development of hybrid materials for optical applications and others. With the emphasis on the properties of ferroelectric liquid crystals, this paper presents a summarizing overview with critical comments on the progress made in last one decade in understanding the influence of nanoparticles on the ferroelectric liquid crystals. The dispersion of nanoparticles in liquid crystal (host material) significantly influences its properties, thereby making the dispersed material more promising for potential applications.

Abstract

The potential of electrochemically deposited ZnO nanorods using graphene oxide (GO) coated inter digital electrode (IDE) as substrate material for gas sensing applications has been reported. For this purpose, GO solution was synthesized via Hummer's method and coated over IDE of aluminium fabricated on the glass plate. Later ZnO nanorods were deposited on it using electrochemical method. For the structural, morphological and elemental analysis, as-grown nanorods were characterized by

Abstract

We study the setting up of relativistic ponderomotive non-linearity in an under-dense collisionless cold plasma. Using the fluid model, coupled system of equations of the laser beam and electron plasma oscillations has been derived. We present the numerical simulation for this coupled system of equations, when the coupling arises through relativistic ponderomotive non-linearity. The filamentation of the laser beam has been found to vary appreciably with

Abstract

Due to emergence of drug resistant pathogens, nearly all available medicines are becoming ineffective against these life threatening pathogens so there is dire need for the discovery of compounds having unique modes of action. During our previous studies, actinomycetes designated as 196 and RI.24 were isolated, screened for bioactive compounds production and characterized using 16S rRNA gene sequencing. Colony 196 was identified as strain of *Streptomyces albolongus* (100% sequence similarity) and RI.24 as strain of *Streptomyces enissocaesilis* (100% sequence similarity). In current study, potential bioactive compounds produced by these strains were characterized. Cold extraction method was applied for taking out of bioactive compounds from actinomycetes. Minimum inhibitory concentration (MIC) determination of compounds from these strains showed activity nearly in the range of commercial antibiotics (strain 196 0.0075 mg/ml, RI.24 0.25 mg/ml and chloramphenicol 0.0075 mg/ml, ampicillin 0.025 mg/ml). Structural elucidation of these compounds was carried out using spectroscopic techniques of LC–MS/MS and ^{1}H NMR. Compounds K-252-*C*-Aglycone, indolocarbazole alkaloid, decoyinine, cycloheximide were detected from strain 196

Abstract

Response of heavy metals namely cadmium (Cd) and copper (Cu) on the expression of stress responsive genes in the fresh water ciliate, *Tetmemena* sp. (single cell eukaryote) was studied. Stress responsive genes include heat shock protein genes and genes involved in antioxidant defence system. Quantitative real time PCR (qRT-PCR) was employed to evaluate the effects of Cd and Cu on the expression of cytosolic *hsp70* and *Mn-sod* genes. Increase in the expression of these genes was observed after exposure with the heavy metals. The macronuclear cytosolic *hsp70* and *Mn-sod* (*SOD2*) genes were also sequenced and characterized using various bioinformatics tools. In antioxidant defence system, the superoxide dismutase (SOD) family is a first line antioxidant enzyme group involved in catalysing reactive oxygen species (ROS) to hydrogen peroxide and molecular oxygen. Influence of Cd and Cu on the activity of SOD has already been reported by our group. Therefore, the enzymatic activities of antioxidant enzymes, catalase (CAT) and glutathione peroxidase (GPx) were studied in the presence of Cd and Cu and there was significant increase in activity of these enzymes in concentration dependent manner. This study suggests that cytosolic *hsp70*, *Mn-sod* and the antioxidant enzymes such as CAT and GPx can be used as effective molecular biomarkers for heavy metal

Abstract

Ciliated protists have attracted wide interest among researchers from the Indian subcontinent in the last few years. An International Symposium on Ciliate Biology (ISCB) 2018 was held on 04–06 April 2018 at the India Habitat Centre, New Delhi, India. The symposium represented a synergy with International Research Coordination Network for Biodiversity of Ciliates (IRCN-BC), an affiliate society of International Society of Protistologists (ISOP). The symposium provided a platform for Indian and International delegates to exchange knowledge, present their latest research findings, and establish collaborations as well as creating a networking opportunity for undergraduate and postgraduate students. Nine foreign delegates from 5 countries and 300 Indian delegates actively participated in the event which included 22 oral and 57 poster presentations.

RESEARCH on ciliated protists has ramified in the Indian subcontinent in last few years. The first International Symposium on Ciliate Biology held at Sri Guru Tegh Bahadur Khalsa College, University of Delhi, on 06–07 February 2007 was a successful event (Lynn 2007). The second International Symposium on Ciliate Biology (ISCB) 2018 was held on 04–06 April 2018 at the India Habitat Centre, New Delhi, India. The symposium resulted from a synergy with the International Research Coordination Network for Biodiversity of Ciliates (IRCN-BC), an

Abstract

Novel Schiff bases (SBs) were synthesized by condensation of 2-(1-Amino benzyl) benzimidazole with heterocyclic and aromatic carbonyl compounds. The structural characterization was done using ^{1}H, ^{13}C NMR, FTIR and ES-MS spectroscopic techniques. The *in silico* pharmacokinetics showed that nearly all compounds obeyed Lipinski rule of 5 with low toxicity and metabolic stability. The global reactivity descriptors were calculated using DFT approach. The molecular docking result of SBs with ct-DNA suggested interaction *via* groove binding mode. The antibacterial activity was tested against *S.aureus* and *E.coli*, indicated significant inhibition than reference drug. The compound **4d** gave best results at 50 μg ml^{-1} concentrations. UV/Vis and Fluorescence spectroscopy tools were used to evaluate ct-DNA binding ability of compounds **4a–e** through hypochromic shift. The steady state fluorescence predicted a moderate binding constant of 1.12×10^{4} for **4d**, indicative of non-intercalative mode.

REVIEW

Recent Trends in the Synthesis of Benzimidazoles From *o*-Phenylenediamine *via* Nanoparticles and Green Strategies Using Transition Metal Catalysts

Sugandha Singhal, Pankaj Khanna, Siva S. Panda, Leena Khanna

First published: 27 October 2019 https://doi.org/10.1002/jhet.3649 | Citations: 10

Read the full text › PDF TOOLS SHARE

Abstract

Benzimidazole is a heterocyclic moiety of immense importance as it acts as a primary "biolinker" in diverse synthetic routes to obtain bioactive compounds. Substituted benzimidazoles are known to possess a varied range of pharmacological applications, namely, anti-cancer, anti-diabetic, anti-inflammatory, and antiviral like anti-HIV and anti-fungal. A number of reviews covering the important aspects of benzimidazoles such as pharmacological activities, SAR studies, and well-known methods of synthesis have appeared in the literature. However, green synthetic methods particularly using transition metal (TM) catalysts and their nanoparticles, although being more viable and extensively applied by researchers in the present scenario, have not been exclusively and expansively reviewed. Besides this, the vital precursors required for knitting the skeleton of benzimidazole are mainly *o*-aryldiamines. The conventional synthesis generally involved the condensation of these diamines with carbonyl/carboxylic acid derivatives either *via* high temperature heating or *via* adding strong acids, mostly resulting in poor yields or mixtures. However, recent trends are replacing these conditions by mild and green conditions through TM catalysts. Therefore, the current review emphasizes on the recent trends adopted in the synthesis of benzimidazoles using condensation reaction of *o*-phenylenediamines and various aldehydes/ester/amide/alcohols with TM in a catalytic role in nanoform and under environmentally benign green conditions.

Abstract

Tuberculosis (TB), caused by *Mycobacterium tuberculosis* (Mtb) is one amongst the top 10 causes of death worldwide. The growing rise in antibiotic resistance compounded with slow and expensive drug discovery has further aggravated the situation. 'Drug repurposing' is a promising approach where known drugs are examined for a new indication. In the present study, we have attempted to identify drugs that could target MurB and MurE enzymes involved in the muramic acid synthesis pathway (Mur Pathway) in Mtb. FDA-approved drugs from two repositories i.e. Drug Bank (1932 drugs) and e-LEA3D (1852 drugs) were screened against these proteins. Several criteria were applied to study the protein-drug interactions and the consensus drugs were further studied by molecular dynamics (MD) simulation. Our study found Sulfadoxine (−7.3 kcal/mol) and Pyrimethamine (−7.8 kcal/mol) to show stable interaction with MurB while Lifitegrast (−10.5 kcal/mol) and Sildenafil (−9.1 kcal/mol) showed most reliable interaction with MurE. Furthermore, binding free energy (ΔG_{bind}), RMSD and RMSF data and the number of hydrogen bonds corroborated the stability of interactions and hence these drugs for repurposing should be explored

https://doi.org/10.1016/j.physa.2019.04.265 | Get rights and content

Abstract

Comparing structural similarities among complex networks is an important task in several scientific and social science applications. Existing techniques for quantifying network similarity range from network-centric methods that consider *global* network topology to node-centric methods that consider *local* node-level sub-structures.

In this paper, we address the research gap between computationally expensive network-centric approaches and myopic node-centric network comparison methods by introducing a novel approach to quantify network similarity based on hierarchical graph decomposition. The approach adequately captures both global and local topology and is motivated by the observation that networks from diverse domains such as physical, chemical, biological and social systems exhibit an inherent structural hierarchy that emerges from local dyadic and triadic interactions. The proposed algorithm, *N*etwork *S*imilarity via graph *D*ecomposition (*NSD*), extracts network signatures from hierarchical decomposition of networks and uses Canberra distance to quantify the similarity between signatures. We use two well-known graph decomposition methods to expose network hierarchy resulting in two variations of NSD. We find that our approach groups similar networks better than competing algorithms. Experimentation using 40 real-world networks, 15 massive networks, and 30 large synthetic networks establishes that the proposed methodology is effective, scalable, sensitive and applicable to wide variety of networks.

The Impact Of Various Digitized Social Networking Media Through Text, Images And Videos On Language Usage

Sampurnananda Mishra, Chandra Kanta Samal, Navneet Yadav, Rama Kanta Choudhury

Abstract: The catalytic effect of social media on the diurnal course of people of the world has ushered in a new era of globalization. With the teeming multitudes of social media sites offering a universal user-friendly application in multifarious platforms has turned out to be a hunting ground for scholars and researchers from diverse fields. More so, their impact has been conspicuous among the language expounders and educators of today. The world has gone digital with the help of incredible tools of social media where people carry out global business and qualitative services. All the transactions , negotiations and deliberations happen through language conversation as a result of which language teaching and learning have become an indispensible part of social media. The language trainers introduce and execute various tools of social media which devises unique and novel ways of interaction transcending the local boundaries of the school. The notable social networking sites like Facebook, WhatsApp, Aadmodo Linkden, Me too etc equip educators to enhance their instructional skills. These widespread social networking sites offer a plentitude of openings for language educators to sharpen their digital, multi-literacy, linguistic and empirical skills. This paper probes into the theoretical bedrock of social networking in language learning and its effectiveness inside the classroom vis-a-vis the present pedagogy followed by different communities of the world. Further it intends to illuminate the fundamental issues and considerations while using social networking sites in a language classroom.

Keywords: Psycholinguistic approaches, Teeming multitudes, Multifarious platforms, Social networking , World wide web, IOT, Neural network.

1. INTRODUCTION

Information technology is playing a pivotal role in the use of technology in teaching and learning. Social networking has become the prime medium through which creation and transmission of information takes place. Social networking is in a state of flux and constant evolution. In order to facilitate learning and its quality, it has introduced and integrated new technologies like machine learning neural lays and neural network and IOT (Internent of things) to create a universal appeal among the world population irrespective of diversity of language and culture. There are a plethora of organized and unorganized tools which work together to enhance the quality of education. These tools facilitate, provide, engage and aid the process of teaching - learning. Social media can be compartmentalized into seven interconnected categories. (1) social networks (e.g., Facebook, LinkedIn); (2) bookmarking sites (e.g., Delicious, StumbleUpon); (3) social news (e.g., Digg. Reddit); (4) media sharing (e.g.,

1.1 Approaches to Social Networks

Theories on latest technology refer to the development and exploration of tools aimed at examining the plausible advantages in the field they are to be used. The studies are often received with a pinch of salt as they lack proper theoretical and practical framework. But it is an undeniable fact that they initiate the educators to the L2 contexts. These studies also suggest that the new tools would bring about a revolution in the traditional mind set of the existing classrooms. As far as social networking is concerned these tools are employed for learning a language and other social purposes. Studies by Stevenson and Liu, Blyth, prove to be utilitarian for the educators of language and open up avenues for further research.

1.2 Psycholinguistic Approaches

Psycholinguistic approaches to language learning aims at the significance of social interaction and getting noticed. There is a

Analysis of $Al_{0.15}Ga_{0.85}N/GaN/Al_{0.15}Ga_{0.85}N$ DH-HEMT for RF and Microwave Frequency Applications

Nisha Chugh, Manoj Kumar, Monika Bhattacharya & R. S. Gupta

Semiconductors **53**, 1784–1791 (2019) | Cite this article

123 Accesses | **3** Citations | Metrics

Abstract

A charge control based analytical model is followed to study the impact of donor-layer doping and gate-length on microwave frequency performance of AlGaN/GaN/AlGaN double heterostructure high electron mobility transistor (DH-HEMT). DH-HEMT is observed to be more sensitive to gate-length and doping variation as compared to single heterostructure high electron mobility transistor (SH-HEMT). The effect of gate-length and doping on various performance parameters, i.e., transconductance, drain conductance, cut-off frequency and maximum oscillation frequency has been analysed. The results so obtained are compared with simulation results and are found to be in good agreement.

PERTURBED SIX-BODY CONFIGURATION WITH VARIABLE MASS

ABDULLAH A. ANSARI[1], K. R. MEENA[2], SADA NAND PRASAD[2]

[1] *International Center for Advanced Interdisciplinary Research (ICAIR), Sangam Vihar, New Delhi, India,Email: icairndin@gmail.com*
[2] *Department of Mathematics, Acharya Narendra Dev College, University of Delhi, New Delhi, India*

Abstract. Six-body configuration is investigated with the effects of oblateness, variable mass as well as Coriolis and centrifugal forces, where four equal bodies are placed at the vertices of a square and fifth body is placed at the center of the circle on which the previous four bodies are moving. All five bodies are considered as oblate in shapes where first four bodies have same oblateness while fifth body has different oblateness. There is the sixth smallest body which varies its mass according to Jeans law. The system is also affected with small perturbations in the Coriolis and centrifugal forces. By considering these effects and using the Jeans law as well as Meshcherskii space time transformations, the system of equations of motion for the smallest body is determined. The Jacobian integral and mean motion are also admitted from this system. Further the equilibrium points, motion for forbidden regions and attracting regions are illustrated under the effects of above said parameters. Here twelve equilibrium points are exists out of which four equilibrium points are collinear, four points are on the perpendicular axis and rest four points are in four quadrants separately. Finally, the stability of these equilibrium points are examined by using Meshcherskii space time inverse transformations and found them unstable.

Key words: Perturbed six-body configuration – Coriolis and centrifugal forces – Oblateness – Attracting regions.

Abstract

An analytical approach incorporating traps (donor type) in the AlGaN layer at the top and bottom heterointerface is proposed to determine threshold voltage (V_{th}), net sheet carrier concentration (n_s) and drain current in $Al_{0.15}Ga_{0.85}N/GaN/Al_{0.15}Ga_{0.85}N$ double-heterostructure (DH) high electron mobility transistor (HEMT). Generation of carriers in the 2DEG due to detrapping of these donor traps have been thoroughly studied in the present analysis. Due to traps in the upper and lower AlGaN layer, two 2DEG channels formed, such that n_s in a DH-HEMT is nearly twice as compared to that obtained in single heterostructure (SH). Due to increased 2DEG density, drain current is more in DH-HEMT as compared to SH-HEMT. The effect of incorporation of these donor traps on V_{th}, n_s and drain current of DH-HEMT as compared to SH-HEMT has been studied. The effect of Al mole fraction, AlGaN layer thickness, mobility, trap concentration and temperature on drain current of DH-HEMT as compared to SH-HEMT has also been studied. The analysis has been performed

Highlights

- Study revealed effect of proinflammatory cytokines on *C. trachomatis*-positive SA.
- Increased expression of TNF-α, IFN-γ, IL-8 in ECT of *C. trachomatis*-positive SA.
- TNF-α, IFN-γ and IL-8 expression was significantly higher in RSA *versus* SSA.
- TNF-α and COX-2 were positively correlated with each other in infected aborters.
- Aberration in TNF-α and IFN-γ can induce COX-2 leading to immunopathogenesis of SA.

A study of software reliability on big data open source software

Ranjan Kumar, Subhash Kumar & Sanjay K. Tiwari

International Journal of System Assurance Engineering and Management **10**, 242–250 (2019) | Cite this article

502 Accesses | **7** Citations | Metrics

Abstract

With the increasing use of Open Source Software (OSS) in high speed networking, parallel processing and distributed computing, OSS has emerged as mainstream in the last decade and is now being broadly accepted even by the traditional proprietary software development companies. The major advantages of OSS over traditional software development are less development cost, availability of source code, quality and security. Software reliability—an important attribute of software quality, is defined as the probability that a software will operate free of failures or breakdown for a specified time under specified conditions (IEEE Std. 1633-2016). Investigation of Software reliability with the help of software reliability

A Case Study on R: a powerful OSS and data analysis platform

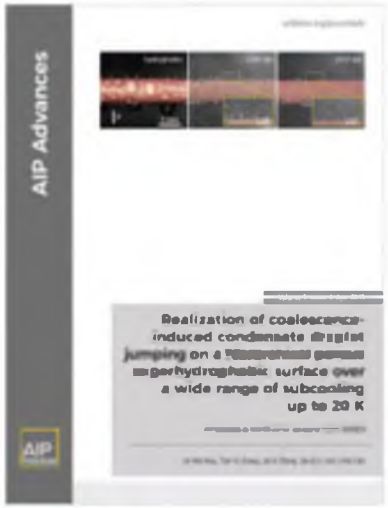
Ranjan Kumar[1], Subhash Kumar[2], Sanjay K. Tiwary[3]

Abstract

R, an open source software, has emerged as a powerful tool for statistical computing and data visualization. It is also the favoured programming language for data science in the last decade. Its open source platform has allowed a tremendous growth in its community which has contributed R packages independently. Number of R packages has grown exponentially in the last five years. This paper undertakes a case study of R wherein the popularity of R and its development paradigm is explored, while studying salient features of its organization structure. Statistical inferences are drawn with respect to organization structure by performing statistical analysis of the available data on commits in R. The bug management system - a very important attribute of software quality is probed further while carrying out statistical analysis of the bug data of R. This supports the rigorous protocol of bug management system for OSS in general and R in particular.

Keywords: Commits, Bug management system, Data science, Software quality, Visualisation

1. INTRODUCTION



In recent times effective modeling, statistics, predictive analysis, data visualizations and powerful analytics is being harnessed by data scientists and leaders in making decisions and policies in a multitude of fields ranging from broad societal mapping, online marketing trends to the development of Gentleman released this software as free open-source software in 1995 [2]. Presently, the "Comprehensive R Archive Network" (CRAN) is the core of an increasingly growing R community [3] and it serves as the central repository for all resource materials related to R, including packages of functions, tutorials and discussion forums. The official public structure for the R Community is under the aegis of the R Foundation - a not for profit organization with a prestigious list of members and supporters. R is registered under GNU (General Public License). R is a programming language used by statisticians, data scientist and anybody who need to perform statistical analysis of data and process useful information from data using various mechanisms, such as classification, regression and text analysis. Currently, R has 782K lines of code which has increased from 82K lines of codes in 1997(about 35% C, 31% FORTRAN and 20% R) [4]. Changes in the code to base R are an exclusive domain of the core team members of R. Till now a total of twenty five members of R-core have contributed to R, Currently R-core has twenty members.

1.1 Characteristics of R

R is a programming language wherein data analysis is carried out by writing functions and scripts. However R is an easy language to learn. R is characterized by an extensive set of library functions which can implement not only mathematical but techniques of other disciplines like graphical, classification,

Abstract

The present paper reports the in-situ chemical polymerization of nanocomposites thin film composed by titanium dioxide (TiO_2), zinc oxide (ZnO) and polyaniline (PANI). It was found that nanocomposites sensor is highly selective and shows response to low concentration. To improve the sensing response characteristics of ZT thin film, PANI is incorporated. Thin film based LPG sensor of ZnO-TiO_2-PANI composite was fabricated by spin coating of ZnO-TiO_2 nanoparticles doped with PANI over inter digital electrodes (IDEs). The thin film was characterized by using XRD, SEM, TEM, UV–vis, BET and FTIR. It was also tested for gas sensing properties of LPG/NO_2 which are well known flammable and toxic gases. The measured response for ZnO-TiO_2-PANI based sensor was 87 for 2000 ppm of LPG and 412 for 20 ppm of NO_2 at room temperature towards other testing gases together with Acetone, IPA, NH_3 and CO_2.

Abstract

In the present investigation, thermo-dynamical, dielectric & electro-optical characterization of a neamtic liquid crystal (NLC) and its mixtures with polyaniline (PANI) & silver nanoparticles (Ag NPs) have been carried out. To visualize the combined effect of polyaniline and silver nanoparticles, a polyaniline/silver nanocomposite has been prepared. Equal concentration of polyaniline, silver nanoparticles & polyaniline/silver nanocomposite has been taken and doped into the pure NLC material. A comparison of various LC parameters of pure NLC material and its mixtures with different dopant has also been done. Thermodynamical study suggests that the presence of polymer and nanoparticles duo in LC can tune the order parameter of LC material.

Abstract

The present paper reports the synthesis and fabrication of CeO_2-Gd_2O_3-CoO nanocomposite films using metal carboxylates as precursors. The refractive index of the film was found as 1.445538. The crystallinity was confirmed from XRD and the minimum crystallite size calculated was 9 nm. TEM analysis showed the hexagonal crystals where the minimum dimension was obtained as 6 nm. The dimensionality was further confirmed by Particle Size Analyzer. The film was then examined using SEM which revealed highly porous nature of the material. UV–Vis spectrophotometer found the absorption of the film taking place in UV region and the optical band-gap as determined

ABSTRACT

This is the second of a series related to the study of geometry of the Magellanic Clouds based on multiwavelength photometry of classical Cepheids. In this paper we determine the geometrical and viewing angle parameters of the Small Magellanic Cloud (SMC) using the Leavitt law for classical Cepheids with/without a break in the law at a certain period as reported in the literature.

Abstract

Peroxiredoxin 6 (Prdx6) is a ubiquitously expressed antioxidant non-selenium glutathione peroxidase that is known to play a major role in various physiological and pathological processes. It belongs to the family of peroxidases (referred to as Peroxiredoxins, Prdx's) that work independently of any prosthetic groups or co-factors, and instead utilize a peroxidatic thiol residue for peroxide reduction. Mammalian Prdx's are classified according to the number of Cys implicated in their catalytic activity by the formation of either inter-molecular (typical 2-Cys, Prdx1–4) or intra-molecular (atypical 2-Cys, Prdx5) disulfide bond, or non-covalent

Abstract

Influenza A virus, a respiratory pathogen manipulates various host cellular processes to establish a successful infection in a host. We had reported earlier the interaction of influenza A virus nucleoprotein with host glycolytic enzymes; alpha enolase and pyruvate kinase in A549cells. Matrix protein (M1), another multifunctional protein encoded by genome segment 7 forms the inner layer of the virion and interacts with the ribonucleoprotein complex. Nucleoprotein and matrix protein, major structural components of the virion together contribute to the stability of the capsid. Thus, we have investigated the interaction of viral matrix protein with host glycolytic enzymes; alpha enolase and pyruvate kinase. Results had demonstrated differential expression of these two glycolytic enzymes in response to matrix protein and their interaction with matrix protein by *in vitro* binding, co-immunoprecipitation and co-localization studies. Our results confirmed that viral matrix protein interacts with host glycolytic enzymes in association with viral nucleoprotein.

Abstract

Graphene based 2D materials with a surfeit of active sites and advantageously high surface to volume ratio are effectively linked to well established nanostructured semiconducting metal oxides for development of nanocomposites with enhanced gas sensing properties. Graphene Oxide (GO), a sister material of graphene, is therefore a natural choice for development of room temperature operated gas sensors. In the current investigation hydrothermally grown GO and ZnO nanorods composite (GO–ZnO–NR) is utilised for room temperature gas sensing of H_2 and SO_2 gases. Room temperature

Abstract

An analytical model for determining intrinsic short-circuit admittance (Y) parameters of AlGaN/GaN/AlGaN Double Heterostructure (DH) High Electron Mobility Transistor (HEMT) is presented. These Y parameters obtained in terms of the various small signal equivalent circuit parameters are in turn used to evaluate the enhanced microwave performance of the DH-HEMT in terms of various parameters including Unilateral Power Gain and maximum oscillation frequency. The cut-off frequency has been evaluated from short circuit current gain. The cut-off frequency (f_T) and maximum oscillation frequency (f_{max}) exhibited for DH-HEMT is 125 GHz and 215 GHz which is comparatively improved as obtained in Single

Abstract

In the present work, NO_2 gas sensor based on Cadmium sulfide (CdS) nanostructures were prepared by using the chemical route technique. CdS thin films of different thickness were prepared by spin coating technique with different speed (1000, 2000 and 3000 rpm). Prepared thin films were characterized by techniques, such as X-ray diffraction (XRD), Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), Fourier Transform Infrared spectroscopy (FT-IR) and Ultraviolet–Visible spectroscopy (UV–Vis), which offered the information about the chemical structure and morphology of CdS thin film. Gas sensing measurements for detecting

ABSTRACT

Aedes aegypti L. is the major vector accountable for the spread of several diseases of medical importance. The control strategies primarily relying on chemical insecticides have caused negative impact on our environment and human health. Thus, current study employed Citrus limetta peel extracts (CLPE) against larvae of Ae. aegypti. Silver nanocomposites (AgNCs) from CLPE were synthesised and the process of synthesis was optimized by varying temperature; volume and concentration of silver nitrate

Abstract

Objective:

To formulate **silver nanocomposites from *Achyranthes aspera*** leaf extracts and evaluate its larvicidal activity against *Aedes aegypti*.

Methods:

The **silver nanocomposites** were synthesized **from *Achyranthes aspera*** leaf extracts. The process was optimized and traced through UV-visible and photon correlation spectroscopy. The larvicidal potential of **silver nanocomposites** of ***Achyranthes aspera*** leaf extracts was assessed against the early fourth instars of

Effect of dietary stress of emamectin benzoate on the fitness cost of American bollworm, *Helicoverpa armigera* (Hübner, 1808)

Vinay Singh Dagar, Monika Mishra & Sarita Kumar

International Journal of Tropical Insect Science **40**. 1069–1077 (2020) | Cite this article

160 Accesses | **3** Citations | Metrics

Abstract

Present study assessed the effect of Emamectin benzoate (EMB) on the survival, growth and nutrition efficiency of *Helicoverpa armigera*. Dietary EMB exhibited a significant systemic toxicity in *H. armigera* larvae resulting in LD_{50} and LD_{90} value of 0.092 µg/mL and 0.156 µg/mL, respectively. Feeding with 0.05–0.2 µg/mL EMB caused 10–100% larval mortality in a dose-dependent manner. Feeding the IV instars of *H. armigera* with 0.1–1.6 µg/mL EMB-incorporated diet deterred feeding significantly. Substantial deterrent effects of EMB with lower LD_{50} values indicate the noteworthy systemic toxicity of EMB on the *H. armigera* larvae. Both choice and no-choice bioassay with dietary EMB showed a distinct preference of

Effects of β-sitosterol on growth, development and midgut enzymes of Helicoverpa armigera Hübner

Mishra Monika *(Department of Zoology, Acharya Narendra Dev College (University of Delhi), Kalkaji, New Delhi, India)*
Sharma Aarti *(Department of Zoology, Acharya Narendra Dev Coellege (University of Delhi), Kalkaji, New Delhi, India)*

Helicoverpa armigera is a global agricultural pest of serious concern. Continued use of chemical insecticides as control measures has raised grave health and environment concerns, necessitating a search for botanicals as safe alternatives. The current study investigates the effects of β-sitosterol, a bioactive phytocomponent in Thevetia neriifolia, on the growth and development, as well as on midgut enzymes of H. armigera. Dietary β-sitosterol produced dose-dependent systemic toxicity and growth inhibitory effects in H. armigera; the most significant effects were obtained with 10 µg/mL dietary β-sitosterol. Higher prepupal and pupal mortality in comparison to larval mortality and a comparatively greater reduction in average weight gained by later instars point to cumulative effects of β-sitosterol. The delayed effects were ascertained by the 82.05%-57.89% reduction in adult emergence in comparison to 95.02% emergence in controls. Dose-dependent effects of β-sitosterol were observed as significantly decreased enzyme activities of alanine aminotransaminase (ALT), aspartate aminotransaminase (AST) and alkaline phosphatase (ALP) in the larval midgut. Suppression of enzyme activity was obtained in the order ALT>AST>ALP. Impaired activity of gut enzymes possibly lowered the energy reserves and affected nutrient transport through the gut epithelium, affecting the growth and development of H. armigera. Our study points to a promising use of β-sitosterol against H. armigera, although further examination and field studies are needed to ascertain its possible use in control programs.

Abstract

Extracellular enzymes produced from *Streptomyces* have the potential to replace toxic chemicals that are being used in various industries. The endorsement of this replacement has not received a better platform in developing countries. In this review, we have discussed the impact of chemicals and conventional practices on environmental health, and the role of extracellular enzymes to replace these practices. Burning of fossil fuels and agriculture residue is a global issue, but the production of biofuel using extracellular enzymes may be the single key to solve all these issues. We have discussed the replacement of hazardous chemicals with the use of xylanase, cellulase, and pectinase in food industries. In paper industries, delignification was done by the chemical treatment, but xylanase and laccase have the efficient

Abstract

Tetmemena saprai n. sp. was isolated from fresh-water samples collected from Okhla Bird Sanctuary, Delhi, India and described based on its morphology, morphogenesis and molecular markers, namely the small-subunit (SSU) rRNA gene and internal transcribed spacers (ITS1-5.8S-ITS2). The morphological features of *T. saprai* n. sp. are as follows:

Abstract

The biogenic tailoring of silver nanoparticles using plant extract is becoming an attractive approach in the current scenario. *Manilkara zapota* (MZ) is well known for its antibacterial, hepato-protective, anti-inflammatory, anti-tussive, anti-fungal, anti-tumour, and free radical scavenging potential. Its plants extract is a rich source of secondary metabolites. Nowadays, silver nanoparticles (AgNPs) have been advocated for a variety of biomedical applications. In present work, silver nanoparticles have been synthesized using an aqueous extract of MZ, physicochemically characterized and finally evaluated for antimicrobial effects, catalytic reduction/degradation of organic dyes and cytotoxicity. The nanosized AgNPs (~ 84 nm) were found to possess prominent antibacterial potential against gram positive and gram negative

The translational therapies to promote interaction between cell and signal come with stringent eligibility criteria. The chemically defined, hierarchically organized, and simpler yet blessed with robust intermolecular association, the peptides, are privileged to make the cut-off for sensing the cell-signal for biologics delivery and tissue engineering. The signature service and insoluble network formation of the peptide self-assemblies as hydrogels have drawn a spell of research activity among the scientists all around the globe in the past decades. The therapeutic peptide market players are anticipating promising growth opportunities due to the ample technological advancements in this field. The presence of the other organic moieties, enzyme substrates and well-established protecting groups like Fmoc and Boc etc., bring the best of both worlds. Since the large sequences of peptides severely limit the purification and their isolation, this article reviews the account of last 5

Magnetic Graphene Oxide nanocomposite prepared by the co-precipitation method based on concept of nanoarchitectonics. In co-precipitation method, Graphene oxide converts into Magnetic graphene oxide nanocomposite with uniform deposition of Fe_3O_4 nano particles on the surface of Graphene oxide. Field Emission Scanning Electron Microscopy spectroscopy technique reveals the size (~2.5 nm) and uniformity of Fe_3O_4 nano particles on Graphene oxide surface. The other properties characterized by Scanning electron microscopy, Raman spectroscopy, X-ray powder diffraction, X-ray photoelectron spectroscopy and vibrating-sample magnetometer. For Adsorption process, time, temperature, dose of adsorbent, initial concentration of dye solution and pH factors are optimize for Rhodamine 6G dye. Kinetic data expressed by Pseudo first order model and Pseudo second order model. Langmuir, Freundlich and Temkin isotherms used to evaluate the adsorption isotherm of Rhodamine 6G onto the surface of Magnetic graphene oxide nanocomposite and thermodynamic parameters tell us about the nature of reaction.

Journal of Chemical & Engineering Data

Abstract

The present study is focused on the synthesis of prominent magnetic graphene oxide/chitin nanocomposites, which behaves as an adsorbent for organic dyes under visible light. The nanocomposites were characterized using physicochemical techniques such as X-ray diffraction, Fourier transform infrared spectroscopy, Raman spectroscopy, vibrating-sample magnetometer, scanning electron microscopy, and transmission electron microscopy. A band gap energy of 2.01 eV was evaluated from Tauc and Davis−Mott plots. Batch adsorption studies were performed on crystal violet and methylene blue dyes with varying parameters such as time, pH, concentration, dosage, and temperature, which resulted to excellent adsorption activities of 403.78 mg/g for crystal violet and 332.61 mg/g for methylene blue. The as-synthesized nanocomposite showed excellent recovery capability, retaining its adsorption efficiency even after nine cycles of regeneration. The adsorption equilibrium data fitted well into the pseudo-second-order model and Langmuir isotherm model, while the spontaneity and exothermic nature of the adsorption phenomenon are demonstrated by thermodynamic studies. A comparative adsorption study results to a selective adsorption of cationic dyes over anionic ones, which goes in conformity with the high negative value of zeta potential obtained at

Abstract

In the context of nonlinear dynamics, interesting dynamic behavior of Gumowski-Mira Map has been noted under various feasible circumstances. Evolutionary phenomena are discussed through the study of bifurcation analysis leading to period-doubling and chaos. The appearance of chaos in the method is identified by plotting Lyapunov characteristic exponents (LCE) and Topological Entropy within certain parameter range. Dynamic Lyapunov Indicator (DLI) has been procured for further identification of regular and chaotic motions of the Gumowski-Mira Map. The numerical results through the indicator DLI clearly demonstrate the behavior of our map. The correlation dimension has been calculated numerically for the dimension of the chaotic attractor.

Abstract

The discrete autonomous LPA model of dynamical systems investigated for regular and chaotic evolutions under different feasible conditions in the framework of nonlinear dynamics. Evolutionary phenomena discussed through bifurcation analysis leading to chaos. As part of chaos measure, numerical calculations performed to obtain Lyapunov characteristic exponents (LCE), Topological Entropy, correlation dimension etc. The results obtained by numerical calculations are demonstrated through various graphics. Chaotic evolutions discussed at critical set of parameters, which reveals very significant results. Correlation dimension, which provides dimensionality of an attractor (Strange/Chaotic), obtained numerically by the use of certain statistical method.

Keywords: Autonomous LPA model, Bifurcation, Lyapunov Characteristic Exponents, Topological Entropy, Correlation Dimension.

1 Introduction

Mathematical models expressing real phenomena are mostly nonlinear in nature. Their evolutionary dynamical behavior often shows properties like unpredictability and chaos attracting researchers obtaining interesting results [4; 5; 24]. The model on population dynamics and ecology are frequently used models and most considerable problems in dynamical systems. Investigators generally prefer to use difference equation while describing mathematical models in context of biological models. Numerous articles have appeared on such models after publication of articles by R. May [17; 18] with reasonable assumption of evolution processes of population in concerned. Such studies generate quite interesting results.

Many nonlinear systems exhibit chaos in some parameter space but in some cases within the system because of the interaction among different agents, complexity character also visible during evolution. Unpredictable motion is thus a mix phenomenon of chaos and complexity. Presence of complexity is responsible of coexistence of multiple attractors, bistability, intermittency, cascading effects, exhibit of hysteresis properties, and some more properties. [3; 6; 9; 26]. Chaotic evolution measured by positivity of Lyapunov exponents, (LCEs), whereas its negative value signifies the system is regular. [2; 8; 13]. Complexity measured by increase of topological entropy; more increase in topological entropy signifies the system is more complex. [7; 14; 15; 21; 22; 27].

Evolution in insects considered metamorphosis since big changes observed during their growth and development. Insect evolution passes through four clearly different stages: egg, larvae, pupae and adult. Class of such insects listed as butterflies, moths, beetles, flies, bees, wasps, and ants. Changing from one stage to another an insect has to molt its skin and each time it emerge larger and of different form until it reaches the adult stage. [10]. Some

Supply Chain Model for Expiring Items Following Ramp-Type Demand With Stochastic Lead Time Under Crisp and Fuzzy Environment

Chaman Singh, S.R. Singh

Source Title: International Journal of Fuzzy System Applications (IJFSA) 9(1)

Abstract

Supply chain models with deteriorating items, season pattern demand, expiration and uncertain lead time, though common in practice; had received little attention from researchers. In this article, the authors proposed a collaborative system with ramp type seasonal pattern demand rate for expiring items with supplier's random lead time under crisp and fuzzy environment considering the effect of inflation and time value of money. For the seasonal kind of items, demand rate follows the combination of increasing-steady-decreasing demand patterns. A supplier's lead time is a stochastic function of his managing cost; thus, the extra costs incurred on the retailer due to the uncertainty in lead time in terms of shortages costs and lost sales costs are owed by the supplier. Numerical examples are cited to illustrate the results and its significant features. Finally, to study the effect of change of parameters sensitivity analysis is presented and necessary observations are made.

1. Introduction

In the existing literature, most of the inventory/supply chain model was developed considering three types of demand rates: (i) constant demand rate; (ii) linearly positive/negative demand rate; and (iii) exponentially increasing/decreasing demand rate. However, demand for a commodity cannot increase/decrease continuously over time. It is observed that demand for seasonal products like fruits and the fashionable products over the entire time horizon is three folded. At the beginning of the season demand increases more rapidly, as the time passes, it becomes steady in the middle of the season and decreases more rapidly towards the end of the season and becomes asymptotic. The term "ramp type" is used to represent such kind of demand pattern. In the existing inventory and supply chain models, after the development of classical economic ordering quantity model by Wilson (1934) under the assumption of constant demand rate, researchers extensively studied several aspects of inventory and supply chain modeling by assuming time-dependent demand rate. The assumption of constant demand rate is usually valid in the mature stage of a product's life cycle. In the growth and/or end-stage life cycle, demand rate may well be approximated by a time-dependent function. Resh et al. (1976) were the first who developed a model with linearly time-varying demand. Hill (1995) first resolved the indiscipline of time-dependent demand pattern by considering the demand

Abstract

Peroxiredoxin 6 (Prdx6) is a ubiquitously expressed 1-cysteine Peroxiredoxin found throughout all phyla. In mammals, under different physiological conditions, it has evolved from a peroxidase to a multifunctional enzyme. Among the mammalian Prdx6's, human and rat Prdx6's are the most extensively studied. Our study revealed that human and rat Prdx6's exhibit differences in their peroxidase activity. These two Prdx6's have only 8% difference in their primary sequence (with 19 amino acids) with no apparent

Abstract

The rapid rise in the emergence of multidrug-resistant (MDR) and extensively drug-resistant (XDR) strains of *Mycobacterium tuberculosis* (Mtb) mandates the discovery of novel tuberculosis (TB) drugs. Mur enzymes, which are identified as essential proteins in Mtb and catalyze the cytoplasmic steps in the peptidoglycan biosynthetic pathway, are considered potential drug targets. However, none of the clinical drugs have yet been developed against these enzymes. Hence, the aim of this study was to identify novel inhibitors of Mur enzymes in *Mycobacterium tuberculosis*. We screened an antitubercular compound library of 684 compounds, using MurB and MurE enzymes of the Mtb Mur pathway as drug targets. For experimental validation, the top hits obtained on in silico screening were screened in vitro, using Mtb Mur enzyme-specific assays. In all, seven compounds were found to show greater than 50% inhibition, with the highest inhibition observed at 77%, and the IC_{50} for these compounds was found to be in the range of 28–50 µM. Compound 5175112 showed the lowest IC_{50} (28.69 ± 1.17 µM), and on the basis of (1) the binding affinity, (2) the stability of interaction noted on

Highlights

- A mycobacteriophage PDRPxv was isolated from soil sample using *Mycobacterium smegmatis* as host.
- Mycobacteriophage PDRPxv belongs to the *Siphoviridae* family.
- The complete genome sequence of mycobacteriophage PDRPxv was determined.

Functional characterization of the endolysins derived from mycobacteriophage PDRPxv

Kandasamy Eniyan, Avni Sinha, Shazeb Ahmad & Urmi Bajpai

World Journal of Microbiology and Biotechnology **36**, Article number: 83 (2020) | Cite this article

588 Accesses | 4 Citations | 3 Altmetric | Metrics

Abstract

Bacteriophage-derived endolysin enzymes play a critical role in disintegration of the host bacterial cell wall and hence have gained considerable attention as possible therapeutics for the treatment of drug-resistant infections. Endolysins can target both dividing and non-dividing cells and given the vital role peptidoglycan plays in bacterial survival, bacteria are less likely to modify it even if continuously exposed to lysins. Hence, probability of bacteria developing resistance to lysins appear bleak. Endolysins from mycobacteriophages offer great potential as alternative therapeutics for the drug-resistant TB. However, considering that a large number of mycobacteriophages have been discovered so far, the information on endolysins come from only a few mycobacteriophages. In this study, we report the structural

Abstract

This paper deals with the problem of estimating scale parameter of the selected uniform population when sample sizes are unequal. The loss has been measured by the generalized Stein loss (GSL) function. The uniformly minimum risk unbiased (UMRU) estimator is derived, and the natural estimators are also constructed under the GSL function. One of the natural estimators is proved to be the generalized Bayes estimator with respect to a noninformative prior. For $k = 2$, we obtained a sufficient condition for an inadmissibility result and demonstrate that the natural estimator and UMRU estimator are inadmissible. A simulation investigation is also carried out for the performance of the risk functions of various competing estimators. Finally, this article represents a conclusion of our study.

Abstract - Path planning techniques of mobile robot (Automated Vehicle) is discussed in this paper. Though different researchers had proposed different path planning strategies, each plan has its own advantages and disadvantages. The goal of the research work is to develop an algorithm to find out an optimal path from source to destination along with the obstacles. The path planning algorithm not only minimizes the risk of collision but also reduces the planning time and creates a reliable path to reach the desired destination avoiding obstacles. The proposed algorithm is implemented to get the reliable path and compared with that of the existing algorithm to find the optimized path. The new approach is able to minimize the risk of collisions and travelling time with the help of different parameters and simulation software. It is proved through experimental results that the performance of the proposed algorithm is improves considerably and works efficiently when the shape and size of the image changes. It also turns closely at the corners of the obstacles and also reduces the number of steps without affecting the steps and corners. Time and space complexity analysis for this algorithm is experimentally tested and implemented.

Keywords: NFT, Path planning, Time Complexity, Space Complexity, DDA Optimization, Adj*.

(Received October 28th, 2020 / Accepted November 15th, 2020)

1. INTRODUCTION

Path planning of a mobile robot is to determine a collision-free path from a starting point to a goal point optimizing a performance criterion such as distance, time or energy (distance being the most commonly adopted criterion). Based on the availability of information about environment, there are two categories of path planning algorithms, namely off-line and on-line. Path planning of robots in environments where complete information about static obstacles and trajectory of moving obstacles are known in evolutionary approaches of path planning of mobile robots are discussed. Review shows that optimization algorithms are computationally more efficient and hence are increasingly used in tandem with classic approaches [5].

The path planning algorithm contains various methods with different optimization techniques for optimization. The path planning algorithm developed for various platforms depends on the condition whether it is static or dynamic. Mobile robots are expected to work in many places such as factories, offices and so on. Nowadays, autonomous mobile robots are used in the

Abstract

The excessive utilisation of conventional energy sources has highlighted a complicated energy crisis due to high dependency and depletion of non-renewable resources; along with the inefficiency to cope up with the pressing requirements of the economy. Shifting to alternative, replenishable forms of energy and developing technology for the same, will fulfil the current energy needs and complement the national security. Solar energy can be productively exercised to meet the current energy requirements. Shading analysis is one of the most critical steps essential to any successful installation of a solar energy system. In photovoltaics, it is important to analyze shading caused by surrounding objects and/or vegetation. In special cases like analysis

ABSTRACT

Nerve agents are often used at the military warfront, where diesel is a very common interferant. In the present work, a group of surface acoustic wave (SAW) sensors, called E-Nose with dissimilar sensing layers is developed for the recognition of the mixture of diesel and dimethyl methylphosphonate (DMMP) vapors. The exposure of DMMP and diesel vapors is kept at ppb and ppm levels respectively. Varied response patterns of DMMP and diesel vapors were obtained by SAW E-nose. Principal component analysis (PCA) has been used to extract features from the response curves of SAW sensors. Artificial Neural Network pattern recognition has been implemented to identify the precise detection of DMMP vapors in the binary mixture of DMMP and diesel. The effect of pre-processing (using PCA) the raw data before feeding it to artificial neural network is also studied.

Keywords: E-nose; Metal oxide; Sensor

1. INTRODUCTION

Today chemical attack is one of the biggest threats for us. Nerve agents (Sarin, Soman) are the deadliest and widely used class of chemical warfare agents, employed several times during a war[1]. Sensors employed for their detection must take care of the interferants also. Since the accuracy level required in the detection of warfare agents is very high, special technologies are required to minimize the possibility of false alarms. Nerve agents are mostly used at warfronts, where diesel is the major source of interferant. Diesel is used in tanks, trucks, generators, starting compressors for jet engines[2]. Therefore, sensor systems should be capable of detecting nerve agents in the presence of such interferants.

Presently, there exist various sensing techniques like IR deposition, lack of long-term stability, metal oxide sensing layers have also been tried[5-10].

The use of a single sensor is generally not sufficient to detect a particular vapour in a mixture. Hence an E-nose (an array of sensors) is essentially required. The sensing data of E-nose along with suitable pattern recognition technique (PCA, ANN etc.) allows correct recognition of target vapours[11]. In literature, SAW E-nose has been employed for the recognition of various target vapours[12-15]. Joo[13], *et al.* fabricated an array of polymer- coated SAW sensors for the recognition of simulant vapours but individual vapours were tested and the neural network algorithm was not implemented for precise prediction. Matatagui[9], *et al.* implemented Principal Component Analysis and neural network on the SAW response of few simulants,

Abstract

In this research article, the photocatalytic decolourization of rhodamin B by the newly green synthesized TiO_2 nanostructure material has been investigated to consider as effective catalyst for the decontamination of wastewater. The crystal structure and particle size measurement of green synthesized TiO_2 was appraised by X-ray diffraction (XRD). The morphological, structure and particle size distribution was study by SEM and

Abstract

Among various mosquito-borne diseases, dengue is one of the most prevalent and quickly spreading diseases primarily transmitted by *Aedes aegypti* and *Aedes albopictus*. This review discusses the dengue epidemics in Asian countries with a focus on India and recognizes various climatic, socio-economic, and demographic factors and their complex interaction, involved in dengue expansion. The impact of climatic factors, such as temperature, moisture, and precipitation has been elucidated on the mosquito breeding and disease outbreaks; demonstrating a linear correlation of ambient temperature and humidity with dengue transmission, in contrast with the uncertain association of rainfall. Multifarious empirical models have been developed for estimating the climatic effects on dengue and are used as a baseline to assess the impact on future infections. However, the spatiotemporal distribution of dengue cases can only be predicted best using dynamic modelling

COMPARATIVE LARVICIDAL EFFICACY OF α-CYPERMETHRIN ALONE AND α-CYPERMETHRIN/*CITRUS SINENSIS* PEEL EXTRACT BINARY MIXTURES AGAINST *AEDES AEGYPTI* L.

DEVINA AGGARWAL, ROOPA RANI SAMAL, SARITA KUMAR*

Aedes aegypti is a widely spread disease vector of great concern throughout the world. With continuous rise in cases of Zika, dengue and Chikungunya worldwide, control of *Ae. aegypti* has become a prime concern. The present study investigated the larvicidal effects of individual and various combinations of *Citrus sinensis* hexane peel extract and a synthetic pyrethroid, alpha-cypermethrin against *Ae. aegypti*. Larvicidal bioassays were performed using WHO protocol with minor modifications. The investigated compounds were found effective individually as well in binary mixtures indicating the efficient synergism. Hexane extract of *Citrus sinensis* peels assayed against *Aedes aegypti* larvae resulted in LC_{50} of 46.53 ppm after exposure for 24 h, while alpha-cypermethrin treatment resulted in LC_{50} value of 0.0063 ppm. The binary mixtures of both the compounds in 1:1, 1:5 and 1:10 ratios also showed significant larvicidal potential. The 1:1 mixture was found most effective with co-toxicity coefficient and synergistic factor as 23.456 and 3.865, respectively, for the LC_{50} at 24h. The binary mixtures showed synergism as well as additive effects in all the ratios tested except 1:5 ratio for LC_{90} at 48h which showed inconsequential antagonistic effect. Results showed decreased synergistic effects with increase in the citrus extract proportion in the binary mixtures. We suggest that phytoextract/cypermethrin mixtures can be more operative than insecticide/phytoextract alone, and can be used as a good ecofriendly approach in vector control programs. Such mixtures could reduce the costs, reduce insecticide dose, and regulate insecticide resistance as part of integrated vector management.

Keywords: *Citrus sinensis*, *Aedes aegypti*, synergism, additive, antagonism, binary mixtures.

INTRODUCTION

Mosquito-borne diseases are the major cause of concern worldwide, especially in tropical countries. Different mosquito vectors, *Aedes*, *Culex* and *Anopheles* transmit a range of disease pathogens causing dengue, Chikungunya, malaria, filariasis and Zika, etc. Though, different species of mosquitoes are playing havoc at global level, yet since last decade, outbreak of *Aedes*-borne diseases has taken a

Abstract

Helicoverpa armigera is one of the most devastating, cosmopolitan, polyphagous and multivoltine pests of agricultural crops. The growing side-effects of synthetic insecticides used to control agricultural pests, have amplified demand for the relatively safe and biodegradable compounds which offer benefits over synthetic chemical insecticides. Hence, the current study investigates the effects of Nerium oleander methanol leaf

Abstract

Consortia of *Streptomyces* spp. (colonies 169, 194, 165 and 130) used in this study are an efficient producer of secondary metabolites like chitinases and antifungal compounds, which may help in the protection of surplus food from spoilage. Qualitative screening for chitinase production and taxonomy of these colonies were undertaken in our previous studies. In the current study, GC–MS analysis of extract produced from the consortia of *Streptomyces* strains was done for the identification of antifungal compounds. Treatment of surplus food with activated consortia of *Streptomyces* spp. has protected powdered food for a month, whereas fresh food (unpowdered) was preserved for two days. A control sample of surplus food (untreated) was kept to check the contamination, which resulted in the growth of three fungi

Abstract

Emergence of MDR 'superbugs' inflamed a severe sense of urgency amongst scientists aiming at the discovery of novel potential drug molecules. Bacteria of the genus *Streptomyces* are really worth investigating for their immense potential to produce natural compounds of pharmaceutical importance. In the present study, the genome of *Streptomyces* sp. strain 196 was sequenced, studied and secondary metabolite biosynthetic gene clusters (smBGCs) were detected. FAME analysis was used for taxonomic validation of strain 196. Genome of strain 196 was sequenced using the Illumina NextSeq system which has resulted in a draft genome of 7.4 Mb. Rapid annotation using subsystem technology (RAST) results revealed the presence of

Abstract

Soil quality is the competence of soil to perform necessary functions that are able to maintain animal and plant productivity of the soil. Soil consists of various physical, chemical, and biological parameters, and all these parameters are involved in the critical functioning of soil. There is a need for continuous assessment of soil quality as soil is a complex and dynamic constituent of Earth's biosphere that is continuously changing by natural and anthropogenic disturbances. Any perturbations in the soil cause disturbances in the physical (soil texture, bulk density, etc.), chemical (pH, salinity, organic carbon, etc.), and biological (microbes and enzymes) parameters. These physical, chemical, and biological parameters can serve as indicators for soil quality assessment. However, soil quality assessment cannot be possible by

Abstract

An ibuprofen based molecular receptor **R1** (N-[2-[(2-Hydroxy-benzylidene)-amino]-ethyl]-2-(4-isobutyl-phenyl)-propionamide) was developed for the detection of Cu^{2+} ion in aqueous medium by absorbance and fluorescence techniques. Binding constants ($4.89–5.67 \times 10^3\ M^{-1}$) and detection limits (1.71–2.12 μM) showed significant sensing ability. SEM and PXRD techniques were employed to establish the complex formation between **R1** and Cu^{2+} ion and also showed promising behaviour of nanomaterial. The

SUBJECTS: Catalysts, Catalytic reactions, Ethanol, Inorganic compounds, Reaction products

Abstract

This work is mainly focused on the synthesis of an efficient and reusable heterogeneous Au/NiAlTi layered double hydroxide (LDH) nanocatalyst and its applications in the preparation of biologically important xanthene, 1,4-dihydropyridine, polyhydroquinoline, and 4*H*-pyran derivatives. NiAlTi LDH was designed hydrothermally and then gold was supported over the surface of LDH by using ion-exchange and $NaBH_4$ reduction methods. The synthesized nanocatalyst was physicochemically characterized by X-ray diffractrometry, Fourier-transform infrared spectroscopy, thermogravimetric analysis, scanning electron microscopy, and transmission electron microscopy (TEM). The TEM images confirmed the support of gold nanoparticles over the surface of LDH with a size distribution of 7−9 nm. The well-characterized nanocatalyst was tested for the synthesis of biologically important xanthene, 1,4-dihydropyridine, polyhydroquinoline, and 4*H*-pyran derivatives. The advantages obtained were excellent yields in a lesser reaction time. Stability and reusability were also accessed; the catalyst was stable even after five cycles. High catalytic efficiency, easy fabrication, and recycling ability of Au/NiAlTi LDH make it a potential catalyst for the synthesis of xanthene, 1,4-dihydropyridine, polyhydroquinoline, and 4*H*-pyran derivatives.

Abstract

This article discusses the potential applications of natural polysaccharide-based graphene oxide nanomaterials in the field of wastewater remediation through the removal of organic and synthetic dyes. Being highly toxic, carcinogenic, and nonbiodegradable, dyes disposed from textile, paper, and printing industries etc. pose a serious threat to various life forms on earth. Recently, there has been an increased interest in the amalgamation of biopolymers, such as polysaccharides, with the high adsorption efficiency of graphene oxide. Polysaccharides, apart from being nontoxic, low cost, and eco-friendly, possess a variety of functional groups enabling them to be easily tuned for the desired applications. When grafted with GO nanosheets, they give rise to unique nanomaterials possessing diverse applications, especially in the eradication of harmful contaminants from wastewater. This review is an attempt to give consolidated and detailed information on different aspects of the adsorption behavior of various potentially low-cost polysaccharide-based GO nanoadsorbents toward lethal dyes. The characterization techniques used, adsorption isotherms, kinetics, thermodynamic behavior, recyclability, and swelling properties as well as the adsorption mechanism have been outlined in this article. The whole anthology of literature reports excellent dye removal efficiency with significant regeneration performance making these nanoadsorbents promising candidates for practical

Abstract

The synthesis of hitherto unknown 5′-deoxy-5′-(4-substituted-1,2,3-triazol-1-yl)-uridine and its evaluation, through an one-pot screening assay, against MurA-F enzymes involved in *Mycobacterium tuberculosis* (Mtb), are described. Starting from UDP-*N*-acetylmuramic acid (UDP-MurNAc), the natural substrate involved in the peptidoglycan biosynthesis, our strategy was to substitute the diphosphate group of UDP-MurNAc by a 1,2,3-triazolo spacer under copper-catalyzed azide-alkyne cycloaddition conditions. The structure-activity relationship was discussed and among the 23 novel compounds developed, *N*-acetylglucosamine analogues **11c** and **11e** emerged as the best inhibitors against the Mtb MurA-F enzymes reconstruction pathway with an inhibitory effect of 56% and 50%, respectively, at 100 µM. Both compounds are selective inhibitors of Mtb MurE, the molecular docking and molecular dynamic simulation suggesting that **11c** and **11e** are occupying the active site of Mtb MurE ligase.

Keywords: Mur ligase; nucleoside analogues; copper-catalyzed azide-alkyne cycloaddition; antibacterial

NEEM FLOWERS (*AZADIRACHTA INDICA*) AS AN ABUNDANT SOURCE OF NECTAR FOR BUTTERFLIES IN AN URBAN LANDSCAPE IN DELHI, INDIA

Reviewer: Peter Smetacek

Abstract

Most butterflies feed on floral nectar. The ability of butterflies to access nectar deep within a flower depends on the length of their proboscis. Adequate nutrition is known to maintain the reproductive potential of butterflies. In an urban context, lacking adequate parks and gardens, there is always a need of flowers that can provide nectar to butterflies. In this situation, avenue trees, bearing flowers with nectar accessible to a wide range of butterflies, could help maintain a reasonably diverse butterfly population. The Neem tree, *Azadirachta indica*, is planted along roads and in parks in urban areas of Delhi. Its small flowers were found to attract several species of butterflies belonging to all five major families present in Delhi. It is suggested that trees such as *Azadirachta indica* and other nectar trees, if planted as avenue trees, may help in the conservation of butterflies in an urban landscape.

Key words: Flowering tree, Food plant, Butterfly, Urban Landscape

Introduction

Butterflies are liquid-feeding insects; they acquire food by sucking through their long tubular proboscis (Krenn, 2010). Adult butterflies can be broadly categorised into two feeding guilds: nectar feeding (feeding on floral nectar) and non-nectar feeding (acquiring nutrition from decaying fruit, sap, honey dew, etc.). The feeding habits are associated with certain modifications in the microstructure of the proboscis, particularly at the tip (Krenn *et al*., 2001, Molleman *et al*., 2005; Krenn, 2010; Lehnert, *et al*., 2016). A vast majority of butterflies feed on floral nectar (Krenn, 2010). The profitability of feeding on floral nectar depends in part on the depth of the corolla-tube (or the depth at which nectar is seated in flowers); the amount of nectar, proboscis length and wing load (Corbet, 2000; Tiple *et al*., 2009). The shorter proboscis of small butterflies limits them from using flowers with deep seated nectar (May, 1992). Butterflies with a longer proboscis however, can harvest nectar from a broad range of flowers, including flowers with short as well as those with long corolla tubes (May, 1992; Corbet, 2000; Kunte, 2007; Sultana *et al*., 2017). Nutrition is known to maintain high fecundity in female butterflies and increase their body weight and fat storage (Hill *et al*., 1989; O'Brien *et al*., 2004; Mevi-Schutz *et al*., 2005; Geister *et al*., 2008; Karlsson *et al*., 2009). Butterflies obtain nectar from a range of flowers. The role of tree flowers as a source of nectar has not been appreciated by many researchers. Tree flowers however, can be an important source of nectar for butterflies living in or close to forested as well as urban landscapes. Here, I present an account of butterfly species which can benefit from feeding on the flowers of *Azadirachta indica* (A. Juss; Family: Meliaceae) commonly known as 'Neem tree'. The tree commonly grows in urban and rural areas in most parts of India and a few researchers have indicated

A COMPREHENSIVE CHECKLIST OF BUTTERFLIES SEEN IN CORBETT TIGER RESERVE, UTTARAKHAND, INDIA

Abstract

Corbett Tiger Reserve (CTR) conserves a wealth of flora and fauna and is a known destination for ecotourism in Northern India. Besides mammals and birds, for which CTR is known to many, frequent visits to CTR and its vicinity for watching butterflies are also on the rise in recent times. In this respect, an account of species of butterflies in the CTR and its vicinity would be useful not only for butterfly ecotourism but also for conservational, educational and scientific purposes. By virtue of photographic documentation of species of butterflies in CTR for over a decade, we provide here a list of butterflies seen in various tourist zones of CTR and its immediate vicinity. We recorded 94 genera and 130 species belonging to six families. On the basis of our records and work by others in CTR, a comprehensive checklist of 143 species of butterflies has been compiled.

Introduction

Corbett Tiger Reserve (CTR) is one of the key biodiversity areas in the foothills of Himalaya in Northern India. Established as a wildlife sanctuary with a total area of few hundred square kilometres in 1934, it was upgraded to a National Park in 1936 (Khanna *et al*., 2008). Presently, the CTR has a well-protected expanse of 1288.31 km² (NTCA, 2009). The spread of CTR encompasses a variety of habitats that support diverse flora and fauna (Pant, 1986, Editor-Director, 2008, Khan *et al*., 2008). Besides conserving wilderness, the location and approachability of CTR; and plentiful wildlife attracts lakhs of tourists every year (Badola *et al*., 2010; Gusain, 2015). The recreational value of CTR generates livelihood for the local community (Badola *et al*. 2010; Kumar *et al*., 2019).

Today, butterfly watching is one of the favourite recreational activities for many, and the trend is gradually on the rise. This makes butterflies important from the perspective of ecotourism; defined here as "low impact nature tourism which contributes to the maintenance of species and habitats either directly through a contribution to conservation and/or indirectly by providing revenue to the local community sufficient for local people to value, and therefore protect, their wildlife heritage area as a source of income" (Fennel, 2015; Kumianto *et al*., 2016; Singh *et al*., 2016). The diverse and pristine habitat of CTR is expected to be rich in the diversity of butterflies. However, literature on butterfly diversity in and around CTR is sparse. Only two reports provide an account of species of butterflies found in CTR (Kumar, 2008; Arya *et al*., 2020). The number of species of butterflies mentioned in these reports are 36 (Kumar, 2008), and 56 (Arya *et al*., 2020). The present communication reports 130 species of butterflies based on the observations made

OVIPOSITION BY *JAMIDES BOCHUS* (STOLL, [1782]) (INSECTA: LEPIDOPTERA: LYCAENIDAE) IN NEW DELHI, INDIA

RAJESH CHAUDHARY[1] & VINESH KUMAR[2]

*[1 & 2]Department of Biomedical Science, Acharya Narendra Dev College (University of Delhi), Govindpuri, Kalkaji, New Delhi-110 019. *Corresponding Author- email: rajeshchaudhary@andc.du.ac.in*

Reviewer: Peter Smetacek

Several individuals of the Dark Cerulean (*Jamides bochus*) were sighted 3-4 times daily between 30. viii.2020 to 20.ix.2020, fluttering over the crown of *Millettia pinnata* (L.) Panigrahi (Fabaceae). On two occasions, more than two individuals were sighted at a time. On 22.ix.2020, a female *J. bochus* was observed laying eggs on nascent buds and leaves of *M. pinnata*, in the Rohini area of New Delhi. It was observed for 5 minutes from a distance of 2.5-3 m and the events were photographed (Figures 1). The butterfly returned twice to the same spot to lay eggs after fluttering for about 1 minute in the vicinity of the twig, where it had laid the first batch of eggs.

M. pinnata is a medium sized tree planted commonly alongside many roads in Delhi. Sightings of *Jamides bochus* in Delhi are rare. However, during the past few years it has been sighted several times. It was so far not known to breed in Delhi (Chaudhary *et. al.*, 2019, Dr. Surya Prakash, *pers. comm.*). The present observation provides supporting evidence towards the assertion by Chaudhary & Kumar (2019) that the records of the *J. bochus* in Delhi are of a breeding population rather than of migrants.

Abstract

Prevalence of diabetes is increasing rapidly due to change in lifestyle and modernization. Other than genetic and lifestyle factors, research has been concentrated in recognizing the effect of in utero conditions and mechanisms of epigenetics in developing diabetes. It emphasizes the need of discovering new methods of prevention focusing on child and maternal health. The Diabetes prevalence is more in developing nations than developed nations. In modern era with the globalization diabetes is a major reason of medical care expenditure and mortality and it is one of the biggest health challenges of current and

Abstract

The circular case of Sitnikov problem is studied here when the infinitesimal body varies its mass according to Jeans law and it is moving along the z-axis which is perpendicular to the orbital plane of the two equal spherical primaries. The two primaries are moving in $xy-$plane on the same circular path. These two primaries are imposing the Newtonian forces on the third variable mass body but not influenced by it. Stability of equilibrium points is examined followed by the derived equations of motion. The time-series solutions of the equation of motion are performed by using the Lindstedt-Poincaré method which is used to remove the secular term. We have numerically performed the time-series which shows that variation parameters have great impact on it.

Abstract

The elliptic case of restricted four-body problem with variable mass of infinitesimal body is studied here. The three primary bodies which are placed at the vertices of an equilateral triangle and moving in the elliptical orbits around their common center of mass. Out of these primaries we have considered that one massive body is having radiating effect and other two bodies are oblate in shapes. The fourth body which have infinitesimal mass, are varying its mass according to Jeans law. We derive the equations of motion of the infinitesimal body under the generalized sense in the elliptic restricted four-body problem by using the Meshcherskii-space time transformations. Further we numerically study about the equilibrium points, Poincaré surfaces of section, regions of possible motion and basins of the

Abstract

The aim of the study is to investigate the effect of variation parameters due to variable mass of the planetoid in the elliptical Sitnikov problem. Where both primaries are moving in elliptical orbits and imposing the gravitational forces on the third infinitesimal body which varies its mass according to Jeans law and it does not affect the motion of the primaries. Planetoid is moving along perpendicular line (z-axis) to the orbital plane of the primaries. We derive the equation of motion of the planetoid followed by the hamiltonian of the system. Then we solve the equation of motion of the Hill's type equation. And again the time-series solution to the equation with nonlinear force is determined using first the Courant and Snyder transformation followed by the Lindstedt–Poincaré perturbation method which is used to remove the secular term and then an application of Courant and Snyder transformation is used. We have numerically performed the time-series which shows that variation parameters have great impact on it. We also compare our results with the existing results and found significant role of the variation parameters used.

Keywords: Elliptical Sitnikov problem, Variable mass, Jeans law, Courant and Snyder transformation.

1 Introduction

Sitnikov configuration is an interesting problem which starts over decades by K. A. Sitnikov in 1960. This configuration of restricted problem has primaries which are moving either in elliptic or circular path in the same plane while third body is moving on the vertical straight line of the plane of the motion of the primaries. These

Abstract

From the past few decades, most of the researchers concentrate on recycling of consumer goods to reduce the impact on environment and health, but now it is time to change our basic approach. In this research paper, we elaborate a nascent issue of product stewardship. Economic production model (EPQ) is a production model in which production occur in a time cycle to fulfill the demand. The proposed model we consider a basic EPQ model with all basic

ABSTRACT

Background/Objectives: To trim down the recycling cost of any manufactured goods with the help of green design and product stewardship. **Methods/Statistical analysis:** For the planned EPQ (economic production quantity model) model, all costs are calculated to find total cost and this total cost is optimized with the help of the Hessian matrix. Sensitivity analysis is also carried w.r.t. different parameters, to illustrate the impact of these parameters on the proposed model. The convexity of the total cost function is also checked with the help of mathematical software Mathematica 9.0. **Findings:** Major finding of the proposed model are as follows: (i) Increase in the number of recycles results in the reduction of the total cost. (ii) Product stewardship parameter has a negative effect on total cost as the PS increases from 1 to 4 units, total cost decreases from 5926.00 to 5918.96 units (see Table 9) (similar findings can be written for numeric example 1 after correcting it). (iii) Green design costs have a positive effect on total cost, as the green design cost

Abstract

The existence and stability of stationary points are investigated under the effects of heterogeneous primary having N-layers with different densities, radiating finite straight segment and the Coriolis as well as centrifugal forces in the frame of cr3bp. The equations of motion are determined with the help of which we evaluate five stationary points analytically as well as graphically, and examine their stability.

Abstract

COVID-19 is an infectious respiratory disease caused by SARS-CoV-2, a new beta coronavirus that emerged in Wuhan, China. Being primarily a respiratory disease, it is highly transmissible through both direct and indirect contacts. It displays a range of symptoms in different individuals and thus has been grouped into mild, moderate, and severe diseases. The virus utilizes spike proteins present on its surface to recognize ACE-2 receptors present on the host cells to enter the cell cytoplasm and replicate. The viral invasion of cells induces damage response, pyroptosis, infiltration of immune cells, expression of pro-inflammatory cytokines (cytokine storm), and activation of the adaptive immune system. Depending on viral load and host factors like age and underlying medical conditions, the immune responses mounted against SARS-CoV-2 may cause acute respiratory distress syndrome (ARDS), multiple organ failure, and death. Abstract

Herein we report the development of easily separable, Fe_3O_4 loaded chitin nanomaterial (MCH NM) via simple Co-precipitation route, as a promising adsorbent for removal of Reactive Blue 13 (RB13) dye from aqueous solution in visible light ($\lambda \geq 420$nm). This nanomaterial was characterized using distinctive physicochemical techniques; MCH NM show band gap energy of 2.257eV, evaluated by Tauc's plot using UV–visible spectroscopy. MCH NM show excellent swelling property due to the tendency of the polymer chains to reach elongated configurations at equilibrium beyond which an elastic

Artificial Intelligence Assisted Smart Mirror

Amit Garg[1], Prince Sharma[2#], Vivek Verma[3], Shruti Yadav[4], Aman Tyagi[5]

[12345]Department of Electronics, Acharya Narendra Dev College, Govindpuri, New Delhi, India-110019

[#]Email address: princesharma2899@gmail.com

Abstract— According to a survey [1] and research carried out by Today Show and AOL [2], the average person spends 55-56 minutes every day in front of the mirror. In today's fast-moving world, there is a need to manage time very efficiently while being healthy and content in one's life. Considering these observations, this paper constitutes the demonstration and creation of a project aiming to utilize every minute spent in front of a mirror in things like keeping track of mental health and making the best use of smart emerging technologies. In the proposed project idea, this paper presents another interactive smart mirror with some technological capabilities like emotion tracking, voice-activated talking bot with personal assistance, face recognition, the door unlocks, controlling lights, fans, and much more. The proposed mirror also displays day to day schedule, reminders, meetings and engagements fetching all of the required information from the user's Google account and real-time information such as live weather updates, local time, and latest headlines. Moreover, it keeps on displaying positive messages, compliments one's outfit, and greetings depending on what time it is.

Keywords— Smart Mirror, Raspberry PI, Artificial Intelligence, node.js, Python, JavaScript, Two-way mirror

I. INTRODUCTION

It is said that every second count and the saying is considered to be among the best of letter and spirit. There is rarely a home on earth without a mirror. Normally, a majority of people spend almost half of an hour in front of a mirror on a daily basis. With the advancement in technology the mirror should also adapt to move towards many emerging technologies like smartphones, tablets and laptops. The proposed solution to the problem is to turn the mirror into a Smart Electronic device like Alexa, Google Assistant.

Taking advantage of AI technology it is embedded in it to make smart and usable in all technological aspects. The most important goals of the Smart Mirror are to save the user's time and consequently, help in being more productive and also to allow receive all the updates on a timely basis. A smart mirror also reduces the great haste of completing morning routines by

II. RELATED WORK

The proposed smart mirror facilitates access to personalized services such as assistance, emotion tracking, face recognized door unlocks, retrieval of important engagements and notifications from user's Google account, real-time weather updates, and news headlines. Even while functioning as an ordinary mirror, it complements the user's outfit and greets concerning the time.

Some of the previous works in this field are written briefly in this section.

1. A system [1] that lets users control the household smart appliances and provide access to personalized services; ensuring comfort in accessing these services without requiring any human intervention
2. Mirror [2] embedded with additional functionality to display personalized updates and news and provide personal assistance as well. This mirror seeks the user's

Abstract

In this work, chemically synthesized Zinc Oxide (ZnO) thin films were exposed to Cobalt-60 (Co-60), 1.25 MeV average energy of gamma source at different doses for possible augmentation in NH_3 sensing. The hexagonal crystalline structure was confirmed by XRD spectra and an enhancement in crystallite size was observed with an increase in radiation followed by decrease at 50 kGy dose. The FTIR spectra showed there were no significant changes in the peak position after gamma-irradiation. The morphological investigation showed the maturation of 1D ZnO hexagonal nanorods over the surface of the film. However, after gamma-irradiation, the ZnO nanorods were found connected, forming bunches. The band-gap increased for 50 kGy doses as compared to pristine ZnO thin film. However, characterization result analysis showed that gamma-irradiation produced conspicuous improvements in chemically prepared ZnO microstructure. It was

Highlights

- The crystallite size increases with increasing γ dose at 60 kGy as compared to pristine MWCNTs.
- Bandgap and structural parameters d, ε, δ and g decreases with increasing γ dose as compared to pristine MWCNTs.
- FTIR spectra peak shifted after γ irradiation is the evidence of changes in the structure of the MWCNTs.
- Raman spectra show the structural ordering at high dose (60 kGy) of MWCNTs.

ABSTRACT

Echinacea purpurea L. (EP) is one of the most important perennial medical herbs with enormous pharmacological and aesthetic properties. Mainly Echinacea is focused on its immunomodulatory effects, anti-inflammatory, antimicrobial, antiviral, antifungal and urinary tract infections. Other aspects of its beneficial effects viz. antioxidant, antibacterial, antiviral, and larvicidal activities antianxiety, antidepression, cytotoxicity, and antimutagenicity as induced by the plant have been revealed in various studies. The chemistry and its pharmacological actions are well documented. Several groups of

Abstract *Aedes aegypti* L. is the major vector accountable for the spread of several diseases of medical importance. The control strategies primarily relying on chemical insecticides have caused negative impact on our environment and human health. Thus, current study employed *Citrus limetta* peel extracts (CLPE) against larvae of *Ae. aegypti*. Silver nanocomposites (AgNCs) from CLPE were synthesised and the process of synthesis was optimized by varying temperature; volume and concentration of silver nitrate solution; and the volume of catalyst. A conspicuous change in colour of the reaction mixture was noticed from pale yellow to dark brown. This

diseases; like Yellow fever, Zika, Dengue fever and Chikungunya; has captivated attention of researchers, health organizations and vector control bodies. In the last few decades, the prevalence of *Aedes*-borne diseases; especially dengue; has augmented extensively at global level. According to World Health Organization, almost half of the world's population (3.9 billion) residing in 128 countries is prone to the dengue infection while more than 100 countries are endemic to dengue [1]. According to Union Health Ministry of India, the infections and fatalities caused by dengue virus are rising in India year by year raising serious concerns about the vector control.

pH induced conformational alteration in human peroxiredoxin 6 might be responsible for its resistance against lysosomal pH or high temperature

Scientific Reports **11**, Article number: 9657 (2021) | Cite this article

999 Accesses | **11** Citations | Metrics

Abstract

Peroxiredoxin 6 (Prdx6), the ubiquitously expressed enzyme belonging to the family of peroxidases, namely, peroxiredoxins, exhibits a unique feature of functional compartmentalization within cells. Whereas, the enzyme localized in cytosol shows glutathione peroxidase activity, its lysosomal counterpart performs calcium independent phospholipase A2 (aiPLA2) activity. Like any true moonlighting protein, these two activities of Prdx6 are mutually exclusive of each other as a function of the pH of the cellular compartments. Differential substrate preference at different pH (i.e. peroxidised phospholipids at neutral pH and reduced phospholipids at acidic pH) is considered to be the reason for this behavior. To gain insight into the pH-induced structural–functional interplay we have systematically evaluated

Exploiting Emojis in Sentiment Analysis: A Survey

Vandita Grover

Journal of The Institution of Engineers (India): Series B **103**, 259–272 (2022) | Cite this article

917 Accesses | **3** Citations | Metrics

Abstract

Sentiment analysis is now a prominent field of interest owing to a growing trend of users expressing their opinions on social media, review pages, feedback forms, and other online channels. The machine learning approach to sentiment analysis focuses on feature extraction methods like constructing lexicons to learn sentiment polarity or learning word embeddings and applying them for their use in machine learning algorithms for sentiment classification. But most popular machine learning approaches still cannot capture nuanced emotions like sarcasm, irony, etc. Emojis are now being used along with text by the users to express emotions and hence can help researchers improve sentiment classification tasks. Sentiment analysis powered by emojis is still in the nascent phase and has gained some pace in the last five years. The primary goal of this paper is to discuss the use of emojis that supplement the

ABSTRACT

The thickness of dielectric spacer layer (DSL) plays an important role in performance of plasmonic solar cells. In this work, effect of thickness variation of ITO (indium tin oxide) DSL in silver (Ag) nanospheres/ITO/crystalline silicon(c-Si) structure on forward and backward scattering efficiencies has been investigated. Simulations were carried out using the open-source software MEEP via FDTD method for Ag nanospheres of sizes 50nm, 80nm and 100nm. Maximum forward scattering was observed with 80nm

Abstract

In the present communication, for the first time, applicability of Field Plate (FP) for Double Channel (DC) AlGaN/GaNHEMT is demonstrated. Impact of design space parameters such as field plate length (L_{FP}) and Silicon Nitride thickness (t_{SiN}) on breakdown voltage of DC HEMT is investigated and benchmarked with Single Channel (SC) HEMT. The investigation is carried out using ATLAS Technological Computer Aided Design (TCAD) Simulation tool, which is an efficient method in terms of time and cost to analyze and understand DC HEMT prior to the fabrication. The simulation shows new findings that breakdown voltage of DC device exhibited a large deviation with that of SC device. The breakdown voltage deviation is well corroborated

Energy & Fuels

Abstract

In this paper, a thorough investigation of cadmium sulfide nanoparticle characteristics has been studied as a result of the wide attention and enormous application in a solar cell. Perovskite-sensitized solar cells (PSSCs) are a favorably effectual and sanitary hybrid, organic–inorganic solar cell device. The simple way uses synthesized cost-effective CdS quantum dots (QDs) via the sol–gel approach and also investigates their structural, electronic, and vibrational properties of CdS nanoparticles with the density functional theory method in B3LYP. Moreover, we use high-resolution transmission electron microscopy (HRTEM) techniques to confirm our calculations and acquire good agreement to the structural analysis of CdS QD formation. The maximum grain diameter is obtained from a HRTEM image, at ~4 nm. The particle size analyzer that obtained ~4 nm of CdS QD nanoparticles was determine via a dynamic light scattering study. The results demonstrated that the fabricated CdS QD-based dye-sensitized solar cell and PSSC represented a maximum power conversion efficiency (η) of 0.5 and 1.8% at 1 sun condition. This efficiency was improved by approximately 72%, associated with that of the reference cell.

Abstract

Aedes aegypti is of utmost public health concern transmitting various diseases of human health concern. Employment of chemical-based control interventions has induced immunity in mosquitoes, harmed environment, and adversely affected human health and non-targets diverting the research focus on alternate measures. Current study investigates the efficacy of an Insect Growth Regulator, lufenuron, against early fourth instars of *Ae. aegypti*. The larvae exposed to lufenuron for 24 h were assessed for the effects on the development and adult emergence. The impact of sub-lethal and median-lethal dose of lufenuron was determined on the nutrients and detoxification enzymes of *Ae. aegypti*. The larvae exposed to lufenuron

Abstract

Aedes aegypti is a globally spread disease vector of supreme concern, primarily controlled by chemical insecticides. Current study investigates the comparative rate of acetamiprid and deltamethrin resistance development in *Ae. aegypti* larvae and; possible correlation between resistance and cuticular thickening. The larvae were selected with LC_{90} level of the respective insecticide for 10 successive generations and the level of resistance induced was estimated. The larvae of parent (PS), acetamiprid-selected (ACSF-10) and deltamethrin-selected (DLSF-10) strains were sectioned through first abdominal segment to elucidate the variation in cuticular thickness. The PS larvae of *Ae. aegypti* were 229.26-fold higher susceptible to deltamethrin as compared to acetamiprid, exhibiting corresponding LC_{50} values of

Abstract

Aedes aegypti, is a well-known vector of dengue, Chikungunya and Zika at the global level. Primary use of pyrethroids as control interventions has caused the development of a considerable level of immunity in *Ae. aegypti*. The current study assessed the efficacy of a pyrethroid, ?-cypermethrin on the survival and various life parameters of *Ae. aegypti*. The larvicidal studies with ?-cypermethrin revealed the respective LC_{50} and LC_{90} values as 0.26526 mg/L and 0.60211 mg/L. The impact of LC_{50} level was assessed on the growth and life attributes; such as gonotrophic cycle, egg development, hatchability, development and survival of immature stages, adult longevity, reproduction rate and generation time: of fourth instar of susceptible (S) and ?-cypermethrin-exposed population (E). The exposed population showed diminished

Abstract

In current agriculture practices, various chemical stimulants are being used to enhance crop productivity. However, these chemical fertilizers and pesticides show a deadly impact on the environment, food chain, and human health. The researchers are looking for the biological replacement of these chemical fertilizers and pesticides. Nevertheless, still, no strong bioalternative has replaced the use of such chemicals. Bacteria belonging to the genus *Streptomyces* are well-known producers of secondary metabolites, which can be potentially utilized to replace chemical fertilizers and pesticides. Metabolites from *Streptomyces* can degrade the chemical pesticides, help in the recoupment of essential minerals (e.g., iron,

Exploring Small Heat Shock Proteins (sHSPs) for Targeting Drug Resistance in *Candida albicans* and other Pathogenic Fungi

Rahul Dev

Department of Zoology, Acharya Narendra Dev College, University of Delhi, Govindpuri, Kalkaji, New Delhi - 110 019, India.

Abstract

Fungal infections have predominantly increased worldwide that leads to morbidity and mortality in severe cases. Invasive candidiasis and other pathogenic fungal infections are a major problem in immunocompromised individuals and post-operative patients. Increasing resistance to existing antifungal drugs calls for the identification of novel antifungal drug targets for chemotherapeutic interventions. This demand for identification and characterization of novel drug targets leads to the development of effective antifungal therapy against drug resistant fungi. Heat shock proteins (HSPs) are important for various biological processes like protein folding, posttranslational modifications, transcription, translation, and protein aggregation. HSPs are involved in maintaining homeostasis of the cell. A subgroup of HSPs is small heat shock proteins (sHSPs), which functions as cellular chaperones. They are having a significant role in the many cellular functions like development, cytoskeletal organization, apoptosis, membrane lipid polymorphism, differentiation, autophagy, in infection recognition and are major players in various stresses like osmotic stress, pH stress, etc. Studies have shown that fungal cells express increased levels of sHSPs upon antifungal drug induced stress responses. Here we review the important role of small heat shock proteins (sHSPs) in fungal diseases and their potential as antifungal targets.

Abstract

Four species belonging to the genus *Euplotes* have been investigated, namely: *E. lynni* nov. spec., *E. indica* nov. spec., *E. aediculatus*, and *E. woodruffi*. All populations are from India and were investigated using morphological and molecular markers. The phylogenetic relationships were inferred from small subunit ribosomal rRNA gene (SSU rRNA), internal transcribed spacer (ITS) region, and mitochondrial cytochrome c oxidase subunit I (COI) gene. Predicted secondary structure models for two new species using the hypervariable region of the SSU rRNA gene and ITS2 region support the distinctness of both species. Morphological characters were subjected to principal component analysis (PCA) and genetic variations were studied in-depth to analyze the relatedness of the two new species with their congeners. An integrative approach combining morphological features, molecular analysis, and ecological characteristics was carried out to understand the phylogenetic position of the reported species within the different clades of the genus *Euplotes*.

Abstract

Researchers nowadays are relentlessly on a race exploring sustainable materials and techniques for the sequestration of toxic dyes and metal ions from water bodies. Biopolymers such as guar gum, owing to its high abundance, low cost and non-toxicity, are potential candidates in this field. Plenty of hydroxyl groups in the polymer backbone enable guar gum to be functionalised or grafted in a versatile manner proving itself as an excellent starting substance for fabricating upgraded materials meant for diverse applications. This review offers a comprehensive coverage of the role of guar gum-based nanocomposites in removal of dyes and heavy metal ions from waste water through adsorption and photo-catalytic degradation. Isotherm and kinetics models, fabrication routes, characterisation techniques, swelling properties and reusability as well as adsorption and degradation mechanisms are outlined. A detailed analysis with convincing results suggests a good future perspective of implementation of these materials in real-time wastewater treatment technology.

Recent Advances in a Polydopamine-Mediated Antimicrobial Adhesion System

 Indu Singh[1]  Gagan Dhawan[1*] Seema Gupta[1*] Pradeep Kumar[2*]

[1] Acharya Narendra Dev College, University of Delhi, Delhi, India
[2] Nucleic Acids Research Laboratory, CSIR-Institute of Genomics and Integrative Biology, Delhi, India

The drug resistance developed by bacteria during antibiotic treatment has been a call to action for researchers and scientists across the globe, as bacteria and fungi develop ever increasing resistance to current drugs. Innovative antimicrobial/antibacterial materials and coatings to combat such infections have become a priority, as many infections are caused by indwelling implants (e.g., catheters) as well as improving postsurgical function and outcomes. Pathogenic microorganisms that can exist either in planktonic form or as biofilms in water-carrying pipelines are one of the sources

Abstract

Synthesis of metallic nanoparticles via green approach holds great potential in diverse fields of biotechnology and medicine with special mention to silver nanoparticles (AgNPs) which undoubtedly display antimicrobial, radical scavenging, and dye degradation properties. Currently, there is a need to explore more cost-effective and efficient methods to synthesize AgNPs. In this study, we have synthesized biogenic AgNPs using an aqueous extract of a flowering plant of the legume family, Fabaceae, subfamily Caesalpiniaceae, *Cassia fistula*, which is also well known for its medicinal values. Spectroscopically and physicochemically characterized AgNPs were evaluated for their cytocompatibility, antimicrobial effects, antioxidant and catalytic activity to establish their potential for various biomedical applications. DLS studies revealed their size ~ 237 nm with the surface charge of ~ − 30 mV. The results of the zone of inhibition and MIC assays showed the superiority of the activity of these particles over the pod extract. Catalytic reduction of toxic p-nitrophenol to benign p-

Abstract

The rise of normal body temperature of 98.6 °F beyond 100.4 °F in humans indicates fever due to some illness or infection. Viral infections caused by different viruses are one of the major causes of fever. One of such viruses is, Chikungunya virus (CHIKV) is known to cause Chikungunya fever (CHIKF) which is transmitted to humans through the mosquitoes, which actually become the primary source of transmission of the virus. The genomic structure of the CHIKV consists of the two open reading frames (ORFs). The first one is a 5' end ORF and it encodes the nonstructural protein (nsP1-nsP4). The second is a 3' end ORF and it encodes the structural proteins, which is consisted of capsid, envelope (E), accessory peptides, E3 and 6 K. Till date, there is no effective vaccine or medicine available for early detection of the CHIKV infection and appropriate diagnosis to cure the patients from the infection. NSP3 of CHIKV is the prime target of the researchers as it is responsible for the catalytic activity. This review has updates of literature on CHIKV; pathogenesis of CHIKV; inhibition of CHIKV using theoretical and experimental approaches.

Abstract

Bacterial cell has always been an attractive target for anti-infective drug discovery. MurA (UDP-*N*-acetylglucosamine enolpyruvyl transferase) enzyme of *Escherichia coli* (*E.coli*) is crucial for peptidoglycan biosynthetic pathway, as it is involved in the early stages of bacterial cell wall biosynthesis. In the present study we aim to identify novel chemical structures targeting the MurA enzyme. For screening purpose, we used *in silico* approach (pharmacophore based strategy) for 52,026 library compounds (Chembridge, Chemdiv and in house synthetics) which resulted in identification of 50 compounds. These compounds were screened in vitro against MurA enzyme and release of inorganic phosphate (Pi) was estimated. Two compounds (IN00152 and IN00156) were found to inhibit MurA enzyme > 70% in primary screening and IC_{50} of 14.03 to 32.30 µM respectively. These two hits were further evaluated for their mode of inhibition studies and whole-cell activity where we observed 2-4 folds increase in activity in presence of Permeabilizer EDTA (Ethylenediaminetetraacetic

SHELTER BUILDING BEHAVIOUR OF *HASORA CHROMUS* (CRAMER, 1780) LARVAE (INSECTA: LEPIDOPTERA: HESPERIIDAE)

RAJESH CHAUDHARY

Reviewer: Peter Smetacek

Abstract
Larvae of many lepidopterans, including those belonging to the family Hesperiidae, construct leaf shelters. It has been indicated that these shelters confer protection to larvae from predators and harsh environmental conditions. The repertoire of shelter architectures constructed by given genera or species of Hesperiidae is fairly predictable. Thus, shelter building behaviour can also be important from the perspective of evolution. The present study provides an insight into shelter building behaviour of larvae of Common Banded Awl, *Hasora chromus* (Cramer), including various designs of shelter that larvae can make, and the role of shelters protection from predators. *H. chromus* larvae were found to construct at least four broad architectural types of shelters by folding and tying leaves. The shelters function as a barrier for arthropod predators (including wasps and spiders), and also effective in protecting larvae from avian predators too.
Keywords: Common Banded Awl, *Hasora chromus*, Hesperiidae, Larva, Ecobiology, Shelter-building, Predation, Protection.

Introduction

Larvae of lepidopterans have devised several ways to protect themselves from predators as well as environmental conditions such as solar heat, dislodgement due to shaking or wind blow (Greeney et al., 2015). Their protective strategies include chemical, physiological, morphological, and behavioural defences association with other organisms and avoiding encounters with predators by constructing shelters (Greeney et al., 2015). The latter strategy, *i.e.* shelter making, is widely utilized by larvae of Hesperiidae (Greeney et al., 2003). The larvae of this butterfly family construct shelters with a diverse array of architecture through precisely executed actions, including cutting, rolling, folding and tying a portion or whole of a leaf or several species is largely predictable, and this may be important from the point of view of phylogeny of this group of butterflies (Greeney et al., 2003, 2010; Greeney 2009). However, studies on shelter building behaviour, architectural details of shelter and its protective values (protection from predators and harsh environment) for larvae have not received much attention, particularly for Indian hesperids. In the present communication, these aforementioned aspects have been reported for Common Banded Awl (*Hasora chromus* Cramer, 1780), a common hesperid butterfly found in most parts of India. *Hasora chromus* lays eggs singly or in groups of 2-3 eggs on nascent leaves of its host plant. There are five larval instars, live in self-constructed leaf

Published online: 1 Mar. 2021

Abstract: The effects of Newtonian and Yukawa gravitational potentials are studied on the circular restricted three-body system under the assumption that infinitesimal body varies its mass according to Jeans law. The equations of motion are determined under these perturbations. The numerical studies are conducted where locations of equilibrium points, regions of motion, trajectories with Poincaré surfaces of section and the basins of attraction have been investigated by well known software Mathematica. Moreover, the stability of the locations of equilibrium points are determined and it was found that all these points are unstable.

Keywords: Attracting domain, Newtonian potential, Variable mass, Trajectories, Yukawa potential.

Abstract

The problem of estimation after selection can be seen in numerous statistical applications. Let $X_{i1}, \ldots, X_{in}$ be a random sample drawn from the population $\Pi_i, i = 1, \ldots, k$, where Π_i follows Pareto distribution with an unknown scale parameter θ_i and common known shape parameter β. This article is concerned with the problem of estimating θ_L (or θ_S), the scale parameter of the selected Pareto population under the generalized Stein loss function. The uniformly minimum risk unbiased (UMRU) estimators of θ_L and θ_S, scale parameters of the largest and the smallest population respectively, are determined. For $k = 2$, we have obtained a sufficient condition of minimaxity of θ_S and showed that the generalized Bayes estimator of θ_S is a minimax estimator for $k = 2$. Also, a class of linear admissible estimators of the form $dX_{(2)}(dX_{(1)})$ of θ_L and θ_S is found, and a sufficient condition for inadmissibility is provided. Further, we demonstrate that the UMRU estimator of θ_S is inadmissible. A comparison between the proposed estimators is conducted using MATLAB software and a real data set is analyzed for illustrative purposes. Finally, conclusions and discussion are reported.

Abstract

Antimicrobials are essential for combating infectious diseases. However, an increase in resistance to them is a major cause of concern. The empirical use of drugs in managing COVID-19 and the associated secondary infections have further exacerbated the problem of antimicrobial resistance. Hence, the situation mandates exploring and developing efficient alternatives for the treatment of bacterial and fungal infections in patients suffering from COVID-19 or other viral infections. In this review, we have described the alternatives to conventional antimicrobials that have shown promising results and are at various stages of

SUBJECTS: Metal nanoparticles, Nanoparticles, Selenium, Sodium, Students

Abstract

Nanoparticle synthesis is an important area of nanotechnology and has been performed by undergraduate students frpm various universities across the globe. Due to the availability of massive data on the synthesis of a wide variety of metallic nanoparticles, including silver, gold, selenium, zinc, copper, iron, palladium, platinum, titanium, etc., and their oxides, it has become tedious to select an ideal and workable protocol for their synthesis. Herein, we have focused on the standardized chemical and biological methodologies to prepare selenium nanoparticles (SeNPs or nanoselenium). Chemical methods exploit chemicals such as sodium selenite (Na_2SeO_3) and reductants (L-ascorbic acid, glutathione, etc.), along with stabilizing agents (Polysorbate 20, protic acid, lysozyme). Although these methods have been used for commercial purposes, they suffer from several drawbacks such as the use of excessive additives for controlled morphology, multistep synthesis, high running cost, and environmental toxicity. Biogenic synthesis using plant materials and microorganisms (algae, fungi, yeast, bacteria, and viruses), on the other hand, is a sustainable, environment-friendly, and cost-effective approach. The natural reducing agents facilitate the conversion of selenium salts into nanosized selenium particles in a single step and act as capping and stabilizing agents, which impart synergism in biological activities. Physical methods such as hydrothermal, irradiation, pulsed laser ablation, etc., have also been used for their production; however, high cost, stringent conditions, and high energy consumption have hampered their applications. Herein, we present a step-by-step methodology using chemical and biological reducing agents to synthesize selenium nanoparticles which will assist the undergraduate learners in selecting a well-tested method based on the conditions of an experiment and desired applications.

Abstract

Low molecular weight branched polyethylenimines (LMW bPEIs) are almost nontoxic but display poor transfection efficiency due to lack of adequate complexation ability with nucleic acids followed by transportation across the cell membrane. Here, a series of amphiphilic retinoyl-bPEI conjugates (RP-1, RP-2 and RP-3) has been synthesized by allowing the reaction between bPEI (1.8 kDa) and a bioactive and hydrophobic vitamin A metabolite, all-*trans*-retinoic acid (ATRA), in varying

Abstract

Thirteen new fluorine-containing drugs, which have been granted approval by the US Food and Drug Administration (FDA) in 2020, are profiled in this review. Therapeutic areas of these new fluorinated pharmaceuticals include medicines and diagnostic agents for Cushing's disease, neurofibromatosis, migraine, Alzheimer's disease, myelodysplastic syndromes, hereditary angioedema attacks, and various cancers. Molecules of these approved drugs feature aromatic fluorine (Ar-F) (11 compounds), aromatic Ar-CF_3 (1), aliphatic CHF (1) and CF_2 (1) groups. For each compound, we provide a spectrum of biological activity, medicinal chemistry discovery, and synthetic approaches.

Abstract

The moonlighting protein, Prdx-6, exhibits peroxidase activity, phospholipase activity, and lysophosphatidylcholine acyltransferase (LPCAT) activity. Although it is ubiquitous in expression, its level is prominently high in the lung. Prdx-6 has been known to be an important enzyme for the maintenance of normal lung physiologies including, anti-oxidant defense, lung surfactant homeostasis, and cell signaling. Studies further unveiled that the altered activity (peroxidase or ai- PLA2) of this enzyme is linked with various lung pathologies or diseases. In the present article, we attempted to address the various pathophysiologies or disease conditions (like lung ischemia, hyperoxia, lung cancer, emphysema, and acute lung injury) wherein Prdx-6 is involved. The study implicates that Prdx-6 could be used as a common drug target for multiple lung diseases. Important future insights have also been incorporated.

ABSTRACT

Introduction

Biomolecules associated with pollen-stigma interaction

Major biochemical events during seed development

Signaling and enzymatic actions leading to oil body (OB) mobilization during seed germination

ABSTRACT

Sunflower (*Helianthus annuus* L.) is one of the major oilseed crops cultivated world over for its high-quality oil rich in linoleic acid. It also has established applications in pharmaceutical and biotechnological industries, mainly through recombinant production of unique oil body (OB) membrane proteins-oleosins, which are used for producing a wide variety of vaccines, food products, cosmetics and nutraceuticals. The present review provides a critical analysis of the progress made in advancing our knowledge in sunflower biology, ranging from mechanisms of pollen-stigma interaction, seed development, physiology of seed germination and seedling growth under salt stress, and finally understanding the signaling routes associated with various biochemical pathways regulating seedling growth. Role of nitric oxide (NO) triggered post-translational modifications (PTMs), discovered in the recent past, have paved way for future research directions leading to further understanding of sunflower developmental physiology. Novel protocols recently developed to monitor temporal and spatial distributions of various biochemicals involved in above-stated developmental events in sunflower, will go a long way for similar applications in plant biology in future.

Abstract

The changing global climate affects the agroecosystem making it challenging to achieve the world's sustainable development goals. Among the facets of belowground microbial communities, the arbuscular mycorrhizal fungi (AMF) hold an important place. They represent the most common symbiont phylum colonizing more than 80% of the plant families and are likely to be affected by global climate change. These fungi facilitate plant's mineral acquisition, improving growth and protecting them from biotic and abiotic stresses. The elevated carbon dioxide (eCO_2) level, temperature, increased nitrogen and phosphorus deposition influences the plant phenology and AMF functioning through changes in diversity and community composition of AMF. The interaction effects of soil management practices due to climate change affect the system productivity and perturb mineral cycling. Understanding the carbon and nitrogen cycling of an agro-ecosystem and its associated AMF communities concerning ecosystem productivity is the need of the hour. Plant-fungal associations require a

Al_2O_3/CuI/PANI nanocomposite catalyzed green synthesis of biologically active 2-substituted benzimidazole derivatives†

Check for updates

Sahil Kohli, [ab] Garima Rathee, [a] Sunita Hooda *[b] and Ramesh Chandra *[a]

Author affiliations

Abstract

This work is generally focused on the synthesis of an efficient, reusable and novel heterogeneous Al_2O_3/CuI/PANI nanocatalyst, which has been well synthesized by a simple self-assembly approach where aniline is oxidized into PANI and aniline in the presence of KI also acts as a reductant. The nanocatalyst was well characterized by XRD, FTIR, SEM, EDX, TEM, BET and XPS techniques. In this study, the fabricated material was employed for the catalytic one-pot synthesis of 2-substituted benzimidazoles *via* condensation between *o*-phenylenediamine and aldehydes in ethanol as a green solvent. The present method is facile and offers several advantages such as high % yield, less reaction time, and no use of additive/bases. Also, the catalyst showed better values of green metrics including low E-factor: 0.17, high reaction mass efficiency: 85.34%, high carbon efficiency: 94%, and high process mass intensity: 1.17.

Abstract

Aedes aegypti management is a global concern due to the absence of medication and effective vaccines. The pesticide mediated health hazards and rising insecticide resistance in mosquitoes have aggravated the issues. As graphene Oxide (GO) based nanoformulations are considered a novel mosquito management strategy; the present investigation evaluated the efficacy of GO based nanoformulations conjugated with malathion (ML) and endosulphan (EN) against *Ae. aegypti*. The GO was synthesised by Hummers' method and was confirmed by UV visible spectral analysis. The GO ML and GO EN binary mixtures (1:1 and 1:2) were assayed for toxic potential against mosquito larvae as per WHO protocol and the dead larvae were scrutinized for morphological deformations/abnormalities. The contact irritancy potential of GO nanoformulations was also evaluated against adult *Ae. aegypti*. The UV visible spectrum of GO showed a narrow and high peak at ~300 nm corresponding to an n-π^* plasmon peak. The GO insecticide binary mixtures augmented the ML and EN toxicity by 80.43% and 6.43 fold, respectively. The GO ML mixture exposed larvae revealed cuticular deposition of black soot while larvae exposed to GO EN exhibited disintegrated gut viscera. GO insecticide combinations increased flights in *Ae. aegypti* denoting irritant potential. The effectual toxic, abrasive and irritant activity of GO insecticide nanoformulations recommends developing graphene based toxicants for mosquito management

Highlights

- Bioaccumulation of antibiotics like Levofloxacin in the environment is a cause of global concern.
- Maximum studies are carried out on adsorption and AOPs mainly photocatalytic degradation.
- Several photocatalysts exhibited up to 100% degradation of LEV making photocatalytic degradation the best method
- Biological degradation which may prove to be the most environment friendly is less reported for LEV removal.
- Hybrid techniques reserve a great scope of future research in the field.

Abstract

Bis(indolyl) methane (BIM) derivatives have shown numerous biological properties which has influenced the scientific fraternity to explore the length and breadth of their synthesis. Mostly, the procedure involves a catalytic electrophilic substitution reaction of indoles with various aldehydes and ketones. However, many variations have been applied from time to time to promote this reaction under green conditions. The use of water as a solvent in organic synthesis, has gained much attention due to economic and eco-friendly reasons. It has also been observed that the reactions under aqueous conditions have shown high reactivities and chemo-selectivity, which are not found in organic media. "In water synthesis" of BIMs has gained considerable recent importance and several methods have been developed. Thus, in this review we have summarized different synthetic protocols used to prepare BIMs under aqueous conditions in the last fifteen years.

A DFT Study of Interaction of $(CdSe)_3$ Quantum Dots with Nucleobases

Document Type : Research Article

Authors
Pragati Malik Rita Kakkar

https://doi.org/10.5185/amlett.2021.081653

Abstract
Deoxyribonucleic acid (DNA) and ribonucleic acid (RNA) play important roles in the storage of genetic information and protein biosynthesis. Nucleobases, which are nitrogenous bases, are the functional units of these nucleic acids. It is very important to detect changes in the sequence of DNA/RNA, as any mutations in them may cause harm to the organism. Our aim is to verify the use of $(CdSe)_3$ Quantum Dots (QDs), owing to their distinctive optical and electronic properties, for sensing changes in DNA/RNA. Hence, in this work, we have focused on studying the interaction between $(CdSe)_3$ QDs and the five nucleobases (adenine, guanine, cytosine, thymine and uracil) at various probable sites by means of density functional calculations. Several structural, electronic and optical properties, and charge transfer on interaction between the two, have been discussed. The present band gap and charge transfer calculations indicate that binding of $(CdSe)_3$ to guanine is strongest and is weakest with uracil. The vibrational spectral analysis indicates that the intensities of the peaks due to $(CdSe)_3$ enhance on interacting with the nucleobase, and a blue shift is observed in all the interactions. The presence of both the frontier orbitals (HOMO and LUMO) on the QD indicates that $(CdSe)_3$ acts as a guardian of DNA and prevents it from damage. Hence, our studies direct that CdSe QDs can be successfully employed as sensors for these nucleobases.

Size-dependent structural and electronic properties of stoichiometric II–VI quantum dots and gas sensing ability of CdSe quantum dots: a DFT study

Jyoti Singh, Rakhi Thareja, Pragati Malik & Rita Kakkar

Journal of Nanoparticle Research **24**, Article number: 33 (2022) | Cite this article

350 Accesses | **1** Citations | Metrics

Abstract

The structural, electronic, and quantum confinement effects observed in II–VI quantum dots have been described using density functional theory. Various properties like binding energy, Fermi energy, charge distribution, and band gap of various clusters have been determined as a function of cluster size in order to find out the most stable of all the clusters considered. The binding energies are found to be a function of the cluster size but converge to a maximum. Cadmium is observed to possess a larger tendency to form clusters with higher coordination numbers compared to zinc and mercury. In mercury sulfide $(HgS)_n$, the clusters with $n = 6$ and 13 get dissociated into two graphene-like parallel layers. The adsorptions of single gas molecules on the $(CdSe)_{13}$ quantum dots are exothermic, indicating that most of the gas molecules adsorb spontaneously on the CdSe quantum dots. Among the various gases, O_2 and NO_2 are the gas molecules that get most strongly chemisorbed. The CdSe quantum dot acts as an electron donor when it interacts with the oxidizing gases, O_2, CO, NO_2, and SO_2 gases. The vibrational analysis of the combined systems indicates that the intensities of the peaks due to

Abstract

The report presents the fabrication and application of a highly versatile, magnetic and robust iridium based photoredox nanocatalyst. Herein, $Ir(PPy)_3$ based photocatalyst sites have been chemically engineered over the magnetic nanoparticles to encompass the captivating features of homogeneous iridium photocatalyst with the magnetically recyclable core. A household photoreactor was designed and fabricated to achieve highly selective visible light driven oxidative C-H arylation and C-H cyanation under sustainable and ambient reaction conditions utilizing the Ir@PyBz@ASMNPs photoredox nanocatalyst. The environment friendly Ir@PyBz@ASMNPs shows excellent photocatalytic activity, broad substrate adaptability and outstanding recyclability compared to the analogous homogeneous catalysts. Indeed, the Ir@PyBz@ASMNPs possess some key features including high surface area, high iridium metal loading and excellent stability. This work is expected to enlighten and provide new insights in the rational design of high performance and recoverable photoredox nanocatalyst through surface engineering strategy.

Abstract

With the advancements in materials engineering, unprecedented newer materials based on magnetic MOFs have emerged as one of the promising candidates in the strategic field of catalysis. Within this perspective, the present report unveils the fabrication of an intricately designed magnetic $CoFe_2O_4$/Ni-BTC based MOF composite *via* a one-pot solvothermal approach. The synthesized composite was comprehensively characterized using various analytical tools

***Abstract*—An issue of critical interest in complex network analysis is the identification of key players or important nodes. Centrality measures quantify the notion of importance and hence provide a mechanism to rank nodes within a network. Several centrality measures have been proposed for un-weighted, un-directed networks but applying or modifying them for networks in which edges are weighted and directed is challenging. Existing centrality measures for weighted, directed networks are by and large domain-specific. Depending upon the application, these measures prefer either the incoming or the outgoing links of a node to measure its importance. In this paper, we introduce a new centrality measure, *Affinity Centrality*, that leverages both weighted in-degrees as well as out-degrees of a node's local neighborhood. A tuning parameter permits the user to give preference to a node's neighbors in either incoming or outgoing direction. To evaluate the effectiveness of the proposed measure, we use three types of real-world networks - migration, trade, and animal social networks. Experimental results on these weighted, directed networks demonstrate that our centrality measure can rank nodes in consonance to the ground truth much better than the other established measures.**

***Keywords*—Centrality; weighted network; directed network; migration network; world input output trade network; community structure**

I. Introduction

Data analysts from diverse domains represent relationships online social networks [12], [25], detecting influential criminals [9], performing resilience analysis of power grid networks [13], locating key areas of activity in the urban infrastructure of a city [1], and traffic sampling for intrusion detection [28].

Several centrality measures have been formulated to quantify the notion of central nodes in un-weighted/ weighted, un-directed networks and are surveyed in [7], [3], [4], [5]. However, quantification of node centrality is more challenging in complex weighted and directed networks due to the dynamic effect of weighted reciprocal links on its computation. Very few measures exist for such networks, and the area remains under-explored.

A. The Problem and Motivation

PageRank (PR) proposed by Brin and Page to rank web pages is a popular and effective centrality measure [20], and there exist variations and extensions of PR for weighted, directed networks [27], [30]. These measures quantify the importance of a web page by iterative counting of the number and quality of its incoming links. The underlying assumption is that more important web pages have more *incoming* links from other central web pages. The problem is that this assumption, though correct for web pages, may not be valid for other domains. For example, in the migration networks, a state's

Abstract

Digital India is seen as the engine for transition of India into an empowered nation. In this direction, several pro-people initiatives like MyGov, Digilocker, e-basta, and e-hospital are being implemented. Through a self-structured survey questionnaire, the study evaluates awareness about, implementation and utilisation of various e-services offered under the Digital India Program among Delhi University students. It examines the extent to which the services are being utilised and main barriers/challenges restricting its utilisation. The data has been analysed using ANOVA. The study reveals a high level of awareness among students. They believe it will improve the quality of services leading to good governance. Major factors restricting its implementation include lack of computer knowledge, fear of frauds and resistance to change. The study stressed on educating people about the benefits and usage of Digital India. The nation as a whole can move towards green and responsible governance by improving its acceptability.

Intensity quantification of public opinion and emotion analysis on climate change

Tishya Thukral[1], Ashwani Varshney[2] and Vibha Gaur[1]*
Department of Computer Science, Acharya Narendra Dev College, University of Delhi, India[1]
Department of Computer Science, University of Delhi, India[2]

Received: 13-July-2021; Revised: 09-October-2021; Accepted: 13-October-2021

Abstract

Human-related activities are primarily accountable for climate change resulting in natural disasters. Therefore, it has become essential to analyze and evaluate public awareness of climate change globally. With the prevalence of social networks like Twitter, sentiment classification has been recognized as a powerful tool to determine public opinion and concern on such ecological issues. Therefore, this study proposes a framework to classify the tweets containing public opinion towards climate change using Bi-directional Long Short-Term Memory (Bi-LSTM) Networks. The proposed framework quantified the intensity of the public opinion classified by the Bi-LSTM model to measure the strength of the public concern towards climate change and validated it using three case studies: Earth Day, Delhi Air Pollution, and Australian Bushfires. The intensity values of the public sentiments concerning these events were obtained as 98.50%, 96.57%, and 98.33%, respectively. The proposed work was further augmented with a lexicon-based emotion analyzer to categorize the emotions associated with the tweets into positive, negative, neutral, and mixed to substantiate the results. This framework can be utilized before enforcing the policy decisions on the general public in any domain.

Keywords

Bi-LSTM networks, Sentiment analysis, Global warming, Social networks, Climate change.

1.Introduction

The large-scale shift in the weather patterns due to intensified global warming is becoming a severe issue globally with constant evolving outlooks. Rising temperatures, melting of glaciers, and changes in weather patterns are some of the indicators of climate change. Increased human emissions on the Therefore, developing appropriate learning techniques to analyze and evaluate public awareness of the critical issues has become an absolute necessity for a promising future. For example, there have been instances of mass protests during the implementation of acts such as the Citizenship Amendment Act of (CAA) 2019 [4] and Farm Bills

Abstract

In this paper, policies of optimal ordering has been focussed on economic order quantity (EOQ) model, where we considered deteriorated as well as non-instantaneous nature items. In this inventory model, we are also assuming there is a stock-dependent demand and constant holding cost. Occurrence of shortage during the complete process of the system, taking into consideration with partial backlogging where deterioration of items follows the Weibull distribution. In the present study, it is considered that the supplier's proposed lucrative trade credit offers to the retailers to buy more to generate more revenue. Numerical examples parallel to the present inventory model gives an optimal result. Lastly, sensitivity analysis applied to different parameters and graphical representations have shown to validate the model.

Abstract

Mosquitoes serve as the major vector transmitting malaria, dengue, yellow fever and several other diseases of human concern. Rising in mosquito-borne diseases and consequent fatalities throughout the world has made the management of mosquitoes of paramount importance. With the use of various insecticidal agents and their indiscriminate application in the fields for vector control; other issues such as multiple insecticide resistance, lethality to non-specific targets and adverse effects on human and environmental health have emerged making the situation more critical. Hence, the focus of researchers has diverted to the use of Insect Growth Regulators (IGRs) that affect the growth and development of the insects without inducing any appreciable toxic effects. The paper comprehensively reviews various IGRs and their potential use against insect pests and mosquito vectors. A special emphasis has been laid on the utilization of diflubenzuron, its larvicidal potency and growth regulatory effects against mosquitoes. The paper also delivers a detailed discussion on various approaches governing with the application of diflubenzuron. a chitin synthesis inhibitor, for its potent effects over a wide range of other insect species, low toxicity to humans, safety to other non-target animals, negligible deleterious environmental impact along with the possible

Abstract

Increased production of antioxidant herbal supplements utilizing traditional medicinal plants has been attributed to a high margin of economic effectiveness, environmental friendliness, and accessibility. Current investigations determined the antioxidant properties of leaf and stem extracts of five plants, *Oxalis corniculata*, *Argemone mexicana*, *Thevetia neriifolia*, *Acacia karoo* and *Cassia fistula* using DPPH radical scavenging activity, Xanthine oxidase (XO) inhibition and Superoxide scavenging activity. Based on the individual extract activity, different binary formulations were prepared and assayed for their antioxidant properties to identify the most promising combination. The *A. mexicana* and *A. karoo* leaf extracts showed maximum DPPH activity while highest XO inhibition was induced by *A. mexicana* leaf extract (IC_{50} = 6.849 ± 1.502 µg/mL) followed by the *T. neriifolia* stem extract (IC_{50} = 10.366 ± 0.1.322 µg/mL). Superoxide (SO) scavenging effect of all the extracts was significantly higher in comparison to the control. The combinations of *A. mexicana* and *A. karoo* leaf extracts in 2 : 1 and 3 : 1 ratios; and that of *C. fistula* and *A. karoo* stem extracts exhibited synergistic antioxidant effects in comparison to the individual extracts. The antioxidant activity increased

Abstract

During our previous investigation, bioactive compounds present in the extract of *Streptomyces* sp. strain 196 were characterized using LC–MS/MS and ^{1}H NMR studies. These compounds were K-252-C aglycone indolocarbazole alkaloid, decoyinine, and cycloheximide; the study of these natural drugs against lung carcinoma is still limited. Focus of the current investigation was to study the anticancer effect of strain 196 extract on lung cancer cells (A549). During in vitro studies, anti-proliferative effect of extract was studied using MTT assay in A549 cells. Effect of extract on cell survival was further evaluated using colony assay. Cell death was qualitatively assessed using apoptosis assay. The aftereffect of extract treatment on metastatic potential of cancerous cells was studied using wound closure assay. Effect of extract on the morphology and cytoskeletal arrangement of A549 cells was studied using phalloidin staining. The extract demonstrated concentration and time-dependent cytotoxicity with IC_{50} value at 0.5 mg/ml (6 h) and 0.15 mg/ml (24 h). The proliferation and metastatic potential of

The floristic composition of Delhi has changed significantly during past one and half centuries (Maheshwari, 1963; Anonymous, 1991). Several non-native plant species have been introduced for afforestation and beautification of gardens and parks (Maheshwari, 1963). In addition, the city has also witnessed an increased plantation of vegetable and fruit plants (Maheshwari, 1963). Factors such as change in floristic characteristics, appearance of new microhabitats, change in land use and climate change, alone or in combination can cause an alteration to the butterflies species diversity in a geographical area (Kwon *et al.*, 2021; Mukherjee *et al.*, 2019).For instance, in Delhi, a few species of butterflies,such as Common Jay (*Graphium doson* C. & R. Felder, 1864), Red Pierrot (*Talicada nyseus* Guérin-Méneville, 1843) and Plains Cupid (*Chilades pandava* Horsfield, 1829),that are fairly common at present, werenot recordedby previous workers (Donahue, 1967; Larsen,2002). These butterfly species are thought to have been introduced in Delhi duringthe last two decades along with their host plants, which have ornamental value. Also, species which were once considered extremely rare in Delhi such as the Common Lineblue (*Prosotas nora* C. Felder, 1860) and 2019; 2020).Besides these, there is a recent record of the Common Grass Dart (*Taractrocera maevius*) (Madan & Dey, 2018) that had not been reported previously from Delhi.In the present communication, we report sightings of the Tailless Lineblue (*Prosotas dubiosa*) from various parts of Delhi and its vicinity.

Two individuals of the Tailless Lineblue were sighted in the Sanjay Van area (28° 31′ 48″N, 77° 10′ 15″E) of South Delhi during thelate morning on2.x.2021 (Figure 1).Both the individuals were found puddling together on a footpath. These were observed for about 10 minutes and photographed. Another individual of this species was sighted and photographed on the morning of 13.x.2021, basking on a tree inthe R. K. Puram area (28° 33′ 20″N, 77° 10′ 49″E) of New Delhi. It is noteworthy that this butterfly species was also sighted by us on 14.x. and 16.x.2021 (two individuals each day) in Aravalli Biodiversity Park, Gurugram, Haryana (28° 28′ 56″N, 77° 06′ 39″E).Therefore, it islikely that the Tailless Lineblue is present in other parts of Delhi-NCR as well.

To the best of our knowledge, the Tailless Lineblue has not been reported previously from Delhi (Donahue, 1967; Larsen, 2002) or

SIGHTING OF PLAIN TIGER (*DANAUS CHRYSIPPUS* LINN., 1758) FORM *DORIPPUS* IN NEW DELHI, INDIA

Four forms of *Danaus chrysippus* are known from India, viz. *chrysippus, alcippoides, amplifascia* and *dorippus* (Smetacek, 2001). The first form is the most common in the country whereas sighting of the other three forms are rare (Smetacek, 2001). The form *dorippus*, known to be a common form in Africa, is sighted only rarely in India (Smith *et al*., 1997; Smetacek, 2001). This form is
